SIR—The English Secretary of the Japan Peace Society, Mr. Gilbert Bowles, has sent me your recent letter in which you request him to secure for you expressions of opinion concerning the attitude of Japan toward Australia. You state that a campaign is being carried on by the Melbourne press charging Japan with designs on the integrity of your country. Of course, I cannot speak with the authority of the Japanese gentlemen or the distinguished foreign residents here who will be asked to favor you with their opinions, but as an American editor who is familiar with the peace movement in the United States, having been President of the Third American Peace Congress held in Baltimore last May, my testimony may not be without some value.

I am now about to return to the United States after an eight weeks' sojourn in Japan, including a two weeks' trip to Korea and

Manchuria. My sole purpose in coming here was to discover all I could in the time at my disposal of the foreign policy of Japan, especially as far as it might affect the world's peace. I have talked with all classes of people on this subject: statesmen, financiers, merchants, foreign business-men, missionaries, educators, fellow-journalists, etc., etc. I have taken especial pains to inquire of those who are most critical of Japan's foreign policy. It may interest Australian people to know that not a soul has ever yet mentioned the word Australia to me in any connection whatsoever. A few alarmists in America have warned our people that Japan was ready to land an army in California and proceed to seize the Rocky Mountain fastnesses. Periodically when our naval bills are under discussion, Japanese spies are reported to be secretly photographing the army mules and other military secrets in Manila and Honolulu. That Australia should join the "charmed circle" of nations about to be absorbed by Japan would seem to show either that yellow journalism is flourishing in your great commonwealth like the rabbits or else that the international battleship and ordnance trusts are extending their operations to the Antipodes.

It is perfectly evident to any visitor here that Japan is leaving no stone unturned to strengthen her friendship with Great Britain. The Anglo-Japanese Alliance has probably done more for the peace and stability of the Far East than any act of statesmanship in which Japan has had a share. The idea is inconceivable that she should cherish any sinister designs on any British colony.

Permit me to add that it is my firm belief that there is no nation in the world today more sincerely desirous of peace than Japan. Doubtless she would go to war like any other nation to preserve her national integrity. But the belief that she is deliberately planning aggression on any people in the world will not stand the test of the most superficial investigation.

The task of furthering her remarkable educational, commercial and industrial development at home and assimilating Korea and Formosa, are absorbing all her thought and draining her resources. She desires above all else the maintenance of peace in order that she may bring to the highest success these laudable endeavors. Australia needs no navy or universal conscription to save herself from Japan.

I am, etc.,

(Signed) HAMILTON HOLT.

From the time when Commodore Perry opened Japan to the United States in 1852 until today there has been no single instance, except the Shimonoseki affair of 1863, when Japan has done anything to give the slightest offense to the United States. On the contrary, Japan has done everything in her power to show her gratitude and affection for us. She has modeled her educational system after ours. She has

A JAPANESE CONEY ISLAND

The theatrical hall and bowling alleys at Fushemedai Electric Park, Dairen

sent her brightest young men to be trained in our universities. She has employed Americans as advisors, teachers and administrators in all departments of endeavor. Even at this minute she is employing Mr. Dennison as advisor of the Foreign Office—an American citizen who necessarily knows the innermost secrets of Japan's foreign policy. Incidentally it is worth stating that Mr. Dennison has always had an understanding with Japan that he would return home should there ever be trouble between Japan and the United States. He has not yet asked for his release.

The United States had an equally unblemished record for cordiality toward Japan until the close of the Russo-Japanese War. Then for some reason there was a change. First, inspired statements began to appear in the press that we would have to fight Japan—no one knew exactly why—but they were getting “cocky,” as a result of their victories over Russia, and needed to be “taught a lesson.” Furthermore, the English and German war scares were experiencing the law of diminishing returns, and our armament syndicates and Admirable Mahans had to conjure up new dangers against which we should need a great navy. Then came the California law segregating the Japanese in the schools as if they were not fit to associate with white children. That stirred up Japan to strong protest, but it ended in the Japanese Government

stopping all emigration to this country, so that even students find it difficult to come here today. Then President Roosevelt sent the fleet on its gastronomic voyage around the world, ostensibly for a cruise, but in reality to “impress” Japan. Japan turned the other cheek by spending a million dollars to entertain it. She has shown similar hospitality to our delegations of merchants and others who have visited the islands. But the pin-pricks continued. The cheap politicians began to introduce bills in the California Legislature to prohibit the Japanese from the Pacific Coast and to prevent those already there from owning land or engaging in business. Next came the report that Japan had a secret treaty with Mexico against us and was to be allowed a Pacific port. There were the reported speeches of a member of Congress, formerly in the navy, declaring that Japan was waiting the near time to declare war and seize the Philippines and the Hawaiian Islands. Then came Secretary Knox's proposal for the neutralization of the Manchurian railroads, which appeared to Japan to seek to deprive her of rights she had gained by the treaty of Portsmouth and to destroy her preponderant influence in the border State which faced her Korean frontier. Next appeared a scheme for American capitalists to build the Chin-chow-Aigun Railway to rival the South

THE YAMATO HOTEL AT FU-SHUN

One of the South Manchuria Railway's modern hotels in Manchuria for the use of foreign travelers.

Manchurian Railway in China, followed shortly by the extraordinary proposal from bankers, originating here, that four Powers, the United States, England, France and Germany, should loan China \$50,000,000, the interest to be guaranteed by all the unhypothecated resources of Manchuria; and the provision added that China should go to these four nations for any future loans, thus dethroning Japan from her primacy in Manchuria and all China. Tho the Knox neutralization plan and the American railroad scheme fell thru, and the bankers controlling the four Power loan have since invited Japan and even Russia to join their circle, these proposals made a very bad impression in Japan. Our position in respect to Manchuria is very much the same as tho Japan went to Mexico and said: "See here, Mexico, the United States has a good deal of money invested within your territory. It is a menace to your integrity. We suggest that you let us raise a loan, so that you can pay back the United States what you owe her and then tell her to get out. You can come to us only for all future loans." If such a proposition were made by Japan to Mexico nearly every editor in the United States would be shrieking for war. But the Japanese are a very self-controlled people. They said very little. They feel, however, that they have the same rights in Asia that we

claim to have in this hemisphere under the Monroe Doctrine, i. e., the inalienable right to take any course requisite for self-preservation.

And now, since the first of the year, a measure known as the Dillingham bill was favorably reported to the Senate by the Committee on Foreign Relations, which would have excluded the Japanese from our shores as the Chinese are now excluded. I am happy to believe that THE INDEPENDENT had not a little to do with exposing the "joker" in that bill and causing its sponsors forthwith to repudiate it. Finally, when Japan learned that we were preparing to negotiate an unlimited arbitration treaty with Great Britain, she voluntarily consented to a modification of the Anglo-Japanese alliance, so that in case Japan and the United States were at war Japan would not have the right to call her ally, England, to aid her and thus make England choose between breaking the alliance with Japan or the proposed peace treaty with us. Surely this clearly indicates that Japan never expects trouble with the United States. And if that is not sufficient evidence of Japan's friendliness, it is a fact that Japan cannot afford to fight us even if she wants to. The country is taxed to death to pay for the aftermath of the Russo-Japanese War. Millard says that before the war taxes were six yen per capita, during the

war they were raised to fifteen yen, and they are to be kept there for the next thirty years. He computes that the lower classes pay 65 per cent. of their income in taxes, and he avers that from 1898 to 1908 population increased 8 per cent., average increase of earnings 30 per cent., and taxes 400 per cent. In addition to this, the United States is the best customer Japan has in all the sisterhood of nations. We purchase much more of Japan's foreign exports than any other nation, and she purchases from us more than any nation except England, India and China. If that trade were stopped by a war Japan would go bankrupt within six months.

In view of all this, it is a national disgrace that a few of our blatant politicians and yellow journals continue to slander Japan and her motives, when it is as clear as day that she is doing everything possible to foster good relations with us. Even now her feelings are only of the friendliest. She will do anything we ask of her, provided only she can do it with dignity.

As I write this sentence, a letter comes to me from Madame Yei T. Ozaki, the

wife of the Mayor of Tokyo, announcing that 3,000 young cherry trees, designed as a present for the American people from the Japanese people, are on their way here. Mayor Ozaki has had these trees prepared in especially disinfected soil, so that there will be no danger of bringing in any disease, as was the case with those which were sent before and had to be destroyed. Do the American people realize that the pink cherry blossom is the most beloved flower in the Land of the Rising Sun? It typifies the spirit of Japan. No more poetic gift could have been made to America by the great nation across the Pacific.

The first sentence of Commodore Perry's famous treaty with Japan, signed on March 31, 1854—the first treaty ever negotiated by Japan with a foreign power, reads as follows:

"There shall be perfect, permanent and universal peace and a sincere and cordial amity between the United States of America on the one hand and the Empire of Japan on the other and between their people, respectively, without exception of persons and places."

From that day to this Japan has lived up to the letter and spirit of that treaty.

NEW YORK CITY.

Wrecked

BY JOSEPHINE E. TOAL

BEAUTIFUL at early morn,
Fair and fresh a garden lay;
Fragrant flowers, newly born,
Smiling, spread their petals gay.
Tempest-swept, the close of day
Saw a wreck, a ruin wild—
Blossoms torn and soiled with clay.
"Oh, my lilies!" sobbed a child.

Sailed a ship on waters wide,
Staunch of build, superb of parts,
Bearing out upon the tide
Fondest hopes of eager hearts
Wrecked in sight of foreign marts,
On the wave her cargo tossed;
Frail the might of human arts—
Brave men mourned for fortunes lost.

Bent above a city fair
Cloudless skies in tropic clime;
Busy traffic sounded there,
There the idler's careless time,
Past at east where fountains chime,
Rent the earth and sudden hurled
Down the city in her prime—
Paused, appalled, the living world.

Forth upon life's restless sea
Fared a youth with proud craft whole;
Sailing aimless, asked not he
For the Pilot's safe control.
On the fatal, bark-strewn shoal,
Lightly marked by man, he swept;
But for shipwreck of a soul,
Angels bowed their heads and wept.

MINNEAPOLIS, MINN.

A Crisis in the Socialist Party

BY WILLIAM ENGLISH WALLING

[Mr. Walling has been a frequent contributor to THE INDEPENDENT in the past. Our readers will recall his articles on the Russian revolution and on the race question and socialism in the United States. He is now a member of the Socialist party and his latest book just from the press of The Macmillan Company, is entitled "Socialism as It Is." In view of the biennial convention of the Socialist party that opened this week in Indianapolis and which will select Presidential candidates, this article is of much timeliness.—EDITOR.]

WITH the rapid rise of industrial or revolutionary unionism, both as seen in the Industrial Workers of the World at Lawrence and elsewhere and in the Western Federation of Miners and other unions belonging to the American Federation, a crisis has been created in the Socialist and labor union movement—a crisis in which the general public is deeply involved and has, fortunately, shown a keen interest. Either the conservative Socialists have to separate from the revolutionaries now and join Gompers and the "Executive" of the American Federation of Labor, or it may be too late. Two years more of growing popularity for the Debs kind of socialism, in friendly relations with the Haywood or Tom Mann kind of unionism, and the conservative Socialists and unionists would be in a hopeless minority. So the Asiatic exclusion question has been resuscitated in order to create a gulf which no reformist or revolutionary can cross and no opportunist can straddle.

At the Chicago convention in 1910 a compromise was adopted, modeled somewhat along the lines of the anti-exclusionist position of the International Socialist Congress of Stuttgart (1907). It is now proposed by four members of the new committee appointed to report on this question to the present Indianapolis convention to rescind this action, while only two, John Spargo and Meyer London, would definitely reaffirm the Stuttgart position, and only one, the Finnish representative, Laukki, would make a still less compromising declaration.

The exclusionist argument this year is on purely racial lines. In 1910 practically all speakers, on the contrary, denied that the exclusion proposal was fundamentally racial—for to confess that it has this character is a declaration of independence against the International Socialist Congress, an act which, in itself,

would reduce the American party to a mere labor party of the Australian type. If this position is accepted at Indianapolis it means *secession from the International Socialist movement and the formation of a National Social-Democratic or Labor party*. In discussing the Socialists' attitude on this question, then, we are at once discovering where they stand on one of the world's greatest problems, and whether the internationality of the Socialist movement is a reality or exists merely on paper, and at the same time gaining the deepest possible insight into the fundamental differences that separate the so-called revolutionaries and the so-called opportunists.

Mr. Roosevelt says:

"'Advanced' Socialist leaders are fond of declaiming against patriotism, of announcing their movement as international, and of claiming to treat all men alike; but on this point, as on all others, their system would not stand for one moment the test of actual experience. If the leaders of the Socialist party in America should today endeavor to force their followers to admit all negroes and Chinamen to a real equality, their party would promptly disband, and rather than submit to such putting into effect of their avowed purposes, would, as a literal fact, follow any capitalistic organization as an alternative."

The internationalism of the Socialist movement is thus squarely challenged by one who voices the opinion of millions, and it is of the first importance to get at the truth. There can be no denying that there are many facts which would seem to bear out Mr. Roosevelt's accusation, and I shall give them first attention.

It is impossible to minimize the fact that at the American Socialist Congress in Chicago (May, 1910) more than a third of the delegates already favored legislation against Asiatic immigration framed along race lines. This anti-Asiatic movement has been so strongly endorsed by Mr. Victor Berger and his followers that he has even threatened, in a public meeting in Berlin, that the

American party in this matter was ready to defy the decisions of the international congresses. But some prominent American revolutionaries are likewise in favor of Asiatic exclusion, notably Mr. Ernest Unterman, while a number of well-known "reformist" Christian Socialists have taken a stand against it. Nevertheless, it was the "reformists" and those inclined to make of the party a sort of a Labor party of the British or Australian type, who led the exclusionists at Chicago. The matter seemed settled as fought out two years ago, and the present reopening of the question, without any new reason, threatens a split in the movement. For Mr. Eugene V. Debs and Mr. Charles Edward Russell, the only two names widely mentioned for the Presidential nomination, and others of the best known members of the party, have taken an apparently irrevocable stand against action along racial lines and in favor of maintaining the principles of the international socialism as adopted by an overwhelming majority in the congress of 1907 at Stuttgart.

The majority of the committee appointed to report on this matter to the Chicago congress supported the following propositions:

"The Socialist party, in its present activities, cannot outrun the general development of the working class, but must keep step with it. . . .

"We therefore endorse every demand made and position taken by the International Congress on this question, *except those passages which refer to specific restrictions or to the exclusion of definite races or nations.* We do not believe that such measures are necessarily 'fruitless and reactionary,' as stated by the International Congress, but on the contrary are convinced that any measures which do not conform to the immediate interests of the working class of the United States are fruitless and reactionary.

"We advocate the unconditional exclusion of Chinese, Japanese, Koreans and Hindus, not as races per se, not as peoples with definite physiological characteristics, but for the evident reason that these peoples occupy definite portions of the earth which are so far behind the general modern development of industry, psychologically as well as economically, that they constitute a drawback, an obstacle and menace to the progress of the most aggressive, militant and intelligent elements of our working class population." (My italics.)

The report was brought before the convention by its chairman, Mr. Unterman. He asked:

"Are we going to give up the splendid fight our forefathers made and voluntarily per-

mit strangers to come and take away our bread?"

—a frank expression of that nationalism against which a very large part of all Socialist effort has hitherto been directed. The same feeling was shown in his remark:

"If it ever should come to the question of whether I shall have employment, or the immigrants of any other race, I desire to tell you that so long as there are American labor unions, and so long as there is an American Socialist party, I am going to see to it that we shall have our jobs in order to live."

This assertion of a struggle of existence between races and nations is identical with that insisted upon by imperialists and militarists. Mr. Unterman said:

"As far as Asia is concerned, Asia has immense opportunities for developing an outlet. They need not come over here. Japan has Manchuria and Korea. China has vast districts which it can conquer. Let the Chinese capitalists develop Chinese society, just as the American capitalists have developed American society. Let them find room for their unemployed over there and employ them there and develop their own society. Let the Socialists of those countries organize their co-operative commonwealth themselves first, and then, when they have that organization, when they have their strong Socialist and labor organizations, *then let them talk to us about international solidarity.* . . . The Aryan race will always occupy a certain geographical territory, and what the Asiatics will do in the coming years does not concern us at present."

Mr. Unterman's position was the most extremely anti-Asiatic of that taken by any speaker at the 1910 convention, tho Berger, Hunter, Stitt Wilson, and Wanhope were not far in the rear. The Chicago Congress accepted the report, but declared:

"The Socialist party of the United States favors all legislative measures tending to prevent the immigration of strike-breakers and contract laborers and the *mass importation* of workers from foreign countries, brought about by the employing classes for the purpose of weakening the organization of American labor and of lowering the standard of life of the American workers.

"*The party is opposed to the exclusion of any immigrants on account of their race or nationality,* and demands that the United States be at all times maintained as a free asylum for all men and women persecuted by the governments of their countries on account of their politics, religion or race." (My italics.)

What is the surprise then of many Socialists to find the new committee, in spite of the wonderful events that have

intervened in China, sending to the convention now in session a new report that uses Unterman's arguments verbatim. Strange to say, the Chicago convention, which voted against the exclusionists, elected Unterman, Hunter, Stitt Wilson, and Wanhope to the new committee, and these now send in a report based on the following argument:

"Race feeling is not so much a result of social as of biological evolution. It does not change essentially with changes of economic systems. It is deeper than any class feeling and will outlast the capitalist system. It persists even after race prejudice has been outgrown. It exists, not because the capitalists nurse it for economic reasons, but the capitalists rather have an opportunity to nurse it for economic reasons because it exists as a product of biology.

"It is bound to play a role in the economics of the future society. If it should not assert itself in open warfare under a Socialist form of society, it will, nevertheless, lead to a rivalry of races for expansion over the globe as a result of the play of natural and sexual selection.

"We may temper this race feeling by education, but we can *never* hope to extinguish it altogether. Class consciousness must be learned, but race-consciousness is inborn and cannot be wholly unlearned. A few individuals may indulge in the luxury of ignoring race and posing as utterly raceless humanitarians, but whole races, never.

"Where races struggle for the means of life, *racial animosities cannot be avoided*. Where working people struggle for jobs, self-preservation enforces its decrees. Economic and political considerations lead to racial fights and to legislation restricting *the invasion of the white man's domain by other races*." (My italics.)

Here we have the familiar position and phrases of imperialists the world over and of our anti-negro agitators in the South, also an echo of Kearney in the San Francisco Sand Lots. Race feeling can "*never*" be extinguished or unlearned, race wars are inevitable, the "white man's domain" must be inviolate.

This is decidedly more reactionary than the previous report of 1910 or the position taken by its supporters in Chicago. There the exclusionists were on the defensive, now they are on the aggressive, and it would almost seem that they hope to drive Debs and Russell and the International Socialists out of the party and set up a nationalistic patriotic organization in alliance with Mr. Gompers and his conservative labor unions, who want to restrict white immigration as well as colored. Even at the Chicago

convention of 1910 the exclusionists were accused of looking in that direction. The close relation established, since then, with Gompers in Los Angeles, with John Walker and the Illinois coal miners, and with conservative union leaders in Wisconsin and elsewhere, now promise a renewal of the Labor Party idea, as seen in England and Australia. Harriman, Socialist candidate for Mayor in Los Angeles, and Walker had both left the Socialists to advocate a Labor Party, and, now that they are with the Socialists again, apparently wish to turn the Socialist Party into a similar organization.

At Chicago the Asiatic exclusionists argued that the proposed exclusion was really not on race lines at all. Mr. Unterman claimed that it was the past environment of the race that was criticised and not the race itself. He asked:

"Why should we emphasize the race? Not as a race per se, as the report says; not because the Chinaman has a slit eye, and a yellow skin; not because he wears a blouse and a queue; but because having lived in an environment which is a thousand years or more behind European civilization, he has certain qualities that make him less easily assimilable than even the lowest types of European civilization, he has certain qualities that make him less easily assimilable than even the lowest European immigrant."

At another point he asserted that Socialism could be attained without abolishing present race *inequalities* or even race *prejudice*. Like Hunter and Gomer of the Illinois miners, he blamed the negroes largely for the existing race prejudice against them:

"The question is absolutely imminent in the United States on the Western slope. Vast masses of that section are already occupied by the Chinese and Japanese, and wherever they get control they shove out the white man, and when they have crowded us out they will reward us for our sentimental attitude by giving us the kick which we deserve.

"The same with the negroes in the South. Wherever the negroes get control they stand aloof from the white men and will not work with them. In other words, there is a race feeling there that is so strong that the two races do not want to work together. They are not willing to work together, and while we stand for international solidarity and stand for rigid solidarity, *we should be false to our Socialist agitation if we insisted first on doing away with the race prejudice*." (My italics.)

Mr. Victor Berger also dwelt on the historical differences between the races:

"We are all of the same type; of the same

sort of thinking; we may fight occasionally, but, after all, our mode of thinking is very much the same. But, comrades, it is entirely different with these other races. They have their own history of about *fifty thousand years*. That cannot be undone in a generation or in two generations, or in three generations."

The hackneyed appeal to ancient history, familiar in all reactionary reasoning, whether in reference to races or any other question, the talk about the age-long period in which the history of the Asiatics has been different from ours, was adverted to by nearly all the advocates of exclusion. The phrase about it taking *three or more generations* to undo this difference of history is even stronger than that employed by Mr. Taft in refusing self-government to the Philippines, since he speaks only of one generation as being essential to bring the Filipinos to civilization. Mr. Berger, more conservative, contemplates three generations before "these other races reach our level."

The majority at Chicago swept aside all these apologies as being mere pretexts for a proposed action directed definitely against certain races. Hillquit said:

"I shall vote against the majority report, because I think it is wrong in principle—the exclusion of Asiatic races as races. True enough, they say they are to be excluded not as races *per se*; but they go on and describe the reasons why they should be excluded, and those reasons are reasons describing the condition of a certain race as a race and nothing else."

But now all claims that the proposed exclusion is not based on purely racial lines are abandoned, and all exclusion arguments are based on the supposed situation to which ineradicable racial differences supposedly lead. The whole argument is now contained in another paragraph from Messrs. Untermann, Hunter, Wanhope and Wilson:

"From the point of view of the class-conscious workers, it is irrational in the extreme to permit the capitalists to protect their profits by high tariffs against the competition of foreign capital, and at the same time connive at their attempts to extend free trade in the one commodity which the laborer should protect more than any other, his labor power."

The argument had already been answered at Chicago, and is also dealt with in the minority report of Mr. Laukki, who undoubtedly voices our unskilled and foreign-born labor. Laukki's position is

chiefly contained in the following paragraphs, and I only regret for the reader's sake that I cannot reproduce it in full:

"Every one understands that competition of Asiatic labor in America does not decide the wages and the standard of living of the American working class, but that the mode of production and distribution, the evolution of the industrial life decides it.

"If the industrial life develops in the direction that it does not need as intelligent, well fed and well educated labor power as before, the wages and standard of living will go down; capitalism will force them down either by using cheap paid foreigners or native labor, the women and children.

"And vice versa, if the industrial evolution develops in such a way as to necessitate general forward evolution of the proletariat, demands more and more intelligence, education, physical power of the working class, as we Socialists believe that it does, and upon which scientific knowledge all our hope of the future supremacy of the working class relies, in that the standard of living cannot be forced down by immigrant labor competition or otherwise. . . .

"It is the craft worker who, with his seclusion ideas, is swept aside by the industrial evolution and who, not understanding this evolution, like King Canute, tries, by all kinds of silly means, to bid the tide of evolution stay back, and so he also yells out to the wide world, 'Look here what the Asiatics do; they force down our (he doesn't say 'my') standard of living. Exclude them!' And the echo (the merely vote catchers) answers, 'Really, they force down the standard of living of the American working class. Exclude them!' And this they call scientific Socialism!

"To prove this, it suffices only to mention the fact that the common laborers in the Western States, where this Asiatic immigration is acute, in general do not join in the cry, 'Exclude the Asiatics.' They do not even given any attention to the whole question; it does not exist for them.

"The same applies to foreigners, at least to the Finnish laborers working in the Pacific Coast mines, saw-mills, lumber camps and as fishers. They haven't any such silly ideas that especially the Asiatics lower the standard of living of the American working class."

Government, the revolutionaries reason, is and must remain wholly capitalistic until Socialists have won the supreme power or are about to do so. If Asiatics are now excluded, it is because the chief opposition has come from the small capitalists, shopkeepers and farmers who are the backbone of the present State governments on the Pacific Coast. As Mr. Will Irwin showed in *Collier's Weekly*, the opposition of this element to the Japanese is far more extreme and effective than that of the labor unions. It is they, for example, who demand that Asi-

atics shall not be permitted to own land—a proposition endorsed even by “insurgents” like William Kent, and it was they, more than the unions, that brought on the dangerous friction between America and Japan on the question of exclusion of Asiatics from the public schools.

At Chicago the exclusionists felt so bitterly on this question that they even declared:

“The principle of national autonomy prevents the International Congresses of the Socialist party from laying down specific rules for the carrying out of the general principles recognized as valid by all Socialists.”

Mr. Berger definitely threatened that, were it a bread and butter question, he and the American party would pay no attention to the decisions of the international organization.

At Chicago the compromise proposed by Hillquit, which opposed “the mass importation” of laborers, using the expression of the Stuttgart resolution, was finally adopted. And it was made clear by several supporters of the compromise that it would allow opposition to the present Asiatic immigration on this non-racial ground (or pretext). But this did not satisfy Berger, who said:

“Now, I don’t agree with my friend Hillquit this time; in most cases I do. Now, in the first place, I do not believe in hiding behind any evasion. I believe with Ferdinand Lassalle that in great things it is a mistake to be sly. I was never sly in my life. Are you going to hide behind contract labor on this question? We do not mean contract labor. We know that the Chinese coolie laborer is just as dangerous whether he comes in with a contract or without. That is hiding behind a phrase. That is trying to hide behind a phrase and being a good fellow.”

And now we have the same element coming back to the Indianapolis convention more aggressive and confident than ever, and demanding exclusion definitely on the ground of race; and the atmosphere is surely laden with electricity if any atmosphere ever was. Under these conditions it is worth while to examine the motives of the militant exclusionists as disclosed in Chicago, as they will doubtless be the same at Indianapolis.

It was asserted by many of the most active delegates that the only possible purpose for pressing the question at that time, when Asiatic immigration was not a political issue, must have been to cater to the non-Socialist unions of the Ameri-

can Federation of Labor. Mr. Merrick, of Pennsylvania, remarked:

“I say there are two ways of forming a labor party in this country. One way is to organize it on the pattern of the American Federation of Labor. Another way is to come into this Congress and so to modify and qualify the Socialist program that it will be acceptable to ‘Sam’ Gompers and John Mitchell.”

Mr. Killingbeck, of New Jersey, made almost an identical statement:

“Let us be honest with ourselves and say that we want a political victory, and in order to get that victory we must have the co-operation of the American Federation of Labor, and say to them: ‘We are willing to have you dictate to the Socialist party just what we shall do, so that we can make other cities and States as famous as Milwaukee!’”

Another expression of the view that finally prevailed at Chicago, and is again so squarely challenged, is to be found in a letter written by Mr. Debs to the convention and published soon afterward. Mr. Debs stands squarely against any subserviency toward non-Socialist unions, and running thru his argument may be seen the revolutionary frame of mind which has prevented the world’s leading Socialist parties from compromising on this or any other of the main issues that confront them. Says he:

“Upon this vital proposition I would take my stand against the world and no specious argument of subtle and sophistical defenders of Civic Federation Unionism, who do not hesitate to sacrifice principle for numbers and jeopardize ultimate success for immediate gain, could move me to turn my back upon the oppressed, brutalized and despairing victims of the Old World, who are lured to these shores by some faint glimmer of hope that here their crushing burdens may be lightened, and some star of promise rise in their darkened skies. . . .

“If Socialism, international, revolutionary Socialism does not stand staunchly, unflinchingly and uncompromisingly for the working class and for the exploited and oppressed mass of all lands, then it stands for none and its claim is a false pretense and its profession a delusion and a snare. *Let those desert us who will because we refuse to shut the international door in the faces of their brethren; we will be none the weaker and all the stronger for their going, for they evidently have no clear conception of international solidarity, are wholly lacking in the revolutionary spirit, and have no proper place in the Socialist movement while they entertain such aristocratic notions of their own assumed superiority.*”

The issue is now squarely joined, and it is difficult to see how the Indianapolis convention can avoid it.

Farming by Mail

BY WALTER S. BALL

SUNDAY EDITOR OF THE PROVIDENCE JOURNAL.

AN office worker in a New England State, ordered out of doors by his physician four years ago, bought a partially abandoned hillside farm that took most of his savings, spent the rest for postage stamps and went to farming. Moreover, tho his knowledge of agriculture at the start was of the scantiest, he made a success of it.

This was not due to the soil. Its former owner, born and brought up on a farm, had about given it up in despair. It was due, so the office worker thinks, to the stamps.

It was not a spectacular success, in the sense of great income and the development of new and rare crops. He did not adopt a "system" of poultry raising and develop hens that could outlay the cold storage houses. He did not devote himself to fancy market gardening or specialize in Luther Burbank novelties. He is merely an all-round farmer on a small scale, putting in plenty of hard work, but since his first year he has made the farm self-supporting for himself and his family.

First he wrote to the agricultural, or land grant college of his State, describing his place and asking what crops it was best adapted to. As it happened, and it usually happens so nowadays, one of the experts at the college was familiar with the locality, though not necessarily with the particular farm. Potatoes were indicated as the best staple crop, aside from what else he raised for his immediate needs.

His second stamp promptly carried an inquiry as to varieties of potatoes: which were surest, which were earliest, which

were most likely to yield him a profit with soil, climate and markets all considered? The answer came within a week, a personal letter of advice, enclosing bulletins from the college's experiment station.

His third stamp enabled him to ask a few questions about fertilizers and methods of planting, concerning which the bulletins had left him in doubt. Had he been a practical farmer, this third would have been unnecessary.

Thus equipped he set to work, preparing his land for potatoes while he and his family did the thousand things needed to make a neglected farm house a suitable home for a family from the city. Later he wrote about other crops, such as the hay and grain sufficient for his one cow and one horse. There was an old, worn-out orchard on the place. He wrote about that. He asked for information about kitchen gardening. There were few things connected with farms and farming about which he did not write questions during his first year.

And to each came a reply, usually a personal letter from one department or another, though sometimes a "stock" letter, accompanied by marked bulletins, served to answer fully every question he asked. For a year it was, practically, the management of his farm by experts at the college, with the owner acting as their workman.

The second year he had fewer questions to ask. But still there were plenty. Questions of rotation of crops, of different fertilizers, of live stock diseases, all came up. His experiences and failures of the first season suggested new in-

quiries, all of which he freely sent to the professors, who had come to know him personally by this time and to take a lively interest in his work. No author seeking to market his first novel was ever a more persistent patron of Uncle Sam's postal service than this greenhorn from the city taking his first lessons in farming.

This office worker's case was unusual in only one respect, the wholesale way in which he accepted the invitation which practically every land grant college in the country extends to the people in its sphere of influence. In the help he received, and the gladness with which it was given, it was typical of the majority of these institutions. For no more significant part of the movement back to the soil exists than this method of farming by mail.

The agricultural colleges, seeing a need, have filled it so promptly that commercial correspondence schools in farming, tho there are a few in existence, have barely gained a foothold. Taken up originally as an incidental feature of college extension work, the question-answering departments of the colleges have grown amazingly in the last six or eight years, which covers the life of most

of them. In some cases they have surpassed in importance all other features of the extension work.

Farmers' institutes, good farming trains, short courses for practical farmers in winter, special poultry courses, publication of bulletins and other methods are all of service in extending the influence of the colleges. But not one of them has come closer to the city man turning farmward or has been more directly valuable to the experienced farmer who suddenly awakens to the advantages of applied science than the extension of advice and instruction thru the medium of the mails.

In several of the colleges the "short courses" in winter have followed only at a distance after the introduction of the question-answering bureau, and it is not stretching a figure of speech to call them post graduate courses for the postage stamp farmer, who is often the prevailing type of student at these sessions.

It is no uncommon thing for the faculty of an agricultural college to answer from ten to twenty thousand questions a year, giving specific replies to specific inquiries from the farmers in regard to crops, soils, seed, fertilizers, insect pests,

TEACHING AGRICULTURE ON THE GROUND

HOW FARMERS GO TO SCHOOL TODAY

the care of live stock, every question, in short, which can arise in connection with the cultivation of the soil.

It is not likely that this work in itself will be sufficient to solve the problem of decreasing farm produce which is counted among the factors determining the cost of living. But it can solve, in many cases it has solved, the problem of increased prosperity for the individual. It has helped to revolutionize the industry on thousands of farms. It has made it possible for hundreds of city workers, driven either by inclination or necessity, to make a success of farm experiments which less than a generation ago would almost inevitably have resulted in heart-breaking failure.

Picturesque and significant as is the readiness of the latter class to take advantage of the new opportunity, however, perhaps no feature of the piles of mail that come to the agricultural college of today is more encouraging than the number of inquiries they bring from the older generation of farmers. This, in the opinion of the college directors, is a clear example of the fathers learning from the children.

Not many years ago, in one of the central States, where the agricultural college is found in its most progressive

form, a college speaker suggested at a farmers' institute the appointment of a traveling instructor from the institution, who should visit the farms and outline the best methods of work. The speaker was young and enthusiastic, otherwise he would never have survived the crushing outburst of indignation which greeted the proposal.

The mistake was both in the temper of the farmers and in the professor's use of words. Both have changed now. Two or three years later a speaker from the same college addressed a group of farmers in the same State, a gathering practically identical in character with the former one. He described at length the resources of his institution. And then he asked them if, when a new kind of bug appeared in the orchard or on the potato vines, they wouldn't like to be able to send word to the men at the college who were studying just that sort of thing, have one of them visit the farm if necessary, look the situation over and see if he could tell them what the matter was.

The farmers, unanimously and with no trace of resentment, agreed that it would be a very fine thing. It was the "instructor" under another name, but either they did not recognize it or did

FARMERS' WIVES ATTENDING A LECTURE BY AN AGRICULTURAL COLLEGE PROFESSOR

not care. Possibly, if the first proposition had been made as tactfully, it would have been accepted then. Perhaps, if the idea of an "instructor" had been as baldly presented the second time, there would have been no objection.

It would have been better received than it was at first, no matter how it was advanced. For in the meantime the farmers had been learning more about the work of the agricultural college. They had read more of its bulletins, attended more of its practical short courses for adults, written it questions and received helpful answers. This latter was the real determining factor in the change of sentiment, for it had brought them into personal relations with the experts. And the writing of inquiries had increased, because more farmers' sons had attended the college and were spreading the gospel of science thru the State.

A prosperous Eastern farmer attended one of these short courses last winter for the first time. His son had been graduated from the same institution two years before and had been working on the farm at home. The father entered in a sceptical mood. By the end of a week he was enthusiastic.

"It has helped me to catch up with the boy," he told the president of the in-

stitution on leaving. "When he came home from college he had more new notions in his head about farming than I supposed existed. He wanted to turn in and revolutionize the whole place. But most of his ideas didn't strike me right, and I let him know that I was still boss of the place even if I hadn't had a college education. I came this week purely out of curiosity, to see what there was in it. And now that I've been here I have some respect for the boy, after all. I'm going home now to give him a chance to work out a few of his ideas."

Thus the fathers are, occasionally at least, following in their sons' footsteps. But to a far greater extent the influence of the younger generation has stimulated the older one to take advantage of the college's offer to be of service by mail. At another institution not long ago a letter was received from a farmer in a remote district, the first he had ever written for information. In the language of the sporting page, it was "to settle a bet." His son had attended the college, and on returning to the farm had proposed certain innovations which met with parental disapproval. In the resulting argument the father had declared that the college experts, to whom the boy had been referring for his authority, would not en-

dorse any such thing. The youth had promptly challenged him, and he had written to find out. All this he frankly explained.

From the experiment station he received a reply, tactfully worded, endorsing the boy's position in detail, with reasons. Since then this farmer has written several inquiries on other matters, and has now become one of the college's regular correspondents.

Most of the colleges where such inquiries are encouraged take pains to advertise this fact among the farmers, in connection with the other activities of the extension departments. To answer them means a formidable addition to the work of the instructors, especially those in the experiment station. The head of a department in an Eastern institution recently estimated that one full day a week was taken up with the work of replying to these correspondents. But wherever it has been tried it has been judged among the most effective services the college renders.

Many of the questions, to be sure, would not be asked if the writers kept pace with the progress of agricultural science by reading all the bulletins is-

sued. But comparatively few farmers can do this, and the ordinary man, even when he has seen a subject discussed in general terms, likes to have definite advice in his own specific case. Many people visit a physician, even when they know precisely what ails them, merely to be doubly sure about it. That the colleges should be called on to answer repeatedly questions already discussed in their bulletins is not to be wondered at. Nor are the instructors impatient at it. For they know that a personal question means definite interest, and that personal advice thus asked for is likely to be followed.

Questions on the same topic often come in such numbers that they can be answered by stock letters, or by brief notes enclosing marked copies of bulletins. Several of the colleges, as in Massachusetts and Rhode Island, have taken pains to cover as many as possible of the common inquiries in this way. In others, like New York State College at Cornell University, it has been the policy to reply in personal letters as far as practicable. West Virginia University sends personal replies where necessary, but answers those of general interest thru a column it conducts in a local agricultural paper.

These are the common methods adopted. A few colleges, however, beginning with the University of Wisconsin, have established fully equipped correspondence courses in agriculture, where the ambitious farmer may secure a regular course in agriculture, at the cost of time and postage. Special services not readily classified in any such course are also rendered by many institutions. Thus the Rhode Island College adopted the method a few years ago of accepting samples of soil from the farms of the State for analysis, and giving detailed advice based on the result as to the kinds of crops for which these farms were best adapted.

The nature of the questions asked varies with the seasons, poultry and other livestock being the only subjects which hold their place steadily thruout the year in the proportion of inquiries, in the Northern States. Most of the letters come in the spring and summer, winter being a comparatively dull period. The

FARMERS BY MAIL

winter, however, is the time of the post-graduate study of the postage stamp farmer, in the "short courses" which all the progressive colleges now offer. These, especially in the Central and Western States, have developed to a remarkable degree of efficiency, and offer practical instruction for a week or more at a season when the farmer has most leisure for it. The Eastern colleges have led the way in the development of the question-answering idea.

The two together put the modern farmer on a very different plane of work from that his grandfathers occupied. In their days the farmer had little to

help him except the cautious advice of the Old Farmers' Almanac. When this failed him he talked it over with his neighbors. Nowadays his method is quicker and infinitely more sure. He sits down in the evening, writes a letter to his agricultural college, drops it in the R. F. D. box beside the road, and looks for a comprehensive answer by return mail. The resources of the State are at his command.

If ever the collective farmer of modern days adopts a coat of arms, the humble but reliable postage stamp should be elevated to its crest, with the R. F. D. carrier, passant, upon its field.

PROVIDENCE, R. I.

Justin McCarthy

BY SYDNEY BROOKS

[We are very glad to present to our readers this brief sketch of our London correspondent whose monthly letters, until the time of his death, have been one of the most valuable features of THE INDEPENDENT.—EDITOR]

THE death of Mr. Justin McCarthy on April 24, in his eighty-second year, stirred many and varied memories among the peoples of three countries—of Ireland, to whose cause he had sacrificed health and the natural bent of his interests; of England, where he had long been a distinguished and a much-loved figure in letters and politics; and of America, where he had spent four or the happiest years of his life, which he knew only a little less intimately than Mr. Bryce, and for whose people he had conceived a great and lasting affection. Few men of our time had led a fuller existence; none that I can recall had so universally endeared himself to all who came across him; to meet McCarthy once was to long to meet him again; to know him intimately was to bathe in the mellow sunshine of one of the gentlest and most modest natures that ever visited this earth. But unassuming, inveterately kindly, as he was, he had an ardent spirit, an almost morbid sense of duty, and a positive passion for self-sacrifice. By instinct a student and litterateur, fate thrust him into the center of one of the stormiest battles in modern British poli-

tics. He played his part with the unconscious courage and quiet tenacity that frequently mark the man of letters in the sphere of action. But it was not the part for which nature had suited him, and his assumption of it broke him in health, fortune and peace of mind. For the past fifteen years he had lived tranquilly among his books, out of the public eye, by the seaside, much hampered by failing eyesight, but otherwise in peaceful and healthy contentment, able to work intermittently, able to receive his friends, and tended by a daughter's devoted care. Looking back over his life he pronounced it on the whole a happy one. He had no great complaint to make against fate. His three master desires—to live in London, to be a writer of books, and to sit in the House of Commons—had been fulfilled. And if he was happy in his life he was not unhappy in his death. He lived long enough to know that the cause of Irish Home Rule, to which he had given all he had, had been brought to the very threshold of success.

McCarthy was born in Cork in 1830. He was thus of a ripe revolutionary age

when the rebellion of 1848 broke out; and probably nothing but an accident prevented him from shouldering a musket, rescuing Mitchel from prison, and standing side by side with Smith O'Brien and Meagher in that famous fight in the cabbage garden at Ballingarry. An Irishman of eighteen at that period was nothing if not a rebel. The movement, however, collapsed before McCarthy became actively implicated; and he took up the more remunerative and not less perilous profession of journalism. He had been well educated, or rather it would be truer to say that he had given himself a good education. When he left school he could read Greek and Latin with ease; later on he became equally at home in French, German and Italian. And with McCarthy to acquire a language was to command all the best literature that had been written in it. He developed early and never lost a passion for reading, and he was aided by a remarkably powerful memory that enabled him to draw instantaneously on every scrap of information he had thus amassed. In the House of Commons he became, as it were, a court of appeal for members of all parties in doubt as to a quotation or a historical incident or the exact phrasing of an opponent's speech. If it had ever come within the scope of McCarthy's reading—and there was little that had not—he could recall it syllable for syllable with every detail in its proper place. The gift was invaluable to him in the days when the Irish party was deliberately reducing the House of Commons to anarchy by a policy of obstruction and when every Nationalist M. P. was expected to speak as long as he could. He would get up, this small, bespectacled, obviously literary man, and would reel off in his shy, deprecating manner passage after passage from ancient and modern authors, translations from Demosthenes, a page or two from Renan, impromptu verses of his own—all without notes or any book of reference—until the Speaker would intervene and order his removal by the sergeant-at-arms.

With such tastes and equipment—supplemented by a knowledge of shorthand—McCarthy inevitably entered journalism. He was twenty-three when

he went to Liverpool and became everything that human intelligence can permit a man to be on one of the local papers. He wrote its editorials, reviewed its books, and acted incidentally as its art and dramatic critic. Something that he wrote attracted the attention of Harriet Martineau, then at the height of her fame and power, and she gave him a letter of introduction to a London editor. Once in the metropolis McCarthy quickly found his feet. It was the more necessary that he should do so as he had recently married an Irish lady whose confidence and energy supplied him with just the qualities he lacked, and whose death some twenty-five years later, when his struggles were over and he was a famous and successful author, dealt him a wound that never healed. "In those days," he remarked a few years ago, "when a young man was very hard up and had no immediate prospects, he got married." It was the best thing he could have done. Under the spur of a double necessity, McCarthy buckled to in earnest. He became connected with the *Morning Star*, a paper long since defunct, but a considerable power in the England of the '60's, and partly owned and largely influenced by Bright and Cobden. First as its Parliamentary correspondent, then as its foreign editor, and lastly as editor-in-chief, McCarthy served it for eight years. In 1868 he resigned, and for the next four years he lived in America, lecturing, writing and traveling from State to State. During this period he served as literary editor of THE INDEPENDENT. In 1872 he returned to England and joined the editorial staff of the *Daily News*, then the most powerful organ in Liberal journalism.

McCarthy by that time had taken to writing novels, as well as essays, editorials and character sketches; and in the 70's and 80's he was one of the most steadily popular novelists in England or America. He had style, imagination and agreeableness, and he never ventured beyond his depths. "Dear Lady D disdain," "Miss Misanthrope," "The Comet of a Season" and "The Right Honorable" are the best known of the fifteen novels or so he either wrote alone or in collaboration with Mrs. Campbell Praed.

They are not much read today, tho one of them, "The Comet of a Season," deserves to be; they were written frankly to suit the taste of the period—a period dominated by the *jeune fille*; and it is not by them that Mr. McCarthy's name will be remembered. As a writer he stands or falls by his "History of Our Own Times," a work that made him perhaps the most popular of British historians after Macaulay and Froude. His "History" is not indeed on the same level with theirs, any more than his political novels compare with Disraeli's. But McCarthy performed the supremely difficult task of writing of the present with impartiality, vivacity and good sense. His style is not always of the purest, but it is eminently easy, restful and picturesque. He was extremely skilful in summing up a man and his work in a few winning, unobtrusive sentences; he had something of the art which Goldsmith ascribed to Burke—the art of winding into his subject like a serpent; he was a clubable and conversational writer, with an apt and varied arsenal of illustration to draw upon; the average man found in the "History of Our Own Times" his own opinions delightfully arrayed in a drapery of literary and historical allusion; and possibly in the future men will turn back to McCarthy much as we of today turn back to Bishop Burnet. He published many other historical works—one on the reign of Queen Anne, another on the Four Georges—as well as biographies of Sir Robert Peel, of Gladstone, and of Leo XIII, but none of them equaled in popular favor the deserved success of his "History." He had originally agreed to write it for \$3,000, but the publisher, alarmed by Mr. McCarthy's political activities, begged to be released from the bargain. Mr. McCarthy promptly brought it out with another firm on a system of half profits and made a fortune out of it.

It was in 1879 that he first entered Parliament. "I had some faint hope," he afterward said, "that, as I was well known in English literary life, my standing in with my party might make some Englishmen believe that there was something to be said for the party and the cause." The hope was not disappointed. A great many Englishmen thought more of Irish Home Rule when they

saw a man of McCarthy's position and character so ready to sacrifice himself for it. And it really was a sacrifice. As a writer Mr. McCarthy had made himself known and welcomed in all ranks of English society. There was hardly any one, indeed, of any consequence in England or America with whom he was not on terms of personal friendship. But the bitter feeling aroused by the land war in Ireland and by the action of the Irish Nationalist Party in Westminster sundered many social relations. McCarthy shared in the ostracism decreed against all who supported Parnell, and he shared, too, in the rough work of obstruction that Parnell had prescribed as the policy of the Irish Party. While never a man of force and neither a great orator nor a great debater, McCarthy was a distinct asset to the Nationalist Party. He lent it an air of courtesy and refinement; he was a capital man to represent it on a great Parliamentary occasion; his set speeches were full of persuasiveness and feeling and pervaded by a delicate literary flavor; and the House gave him an attention and yielded him a respect it denied to many of his colleagues. In the harrowing crisis that followed Parnell's downfall McCarthy was chosen the leader of the Irish Party. "Only those," Mr. T. P. O'Connor has written, "who attended the private meetings of the Irish Party could ever realize what McCarthy had to face in those hideous times. He was openly flouted, insulted; he had to make the attempt with his weak voice and his gentle character to subdue tempests which only a man of fierce force of character could have quelled; he had to take part in a fight that every day became more hopeless, more squalid, more exacting." But he stuck to his post until ill health, an almost vanishing income, and a violent pressure of literary work brought on a complete breakdown. His friends never thought he would rally from it, but he did; means were found of relieving him for the future of all financial worries; and for the last decade and a half, with no abatement of his interest in men and things and books, he has rounded off his career in that serene and lettered leisure which formed no small part of his ideal of life.

Housekeeping in the Future

BY S. C. GILFILLAN

IN observing the trend of the development of housekeeping, with the aim of determining its future, we are struck first of all by the fact that housework today includes far fewer tasks than a century ago. We next notice that all those trades of the workshop-home which have been abolished have gone by one and the same change—the work has been centralized, sent outside from each home to a central plant, which serves thousands of homes. Spinning and weaving have gone to the mill, butter-making to the creamery, soap-making to the factory, slaughtering to the packing-house, the lamp has been replaced by light from central gas or electric plants, the well by municipal water supply, and in other cases too numerous to mention the change has been always the same. The reason for centralization is as powerful as it is obvious—that the great focal plant can perform work better and far more cheaply than can the isolated housewife. The general course, therefore, of the future evolution of housekeeping is evident—its various tasks will go outside the home, be centralized. Now, let us go on to tell what we can of the manner and means of each exodus.

The great task of housework is the cooking and serving of three meals a day. This has already been centralized in boarding-house, restaurant and communal dining-hall; you draw back—and rightly, for one and all they are mischievous. The trouble is that the dining-room has been centralized, and this is an institution to whose socialization there is small motive and great objection. We are very unwilling to part with the privacy of the family and the convenience of dining at home. The kitchen it is that needs centralization, that room which is only a workshop, which swallows up money and toil like a bottomless pit, that is the part to cut off from the home and send to the factory. Surely the problem will be ultimately

solved by centralized kitchens, preferably one to a city, which will send out each meal to thousands of homes.

This distribution might be by various means, of which the pneumatic tube seems the most probable. For already this carries messages between 120 stations in Paris, and in New York shoots 250-pound cylinders of mail at a speed as high as a mile a minute. Propositions have frequently been made to equip a whole city with pneumatic veins radiating from the department stores to thick-studded stations. A system like this, but having a station in the basement of every house, will not only deliver meals and parcels, but newspapers, mail, laundry, books to and from the library, and everything that can be put in a cylinder of 7 inches diameter. Tube delivery is perfectly safe—eggs, china-ware and live animals have been successfully sent by pneumatic, for the air before and behind the cylinder is always a cushion, and the rest is only a matter of full packing. The “carriers,” as the cylinders are called, will be suited like freight cars to the objects they carry. Those for food will have separate compartments for each viand and liquid, and have double walls forming a vacuum, or more cheaply, a jacket of hot or iced water. This will be needed more while the courses are being served than during transit, for a speed of a mile a minute, which suggests the telephone more than the delivery wagon, would hardly give soup time to cool between kitchen and suburbs.

The central municipal kitchen will be as notably efficient as our kitchens for single families are inefficient. Its raw materials, instead of being carted all over a city in buying and selling, will be brought in the original freight cars right into the vast meal factory, and unloaded into great machines for washing, peeling, etc. From these they will be chuted into other machines for cooking, instead of being put in little saucepans to stew

on stoves which waste 99 per cent. of their heat. (However, much of this heat is absorbed by the cook, especially in summer.) And finally, by machinery largely or entirely, they will be dished into "carriers" and sent out. Each cook will handle tons instead of ounces, a fact which insures immense saving of expense, along with a great increase of science of recipe and accuracy of execution. And so, whereas at present food falls little short of trebling in cost in traveling from freight car to table, by this route of the future it will increase only 25 per cent. The saving is enormous.

A municipal kitchen will not entail uniformity of fare, but only make possible a greater diversity. For each family will have meals of that grade which it can pay for, ordered à la carte by telephone or table d'hôte by a regular arrangement to exclude cabbage. And the menu to choose from will fill half a page of each morning's newspaper, for every one's money will go two or three times as far as today, and the least popular dish will have devotees by the hundred. The only restriction imposed by municipalization of food is that quality shall not go below a proper minimum. From the public tubes one could never get meat stale or burnt, but only from some conservative hostess who believed in the corner grocery and home cooking.

Turning to dishwashing, we note that the more disagreeable half of this work will disappear with the pots and pans and kitchen crockery. As for the table dishes, we may imagine that the housewife will arrange them in a metal cabinet in the dining-room wall, at the same time scraping them into a "carrier," which she will post, and then locking the cabinet door, go away, her work done. Clockwork controlling valves will first drown the dishes in a swirl of hot water impregnated with solvent and disinfectant chemicals, rendering them aseptically clean, then rinse them and finally dry them by an air current, leaving them ready for the table.

After food the next greatest care of housekeeping is the making and mending and washing of clothes. The movement of centralization is making all speed in these provinces: in the end we

shall surely have all our clothes made in the factory or shop, and send them all out to the laundry for washing and mending. Another care, that of heating the house, has an equally obvious ending—the centralized heating plant.

The troubles of shopping will be minimized by the telephone, pneumatic tube and telecinematoscope. The last word, which will doubtless be shortened, is the name of a newly invented device which telegraphs a moving picture. When it is perfected and made to show natural colors, the department store clerk need only hold up an article before the transmitting "eye" for the shopper at home to examine it as easily as if in the store, perhaps better, by aid of a magnifying lens. Conversation, of course, will go on thru the telephone, and when finally the purchase is selected it will be delivered at once by pneumatic. If not satisfactory it could be exchanged in five minutes.

We sigh for more worlds to conquer; only bed-making and housecleaning are left. For the first H. G. Wells suggests a solution something like the following: Each of the bed-coverings will be attached at the foot to a framework which, by merely the movement of a lever on arising, will raise them and swing them apart, leaving them hanging free to the light and air, above the bed. To make up the bed a second movement of the lever would swing all the covers together, and then by a motion at once downward and toward the foot of the bed, lay all properly and smoothly on the mattress. Then the owner, in a few motions, would "tuck in."

Housecleaning, being a complex affair, is not to be dealt with so briefly. In the first place, there will be much less dust to remove when street traffic is limited to occasional automobiles, and coal fires to centralized power plants which burn their own smoke. And the labor of taking up what remains will be lessened by the movement in progress today for making our houses more easily cleanable by having smooth surfaces, rounded corners, everything removable, fewer knick-knacks, etc. The cleaning which still remains to be done will, it would seem, be divided among professional cleaners from outside the home. For not only is

there an evident tendency toward this solution, which has reached almost to completeness in window-washing and carpet-cleaning, but also the principle of centralization quite condemns the Jill-at-all-trades housewife, and requires that housework and cleaning itself be divided and given to specialists, so that the laborer may always be suited to the labor, and thoroly skilled and equipt for it. We may, therefore, expect a great expansion of housecleaning companies, whose agents will come at intervals to put a house thoroly in order, one using the vacuum cleaner, one polishing the floor by electric revolving brushes, etc. They will do the work well and exceedingly quickly, because each will have had abundant training and practice in one kind of work, and because they will bring the most modern and effective apparatus, which none but an expert could use and none but a professional afford. With only a few doors to travel between engagements the charges will naturally be small.

Servants, of course, will last on in rich women's mansions, to hunt motes of dust with microscope and forceps, and to make a good show in the vestibule; but in all other homes the "servant problem" will have found its ideal solution. Half an hour a day of the mistress's

time will take care of everything, for beyond answering bell-calls and setting and unsetting the table, there is absolutely no housework to do. What women will do with their new leisure is a question which we cannot discuss here, but we may be sure they will do something that is worth while.

When shall all this come to pass? Not so speedily as one might expect. For in the case of labor-saving schemes which are adopted by one *ménage* at a time the wise have no power to coerce the foolish, hence decades or even generations must elapse between the day a device is invented and the day it is used universally. On the other hand, in affairs which require the consent of half a city—a municipal kitchen, for example—the foolish do have power to coerce the wise, for the foolish are in the majority. It is the conservatism of this majority which chiefly retards the attenuation of housework, for as to the mere making of the necessary inventions, that could all be done in a year, if the world should wake up and want them. The centralized kitchen will come, not when tubes are invented, but when women will see the merit in some one else's cooking, or the grocer, the teamster, the shopkeeper see the rightfulness in a change which would wither their occupations.

NEW YORK CITY.

A Caryatid to a Telamon

BY MARGARET ROOT GARVIN

"It presses hard—all that I have to bear!

O Telamon, hast not a hand to spare?

Thine is the task that stretches nerve and thigh;

Mine, the wo-weight of being woman, too!

O Telamon, dost thou not know, nor care?

"Why doth thine head down-droop so wearily

Thou wilt not even raise thine eyes to me?

Dear Telamon, thy strength is taxed too sore!

Give me the burden that thy shoulders bore,

For I am woman, and twice strong will be!"

WHITESBORO, N. Y.

Literature

Blok's History of the Dutch Nation *

AMERICANS may well be proud of the work done by Mr. Motley. Under his hands "history is a resurrection." After half a century and with the work done by Dutch archivists and historians, in mass and in detail, in view, one may indeed pick holes in his fellow-countryman's entrancing narrative. One may even refuse to place his decadent work, "John of Barneveldt," in the category of trustworthy history. Nevertheless, even greater than his output of nine volumes was his fertilizing touch upon the Dutch scholarly activities. In the Dutch archives lay masses of buried documents as in a university. The coming of the American was as the miracle in Elisha's time. The grave cast out its dead and the corpse sprang to life. After Motley came Fruin, who raised up a host of investigators from among his pupils, chief of whom is Prof. Dr. P. J. Blok, first of Groningen and then of Leyden University. This is the alma mater of Robinson and Brewster, of the Pilgrim Fathers company, of the sons of John Adams, and of thousands of English-speaking students shut out, for conscience' sake, from the English universities after 1662.

Dr. Blok's labors, now completed, show an indomitable unity of achievement. After years of preparation in the archives of the home land and countries adjoining, he issued his first volume in 1892. Since then, despite his multifarious duties, including the instruction of Queen Wilhelmina, a volume from his pen has dropped from the press biennially, until eight of them in the Dutch text awaited the work of the translators, Miss Ruth Putnam and Mr. Oscar A. Bierstadt, of the Boston Public Library. These now complete their task in the fifth and final volume, and to them the thanks of the reader in English are due.

Much of the original narrative, of high interest to a native and valuable because of manifest accuracy, fresh data and correct perspective, does not appeal to or particularly interest an American reader, and this the translators have wisely condensed. No loss, however, is visible of the excellent equipment of the original maps, discussion of sources and authorities, indexes, etc.

The ripest and latest criticism of Mr. Motley's narrative is this, "Best when unvarnished." If Dr. Blok refrains from the rhetorical embellishments and enlargements of his American predecessor, who taught the world most of what it knows of Dutch history—tho he covered in detail less than fifty years—he is better balanced and excels in trustworthiness. It is certain that Blok has a truer perspective. Naturally his main thesis is political. Within the arcana of the Dutch statesmen, into which Mr. Motley entered by no means very far, being more felicitous and successful in depicting the foreign environment of Holland than her inmost life—Dr. Blok leads us like a master sure of his path. With him we hold firmly to the clue while in the labyrinth of Dutch politics, the Leyden professor's temper being cool and judicial compared to the hot partisanship of Groen van Prinsterer, who was Motley's severest critic. While, too, the author shows slight respect for the overwrought and often fanciful theories of the late Douglas Campbell, who knew no Dutch, yet he shows clearly that in the evolution of the nation the Netherlands was usually a pioneer, and far in the advance as compared with England, and at least in most features of material civilization led her island neighbor. Until the clash with Spain, the southern provinces excelled the northern in population, wealth, industry, art and architecture. Many things then unknown in the British Isles, such as free printing, universal common school education, charters in the vernacular and organized industry, had been in the Low Countries matters of long possession. The march

*HISTORY OF THE PEOPLE OF THE NETHERLANDS. By Petrus Johannes Blok. Vol. V. Fifteenth and Nineteenth Centuries. New York: G. P. Putnam's Sons. \$2.50.

of Alva in 1567, to enforce the decrees of the Spanish Inquisition and to create financial anarchy, paralyzed industry and helped to depopulate the Belgic Netherlands, to the enrichment of the northern provinces. Soon, from an area of 4,000 square miles and a population of 800,000, the Dutch Republic, reinforced by the fugitive Walloons and Flemings, was able to boast of 2,000,000 souls. Leaping quickly to pre-eminence and invincible on the sea, conquering by the windmills and drainage a fresh domain from the sea, the land of Rembrandt led in art also. Apart from war and politics, Dr. Blok is happiest when he pictures the home and farm, school and church, and tells the story of the artist, the sailor, the merchant and the reclamer of land; in a word, when he becomes a realistic painter in language of genre. His vivid sketches of the stages of civilization, of city and country life, of the castle and town hall, of the activities of the inventor and explorer, are of absorbing interest. He realizes also the dramatic possibilities while presenting the careers of the many eminent women in the Netherlands story.

An American may not unjustly find fault because, having a different perspective, many things that would interest the transatlantic reader are unmentioned in Dr. Blok's pages. Especially is this true if he feels that the history of the United States can never be properly written by any one who has not saturated his mind with the history of this home of municipal progress and of federal government. Bancroft's work of second-hand information can never satisfy one who knows the ins and out of the Dutch Calhoun, Barneveldt, and the union assertor, Maurice, in their titanic struggle.

It is when picturing the colossal duels between Goliath-like Spain and David-like republic, and the struggle of the military chieftain and the far-sighted statesman, that Dr. Blok rises to his best. The Dutch confederacy faced the issues which made the American republic possible and fought them to the finish. When the military and the civil powers, incarnated in Barneveldt and Maurice, are pitted one against the other, the "indescribable pleasure" confessed by the author, as his pen moves, is shared

by the well-informed reader. His thrill is like that of a war correspondent witnessing the grand fight that taxes all personal resources to the utmost. If the final volume, telling of the fall of the republic, the Napoleonic era, the union with and rupture after fifteen years with Belgium, the career of Thorbecke, the constitutional revisions of 1848 and 1887, and descriptions of the land and people at the close of the nineteenth century, be less exciting to the reader, it is because happier Holland has less strenuous struggles than in the heroic days when Spain was humbled. It is clear that the disguised republic now called a kingdom, when the sovereign's crown, so far from being a family possession, is a symbol of law, and the sovereign is merely the first servant of the people, fulfils the hope of the weak federalism of older days.

Ballads of a Cheechako. By Robert W. Service. New York: Barse and Hopkins. \$1.

Bret Harte or his double must have found his way back into life and clapped himself down in the Klondike region, having lost somewhat of his perfect art, but none of his tendency to "talk in direct and virile language" of the "primal instincts and passions." The *Ballads of a Cheechako* certainly have a strength and wild carrot flavor of their own, not in anywise due to anything of Bret Harte's work except his initiative. With the tang of the mountains and the mines, they find a soft spot in the heart for those who have to go down to the "deeps," not in ships, but in shifts, and do business in the underground. We will not follow Mr. Service in the ghastly tales he has to tell of the hardships of such. One stanza from "The Northern Lights" will serve to show what a grasp the poet has on the large canvas of landscape peculiar to the Far North, also what a musical ring he has put into the twenty-one ballads contained in his little book. The scene is near the sources of the Yukon River:

"Oh, the cundra sponge it was golden brown,
and some was a bright blood-red;
And the reindeer moos gleamed here and there
like the tombstones of the dead.
And in and out and around about the little
trail ran clear.

And we hated it with a deadly hate and we
feared it with a deadly fear.
And the skies of night were alive with light,
with a throbbing, thrilling flame;
Amber and rose and violet, opal and gold it
came.
It swept the sky like a giant scythe, it quiv-
ered back to a wedge;
Argently bright, it cleit the night with a wavy
golden edge.
Pennants of silver waved and streamed, lazy
banners unfurled;
Sudden splendors of sabers gleamed, light-
ning javelins were hurled.
There in our awe we crouched and saw with
our wild, uplifted eyes
Charge and retire the hosts of fire in the bat-
tle-field of the skies"

His song is to be welcomed for the beauty of his descriptions, its promise of mastery in verse-painting of a life still new to the East—a wild, harsh, in many respects an ugly life, in which, as a highly civilized Easterner once put it, a man strips off one after another of the integuments to which the world has accustomed him, and comes down to the breech-cloth of the Indian.

The Early Literary Career of Robert Browning. Four Lectures, by Thomas R. Lounsbury. New York: Charles Scribner's Sons. \$1.26.

The Brownings. Their Life and Art. By Lilian Whiting. Boston: Little, Brown & Co. \$2.50.

Professor Lounsbury's lectures at the University of Virginia on the "Barbour-Page Foundation" make interesting reading for all who are interested in Browning's poetry. He says what he has to say in a clear and vigorous style, without any attempt at polish, to be sure, but graced with humor and occasionally spiced with irony. The irony, indeed the professor's judgments, are stimulating, but will provoke to bitter dissent the Browning enthusiasts and to a reasonable regret for his limitations the true lovers of poetry. He is hard on Browning—a bit too hard, we believe. He has found the poet so "obscure" that he belittles Browning's real achievement and fears for his lasting fame. He passes by, in making up "the main account," elements that are essential to full and fair appraisal, and his animus against the poet, only poorly veiled in his pages, unfortunately lessens the value of his study. In the first lecture he sets forth his thesis that Browning's lack of a university training "will have

in the long run a damaging effect on his reputation. His writings show thruout the lack of that final result of thoro training, the ability of the communicator of ideas to put himself in the position of the recipient." Professor Lounsbury shows that at first Browning's early work (excepting the still-born "Pauline") was exceptionally well received. "Paracelsus" made a deeper impression among the leaders of English thought than any other work of its time. "Strafford" disappointed high hopes. Of "Sordello" the lecturer says: "Perhaps there is no instance in literary history of an author who proceeded to destroy his own reputation with more systematic endeavor. . . . Certainly never were efforts of that sort attended with more overwhelming success"; and he goes on to maintain that the poet's "obscurity" alone blighted for thirty years thereafter a most promising literary career. He holds that Browning, "in the proper sense of the word, is no dramatist at all," attesting the absolute "failure" of his dramas on the stage, and applying ruthlessly to "A Blot i' the 'Scutcheon" critical standards appropriate only to realistic transcripts from everyday life and not to poetic drama. In short, Professor Lounsbury's criticisms are only partly just and only partly true. And this is a pity, for otherwise his little book could be unqualifiedly recommended as an excellent antidote for the gush of some Browning worshipers, which does more than any faults of his own to damage the poet's reputation. Compounded in about equal parts of such gush and of sickly sentimentality is the big octavo in which the authoress who perpetrated a sketch of the life of Mrs. Browning several years ago now essays to present *in extenso* "the most exquisite romance of modern life." In the presence of such a sublimation criticism is superfluous. Why break a butterfly on a wheel? Miss Whiting boasts the friendship of Mr. Robert Barrett Browning, son of the poet, who aided in the selection of the family portraits used to illustrate her book, and she prints several hitherto unpublished letters written by Browning in his later years to his friend, Mrs. Arthur Bronson, of Venice, who was a granddaughter of the American poet, Joseph Rodman Drake.

Literary Notes

....A most thin, disjointed story is May Stranathan's *The Huff Case* (Badger; 75 cents), dealing with a murder, and the eventual freeing of the murderer. The plot is obscure and the characters undecided. The author might do well to study some textbook on narrative structure.

....In the "Author's American and Colonial Edition" we have a reprint of Professor Edward Dowden's *Shakspeare: A Critical Study of His Mind and Art* (Dutton; \$1.50). Much has been written about Shakespeare since the learned Irishman first signed this sane and stimulating study, but the value of the book is not one whit diminished.

....From E. P. Dutton & Co. we have two of the neat thin little volumes of the "Temple Cyclopedic Primers." One is by J. B. Oldham on the art of the *Renaissance* and the other by J. I. Fowler, on *Our Weather*. They are both sufficiently illustrated for the purpose, and are good handbooks. As these are English books, that on meteorology illustrates British conditions, but the principles are the same for our longitude. 35 cents.

....Readers of Mary R. S. Andrews's "The Perfect Tribute" will welcome her new Lincoln story, called *The Counsel Assigned* (Scribner; 50 cents). While not so excellent as the previous tale, it bears the same sentimental touches. Showing the human side of Lincoln's character, in it, the lanky candidate for Congress defends against the charge of murder a boy whose mother had befriended him in earlier days.

....When children grow up they desert the home and shift for themselves. Rupert Hughes's *The Old West* (Century; \$1) tells of the mother and father who remain in a deserted house, while all their children carve their separate way elsewhere, meaning to write, meaning to send presents, yet always delayed. There is a charm in Mr. Hughes's presentment of this domestic tale. There is springtime in it; there is also the scent of rosemary—an hour's sentiment between violet covers.

....Edna Ferber is the Chicago O. Henry. Her short stories called *Buttered Side Down* have the crispness of the genius named, the vividness, the nervousness. Her occasional fault was his only in a slight degree: a certain consciousness that she is telling a story and indulgence in disillusionising references to the magazines and the tricks of the trade. Yet she is always diverting and almost always refreshing. (Stokes; \$1.)

....Evidences of careful and minute observation are found on every page of the modest volume, entitled *Things Seen in Northern India* (Dutton; 75 cents), by T. L. Pennell, M. D. The well-chosen illustrations and detailed descriptions of the actual life of the people, the face of the country and modes of travel give the reader a vivid picture of a land with social customs as foreign to us as its ancient tongues, but slowly changing under the impulse of Western ideas.

....History as written by eye witnesses has always been held in suspicion, especially when dealing with the epoch of the Civil War. The Harpers have issued the true account of *The Monitor and the Merrimac* (50 cents), told by officers Worden and Green, U. S. N., and Engineer Ramsay, C. S. N. They took part in the famous battle, and their personal experiences are given. These accounts will not dispel the varied controversies regarding the famous engagement, but they will be of interest to many readers.

....Leroy Scott has taken a woman lawyer as the heroine of his latest novel, *The Counsel for the Defense* (Doubleday; \$1.20)—we might say, the hero of it, since there are no male characters worth mentioning in that capacity. There would certainly be no question of women's fitness for the legal profession if they were all like this one. Within a few months after her admission to the bar she secures the release of two innocent prisoners; overthrows a political ring; exposes a water-works conspiracy; elects a mayor—and marries him.

....In our issue of May 9 the wording of a sentence in the review of the volume on *Woodrow Wilson* gave the mistaken impression that Governor Wilson followed *immediately* Dr. McCosh in the presidency of Princeton University. We had no intention of slighting the regime of Dr. Francis L. Patton, who for fourteen years so graciously and ably filled the position made vacant by the resignation of Dr. McCosh in 1888. It is not often that a university can boast of two such active and vigorous ex-presidents as can Princeton today.

....Miss Nora Archibald Smith is one of the foremost authorities on Kindergarten methods. Therefore her small handbook, *The Home-made Kindergarten* (Houghton; 75 cents) will prove a boon to those particular mothers who are remote from city advantages—"on the rolling prairie, the far-off ranch, the rocky island; in the lonely lighthouse, the frontier settlement, the high-perched mining camp." To such as these her practical

explanation of the Froebel gifts and occupations will be of service, and to the believers in kindergarten training Miss Smith's attitude will prove inspirational.

....The story of the tale, *Love in a Mask*, ascribed to Honoré de Balzac, is rather more interesting than the tale itself. We are informed that its manuscript was presented by the novelist to the Duchesse de Dino and by her preserved unpublished. It is now charged that the story is a plagiarism. We see no reason why Balzac should have stooped to plagiarize if nothing better than *Love in a Mask* was to be the result. An extravagant romance of a type long since outmoded, it deals with mysterious ladies, negro servants who place bandages over the eyes of the hero before admitting him to his lady's presence, and all the paraphernalia of bastard Gothicism. (Rand, McNally; \$1.)

....Many parents and Sunday school teachers will be glad to make extensive use of *A Child's Guide to the Bible* (Baker & Taylor; \$1.20), written by Dean George Hodges, of Cambridge. It is an admirable introduction to a first reading of the Scriptures, combining a knowledge of contemporary history and literary characteristics with some elucidation of the various books, given in simple story form. It emphasizes modern views, and will make acceptable reading for many beyond the childhood age. But why and on what principle does Dean Hodges improve on the traditional number of Biblical books, speaking repeatedly of *sixty-seven*? Where does the extra book come in, and if one extra, why not more? On page 138 Ahab is a misprint for Ahaz.

....A vivid description of the Atlantic ice-field as seen on a recent ocean crossing is given in a letter written by the Breton poet, Anatole le Braz, on the very evening of the "Titanic" tragedy. M. le Braz was at the time a passenger aboard "La Provence" and was seated in the salon:

"a delicious corner, truly French, with its Louis XV furniture of faded shades and its old-rose carpet. Outside, the siren sounds at intervals its lugubrious chant, which, in mythological times, fascinated the heart of mariners; it is changed since. We are crossing a bank of fog which doubtless repeats in the sky the bank of Newfoundland under water, whose 'tail' the captain just announced we were traversing. I give you this nautical metaphor for what it is worth. Up north there, two roving icebergs showed this afternoon their profiles of floating cathedrals. One of them even had three spires: thus 'raising one' the Cathedral of Chartres. It was very mysterious to see them against the distant polar sky."

M. le Braz is the author of "The Night of Fires," a translation of which we discussed in last week's *INDEPENDENT*. We mis-stated, however, the price of the American edition of the work, which is \$1.60.

Pebbles

TEACHER—Haven't you studied your arithmetic lesson?

Scholar—No, 'm. I didn't have no time to learn nothing but me grammar lesson.—*School Sixty-two*.

"How well you are looking!"

"Yes. I am a vegetarian."

"That settles it. I shall never eat meat again. How long have you been one?"

"I begin to-morrow."—*Meggendorfer Blaetter*.

A SMALL Norwegian lad presented himself before a Minnesota school teacher, who first asked him his name.

"Pete Petersen," he replied.

"And how old are you?" the teacher asked next.

"I do not know how old I bane," said the lad.

"Well, when were you born?" continued the teacher.

"I not born at all; I got stepmutter."—*Metropolitan*.

A COMMERCIAL traveler at a railway station in one of our Southern towns included in his order for breakfast two boiled eggs. The old darkey who served him brought him three.

"Uncle," said the traveling man, "why in the world did you bring me three boiled eggs? I only ordered two."

"Yes, sir," said the old darkey, bowing and smiling, "I know you did order two, sir, but I brought three, because I just naturally felt dat one of dem might fail you, sir."—*Harper's Weekly*.

THE MUSE OF PARODY.

To fairer muse the high-browed bard
May lift a lilting song.
But, Muse of Parody, dear pard,
My heart for thee is strong;
Let others twang the golden lyre,
And hit the topmost C—
The second-hand poetic fire
Is good enough for me.

Grim hours there are when nothing swims
Into the rhymster's ken—
When frantic effort merely dims
The thinking powers of men;
'Tis then the bard may turn unto
Something that's made a hit—
"The Raven" is often made to do—
And parodize a bit.

"Maud Muller"—may she always wave
With rake and deathless hay;
Full many a poet may she save
From losing job and pay;
And "Danny Deever" and the rest
On whom so much depends,
Long may they live among the blest—
The parodist's best friends!

—*Denver Republican*.

The Independent

Entered at New York Post Office as Second Class Matter

Publisher, Clarence W. Bowen

130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Restriction of Immigration

OURS is a big country, big in territory, big in arable land, big in available resources of every kind. It has very little sandy desert where people cannot live. It does support a hundred million people; it could support comfortably three or four times as many at least. There are vast spaces unoccupied, vast spaces only partially or imperfectly cultivated. Ours is a big country in population; but it might well be very much bigger, to the advantage of the country. We are proud of its bigness in land, river, lake, mountain and shore; and we are proud of its rapidly increasing population as proved by every census; and yet we are constantly talking and legislating as to how we can prevent our population becoming greater by immigration. Our legislation is a curious inversion of our plain destiny and desire in that it shuts out immigrants and restricts population and development.

Of course, paupers and criminals should be excluded. They should stay where they are produced. They will not develop our country. But those who will develop our resources and strength

ought to be welcomed. That is a plain principle, but at present it is openly or covertly opposed on grounds that will not stand examination. In its extreme of narrow absurdity it appears in the policy urged and adopted in Australia, where, in the assumed interest of labor, it would discourage even white immigration. The one and only argument back of all these exclusion rules is, confess or unconfess, that a paucity of labor is desired by a class of laborers, so that they may secure larger wages by the resulting competition for it. There then follows for them an increased cost of living by the increased price of products, and the process goes on, more cost of living, more wages.

The Dillingham bill now being considered in Congress is another law intended to unify our laws for restricting population by immigration. The purpose we do not approve. We regard it as unwise in political economy, and ungenerous and indefensible morally. It is of the same ethical type as the action of the titled passengers on the lifeboat only half filled who were unwilling to try to save others that were struggling in the sea. Immigrants come here to improve their condition a great deal; they are told they must not do it for fear we shall be crowded a little.

Senator Dillingham's able defense of the bill brings out some important admissions resulting from the very careful investigation of the conditions of immigration. It appears that immigrants as a body are choice people, the choice of their race, whatever that race may be. They have more than usual enterprise. They are of those who have ambition to improve their condition. They are strong and healthy young people. They are able and willing to work. It appears further that an illiteracy test does not shut out criminals; criminals generally can read. Immigrants are, on the whole, picked people. The children of immigrants attend our public schools more faithfully than do the children of native parents. Further, there is no effort on the part of foreign governments to dump their undesirable citizens on our shores. No evidence of that could be found. Indeed, European countries are

trying to prevent emigration, while Japan refuses to give passports to laborers, as she wants them in Formosa and Korea.

The Dillingham bill has been amended since first presented. We called attention immediately to a provision in it which indirectly excluded Japanese laborers by excluding all who cannot be naturalized. That, which would have been very offensive to Japan has been eliminated. This is done, while retaining the clause which excludes Mongolians who cannot be naturalized, by making an exception of those otherwise excluded by treaty or convention as to passports, etc., there being such an agreement with Japan. The Chinese remain excluded, but there is a certain amelioration in the conditions which secure it. We do not believe in this policy of exclusion. It is bad for us and ungenerous, and, indeed, inhuman, but the present bill makes matters no worse as to Mongolians.

It does make matters worse as to Europeans. Here the main provision is, that those who cannot read are excluded. The argument given for this exclusion is not that the illiterate are not useful laborers, nor that they are more criminal, but that they take the unskilled fields of labor, and that these fields are overcrowded. Evidence of this is that the annual income of such laborers in the coal and steel industries, as compared with their daily wage, shows that there are considerable periods of non-employment. It is not made clear that such cessation from work is due to the failure of work to do. We judge that those who are willing to work steadily can get work, and it would not be bad if those who are less faithful should be crowded into other less toilsome and less remunerative pursuits. The purpose of the bill is to exclude common laborers, such as work in mines or on railroads. It is further the aim to shut out those who do not desire to make their permanent home here, for nearly half of those who come go back to live. If this is the case, one would think it would please these enemies of immigration. The young men come here, enrich the country more by their work than we are impoverished by the money we pay them, and which they

send or carry back to Italy or Hungary, and they do not remain to be further competitors in the labor market; and yet the bill tries to exclude these temporary creators of wealth. The policy and purpose are indefensible.

Nevertheless, the bill will pass substantially as it is. It makes a little improvement in reference to Mongolian immigration, while maintaining exclusion; and it is decidedly worse than our present legislation in its exclusion of European immigrants. It is meant to placate that spirit which says: "We have the jobs and no one shall come in to share them; we want it all, and we want more." It is the spirit which shuts out apprentices, which fears competition, which thinks ours is a small country, a country only big enough for those that are in it. It takes a false and meager view of our possibilities in the future. It thinks money taken out of the country impoverishes us, no matter what products of labor it leaves behind. It is more afraid of illiterate fathers than it is gratified by their educated children. It looks in a near-sighted way very narrowly at the present and is blind to the future. It means well, but it acts without foresight or wisdom.

Princeton and Progress

LAST week Princeton Theological Seminary celebrated the centennial anniversary of its founding, and a notable celebration it was. More than five hundred church dignitaries, representatives of theological and other institutions of learning, teachers and alumni of Princeton, gathered to do honor to the school made famous by such men as Archibald Alexander and Charles Hodge. The seminary was planned and established by the General Assembly of the Presbyterian Church, and, tho a dozen other theological schools have since sprung up to meet the growing demands of that great denomination, Princeton has outstripped them all in the number of her students, the fame of her teachers, the extent of her endowments and the favor of the General Assembly. One hundred years ago three students assembled for instruction under a single professor; and last week a graduating class of more than

fifty received diplomas from a faculty numbering seventeen. In the interim nearly six thousand alumni have scattered thruout the world to become preachers of the gospel, leaders in education, and organizers of missionary and philanthropic enterprises. These material signs of Princeton's greatness have been fully equaled by her intellectual leadership and missionary enthusiasm. The names of Alexander, Hodge and Green add luster to the roll of nineteenth century theological scholars; and the zeal and devotion of her hundreds of missionaries have been as striking as the earnestness and eloquence of her preachers.

The past of Princeton is secure, but what of the future? A great history is an inspiration, but it lays corresponding responsibilities on those who inherit its greatness. For a century Princeton has shown unswerving loyalty to the Westminster standards, and in the course of her apologetic she has produced some mighty defenders and exponents of the faith, but has she today a program and a vision that will set on fire the youthful heart and enlist the service of the keenest intellect? How will this venerable institution use the stored energy of historical incentive and accumulated endowments which she holds in trust? Is her face to be toward the future, which bristles with unsolved but urgent problems, or toward the past, where lie the smoldering embers of burned-out controversies? It was noticeable that in the centennial addresses no recognition of present problems or hint of future progress was anywhere given except by one speaker, who frankly acknowledged that he had ceased to be in harmony with Princeton's theological past; but he was no less a man than Dr. Stewart, Moderator of the Established Church of Scotland. It is a serious question whether the over-emphasis of former achievement and the efforts to keep vital a system no longer articulated with present needs are not obscuring the vision of those whose duty it is to guide the destinies of the seminary, and dissipating her tremendous resources for high and noble service to God and humanity into confused and petty struggles over names and forms and spoils. The shadow on the dial goes no more backward as in the days of

Hezekiah, and the issues of half a century ago will awaken no worthy response in the manhood of today. Our sons will no longer seriously battle over the decrees of God or the exact definition of Scripture inspiration; but the burning questions of militarism and social amelioration, of democracy and property rights, of organized justice and the ethics of Jesus, of Christian miracles and the psychology of the soul, of poverty, sin and the kingdom of God—all these and many more of like nature are worthy subjects for the giant mind and heart of an Alexander, a Miller or a Hodge. Will Princeton assume the burdens of the future or drag the dead weight of an empty loyalty to the past?

Unrooted Humanity

It seems that the race is now in the midst of another metamorphosis, similar to that of many thousand years ago, from the nomadic to the agricultural stage of civilization, but in the reverse direction. Mankind is becoming mobile once more. Cheap transportation and universal law have made it no longer necessary to remain in one place, either for the making of a living or the enjoyment of life. In fact, the rolling stone is likely to get the advantage of his moss-grown brother in more than mere polish.

The modern nomad enjoys most of the privileges of civilization and largely escapes the burden of maintaining it. He evades taxation and the more onerous and equally obligatory contributions that a community imposes upon its permanent constituents, such as subscriptions to church, charities and local enterprises. Many of our expatriates count the evasion of these unofficial tax levies as one of the most considerable of the savings they make by residing in Europe instead of in this country. The nomad also loses, it is true, his vote, but he regrets that, if at all, for sentimental rather than practical reasons. If he finds himself in an ill-governed locality, he has only to move on to one better ordered. This is vastly easier than to reform the government, as he would be obliged to do if he were rooted to the spot. The migratory portion of the

population has indeed come to have more influence upon government than the stationary. The inhabitants of a country town may patiently endure typhoid fever as one of the inevitable ills of humanity, but when they find that the summer visitors do not so regard it they bestir themselves to put a new filter into the waterworks. The cleaning of the streets of Naples, the suppression of the Apaches in Paris, the elimination of bubonic plague from San Francisco, the development of indigenous architecture and local crafts in a thousand villages, are due more to external stimulus than to native initiative. The tourist is often better cared for than the residents, and he receives at least as satisfactory legal protection from local courts wherever he may be.

Formerly it was only the man of independent fortune and no particular occupation who had the privilege of free migration, but now it is different. The middle class is still bound to the soil, but the serfs are freed. The land-owning farmer, the shopkeeper, the professional man, cannot change his residence without loss, but the proletarian is becoming as cosmopolitan as the plutocrat. The American gentleman of leisure may spend part of his year in Italy; so does the Italian laborer. The Slovak miner in Pennsylvania or Wyoming finds it cheaper to go back to his native land if he is out of work for a few months. The tide of human migration ebbs and flows across the Atlantic with an annual periodicity, and the coast countries of the Mediterranean are becoming one with Argentina and the United States. Such words as "Italian," "Greek," "Syrian," etc., are becoming like "Jew"—racial, not geographical, terms.

We Americans, bred from selected pioneer stock for successive generations, have always been of a roving disposition. And now there are doubtless some millions who have no settled habitation, who are at home wherever they may sleep. If they happen to have been raised in a country town, they may indeed retain a sort of sentimental attachment for the place, and may show a curious disposition to return to it in the last days of life. But in the second generation affection for the ancestral

home becomes artificial and attenuated. To keep up a permanent home in country or city for occasional use is too expensive and unprofitable a luxury for most. Building a house is giving a hostage to fortune. It is soon felt as a limitation of one's freedom of movement. It puts a man more at the mercy of his employer. Women, traditionally supposed to have, like cats, an attachment to particular places, are showing in this, as they are in many other instances, that qualities assumed to be innately characteristic are in reality imposed upon them by necessity. The women, when circumstances permit, appear to be even fonder than the men of travel for travel's sake.

But we have no mind to blame the disposition in either sex. Mobility distinguishes the higher forms of life from the lower. Minerals are inert. Plants are rooted. Animals are free. The clam should be a warning example to us, for in youth it swims about freely, but later in life settles down and grows a shell. Hence the common injunction, "Don't be a clam!" Rather let us take as our models those adventurous weeds of the West which, when they reach a certain maturity, tear themselves loose from the ground and go gleefully bounding across the plains and soaring high into the air on the wings of the wind. It does our heart good to watch them enjoying their freedom like colts turned out to pasture. Man, having been endowed with legs instead of roots, should use them.

President Hibben

PRINCETON UNIVERSITY and Princeton Theological Seminary are two separate institutions in the same town, and they have separate boards of trustees. In no sense is the seminary a part of the university. The seminary is under strict Presbyterian control; the university is not. The seminary maintains, as far as possible, the theological position of the Assembly's Shorter Catechism which it held under Charles Hodge, followed by other professors of the name; while the university is utterly different from what it was under President McLean. The closest relation between the two is found

in the fact that President Patton, of the university, subsequently became president of the seminary.

We recall the university, or, rather, college, as it was on the day of Dr. McCosh's inauguration. We printed the next week an article giving the impression of the college made upon a visitor at the inauguration. It was not a favorable one. To one who had been familiar with the New England colleges of forty years ago Princeton seemed almost hopelessly belated and outclassed in its in-

PRESIDENT TAFT AND PRESIDENT HIBBEN
AT PRINCETON.

struction and equipment. But the trustees had themselves learned that fact, and the magnificent Green bequest had made it possible to bring Dr. McCosh from Ireland for the very purpose of rejuvenating the old college. Then followed gift after gift, fresh enterprise and new pride of the trustees, so that the old college would not be recognized in the new university. It has assumed the new name of university, altho it has remained little more than a college, until in these latest years the postgraduate department has been planned with fresh money to erect the buildings.

Under Dr. McCosh great things were done for the university, and this advance continued under Dr. Patten and still further under Woodrow Wilson. Under him, who was not a Presbyterian clergyman, as had been every other president since Jonathan Edwards, the break with definite Presbyterianism seemed complete. The seminary might stand still or advance unwillingly, but the university would move forward. The evidence appeared to the scholarly world in the introduction of the preceptorial system, an entirely new thing in American education and an admirable provision. With no lack of money—for Princeton has been called a rich man's college, and has resented the inference—and abundant enterprise on the part of its able trustees, Princeton has kept in public view and in the van of American schools of learning.

The inauguration of President Hibben, one of the faculty of the institution, ends the somewhat sensational dispute about the graduate school, and the discussion about democracy in the student body, which resulted against President Wilson's urgency in the location of the graduate school at a distance from the college campus and the resignation of President Wilson to be made Governor of New Jersey and candidate for the Presidency of the United States. It is noticeable that at the inauguration only one of the two living ex-presidents, Dr. Patton, was present, while Governor Wilson found other engagements which prevented him from adding his congratulations, whether as Governor of the State or as President Hibben's immediate predecessor.

But if the Governor of the State was missed, the President and the Chief Justice of the United States were there, and the representatives of all the leading universities of the country; and the new president was royally welcomed by the alumni. The inaugural address proclaimed the purpose of the university to develop manhood, assured the maintenance of the preceptorial system as a guide to manhood, and the continued guidance of the student after he had past thru the two first years of his required college course and was ready to select his optional studies selected from ordered groups and courses, and not left to be chosen miscellaneously, so as to se-

cure graduation with the minimum of labor. If there was nothing specially new in the inaugural address, it yet indicated the wise teacher who had absorbed the best results of modern instruction. We may be assured that, under such a president and such a progressive body of trustees and friends, Princeton University will maintain the pace of progress it has held under McCosh, Patton and Wilson, and will become a great university in fact, as it is in name.

The Situation in the Two Great Parties

THE contest in the Republican party for the Presidential nomination is between two men. One is now President, and he asks for a second term, to which, in our judgment, he is entitled. The other was President for seven years and a half, and he wants the office again. Let us look at the situation, which is without precedent. If a voter believes what Mr. Taft and his supporters say, he must think not only that Mr. Roosevelt is unfit to be President, but also that his election would place our cherished national institutions in danger. If, on the other hand, he believes the assertions of Mr. Roosevelt, he must hold that Mr. Taft is unfit for the office.

The President, as now described and characterized by Mr. Roosevelt, has been the helpless or consenting tool of greedy bosses, stands for rule by an oligarchy, "approves and encourages fraud," "represents the crookedest kind of a crooked deal," publishes statements which "he knows to be untrue," takes a position which "cannot be reconciled with any standard of honorable conduct," is an ingrate, and is "guilty of the grossest and most astounding hypocrisy."

Mr. Taft, who began to reply after a considerable part of this indictment had been laid before the country, asserts that Mr. Roosevelt has deliberately and intentionally misrepresented him; that the ex-President favored certain Trusts while he was in office; that, if elected, he would seek to establish a "beneficial despotism"; that the movement for his nomination presents a real danger and a great crisis in the country's history, be-

cause it seeks a third term for one who has little regard for constitutional restrictions. The leading advocates of each of these men are even more emphatic in their public assertions. For example, Secretary Knox, who was a member of Mr. Roosevelt's Cabinet, and whom the latter then called "a great Attorney General," says that the ex-President is a man "prompted by whims," a man of "imperious ambitions," of "vanities," of "mysterious antipathies," whose "new nationalism is as violent an assault upon the autonomy of the States as the new nationalism of 1861 was upon the integrity of the Union," and "who would break the rule of his party and his country to gain the seat of his friend."

Now, the friends of both these men are earnestly loyal. Mr. Roosevelt's supporters believe that the President is unfit for the office which he holds. Those who support Mr. Taft are not less firmly convinced of the unfitness of Mr. Roosevelt. If either of the two should be nominated, what course would the supporters of the unsuccessful one take? Would they vote for the nominee?

The nomination of Mr. Taft may still be predicted with some confidence. His list of delegates is affected by many contests, several of which appear to have little or no justification. Recent reports indicate that a large majority of the members of the national committee are in favor of his nomination. This committee, which begins its sessions on June 6, will prepare the temporary roll of delegates.

There is no compromise candidate in sight, unless Justice Hughes may be called one. He asserts that he is not and will not be a candidate. So far as we can learn he would not depart from this position unless the supporters of both Mr. Taft and Mr. Roosevelt should ask him to head the ticket. It does not seem probable now that such an appeal to him will be made. We are not sure that he would be acceptable to all the friends of Mr. Roosevelt. He was appointed to the Supreme Court by Mr. Taft. He took part in making a memorable Trust decision, on account of which the court has been sharply criticised by Republicans who are called Progressive and who support Mr. Roosevelt. The situation on

the Republican side in this preliminary canvass is an extraordinary one.

There are difficulties on the Democratic side, altho we do not see leading candidates bitterly attacking each other. (Mr. Bryan is not yet a candidate.) Of the four men most prominent in the race—Messrs. Clark, Wilson, Harmon and Underwood—Mr. Clark is the one who now leads. The nominee of the convention must have a two-thirds vote. It must be conceded, we think, that Mr. Bryan and his friends in the party will control more than one-third of the votes to be cast, and that for this reason no one whom they vigorously oppose can be nominated. The vigor of Mr. Bryan's opposition to Governor Harmon and Mr. Underwood has repeatedly been exhibited. It is continuously in evidence. The nomination of Speaker Clark is opposed by many Democrats, because they think his judgment is not always sound, and also for the reason that, in their opinion, he would be weak in certain great States without which the party cannot carry the election. It is unfortunate, they say, that he publicly likened President Grover Cleveland to Judas Iscariot, and then begged Judas Iscariot's pardon for having done so. Mr. Clark's foremost supporter appears to be Mr. William Randolph Hearst, who has foes in the party. Governor Wilson, having had no legislative and but brief executive service, is practically an untried man in politics, being known mainly by his historical writings and his recent political addresses.

If neither of these gentlemen should be able to gain two-thirds of the convention, Mr. Bryan would be available. But the action of the Democratic convention will depend in some measure upon that of the Republican convention, which will precede it. Mr. Bryan is on guard. As the candidate of his party in three elections he has a right so to act. If there should be a psychological moment in the course of a deadlock, when need of a harmonizer should be manifest, we presume that he would not decline to serve. And it is quite possible that he may do this with better prospects of success at the polls than he has ever had in the past.

The Meaning of Sore Throat

It is usually considered that the cold weather is responsible for them and that cold air of itself represents a distinct danger. To be out on a windy day, to sit in a draft, to get the feet wet, to sleep at night in a room that is colder than it ought to be, these are what our friends confide to us as the causes of their sore throats when they suffer from them. The whole question of the relation of cold to so-called "colds" and coughs and to the occurrence of various respiratory diseases has been revolutionized in recent years. We know now that while colds occur most frequently during the winter season they bear no definite relations to extremely cold weather. They are most frequent in damp, unsettled weather, more frequent in the temperate than in the frigid zone, occur rarely high up in mountains where the temperature is dry and cold, are seen oftener along the seashore and near lakes than in mountain regions, and nothing seems to be more curative of them than dry cold air. All this in combination with the experience that sufferers from tuberculosis are very much improved by being out in the air in mountain regions, often where the temperature is at zero or below, and with their windows open at night even during the winter time, have made physicians feel that coughs and "colds" must not be attributed simply to cold weather.

This same thing is true of sore throats. Probably the most striking evidence that we have had for this fact in recent years is the epidemic of septic sore throat, which occurred in the neighborhood of Boston last May and June, and the full report of which, from the clinical and pathological standpoints, has been recently published. At the end of May and the beginning of June is not the time when we expect an epidemic of sore throat. Altogether about 1,500 cases occurred near Boston at that time last year, however, beginning about May 15. Of these twenty-seven were fatal and a very large number were followed by rather serious complications. Not long after the beginning of the epidemic it was noted that practically all the patients were being served with the milk

of a certain large dairy. Further investigation made it very clear that this must surely be the cause of the infection. It is to the credit of that dairy company that they at once secured an expert to investigate all the conditions and to report completely just what was the cause and what the predisposing conditions to the infection. This particular dairy company was one of the first to undertake thoroughly the modern hygienic dairying and the occurrence only serves to emphasize how much of care and solicitude is needed to preserve milk from infection, and how even with all that care accidents may happen, infections may take place, contaminations may occur that will produce serious result.

Such epidemics have never been so thoroughly studied in this country before, but have been traced rather frequently abroad. Experts in Great Britain particularly insist that there is not a single year, at least for the last fifteen during which there has not been an epidemic of sore throat due to the drinking of contaminated milk. The symptoms observed over there are very like those noted in the Massachusetts epidemic. The appearance was something like an atypical scarlet fever. The tonsils and the lymphoid tissues of the fauces generally were attacked. The inflammatory symptoms were evidently due to the fact that this lymphoid tissue absorbed the infectious microorganisms so as to save them from doing worse damage perhaps in the lower digestive tract. Unfortunately the virulence of the microorganisms made it difficult for the lymphatic tissues to dispose of them and the consequence was a series of complications usually purulent in character and many of them quite severe. Some of the cervical glands suppurated, certain of the glands of the mouth became affected, the middle ear was attacked, and occasionally complications in connection with the lower digestive tract were noted.

The fatal cases tell the story of the infection very well. In spite of what might be expected at first thought, the deaths did not occur most frequently among very young children, but on the contrary, among old adults. There were only two deaths under the age of ten, one between ten and twenty, one be-

tween twenty and forty, ten between forty and sixty, and thirteen, almost half the total amount, among patients over sixty. The reason for this is not far to seek. Children are much more frequently given boiled milk than are adults and it was the weaklings among those who took milk unboiled that suffered more severely from the disease. On the Continent generally people are prone to be very much surprised to see Americans drinking raw milk. Most of them would as soon think of eating raw meat. There are many who think that the taste of raw milk is much better than after it has been boiled, but there used to be a great many in certain portions of Germany who thought that uncooked ham and uncooked beef tasted ever so much better than the same meats after cooking. They suffered from trichinosis and various forms of animal parasites until the German Government insisted on the most careful meat inspection. We have just two ways of being sure to avoid infection from milk, one by boiling it, the other by the most careful milk inspection or by the pasteurization method, which has just been enforced for all milk sold for consumption in New York City.

It would be surprising to most people to think of an epidemic of sore throat being carried by food material, for it is usually supposed to be a respiratory disease. Investigations with regard to the workmen who are employed in the sewers of London and Paris, and on the sewage farms of Berlin, led physicians to think of this mode of origin for sore throat many years ago. Ordinarily it would be presumed that those who work much in connection with sewage would, because of contamination of their hands and carelessness in various ways, suffer from gastro-intestinal diseases much more frequently than the general average of the population. Carefully prepared statistics, however, show that, on the contrary, owing to the regulations insisted on for them as regards cleanliness, they suffer much less than the average of the population from such affections. What they are prone to are particularly affections of the tonsils, the fauces and the back of the throat. More diphtheria occurs among them. Various forms of putrid or septic sore throat are

seen that are rare among the general population. It is evident that in various ways some of the infectious material gets into their mouths, and the natural guardians of the body in the throat absorb them in order to counteract their influence for ill and suffer as a consequence. Scouts and outposts usually have to bear the brunt of the action if there is an unexpected attack by the enemy in force.

The recent epidemic, then, is an excellent lesson in hygiene. It is not cold air, but infected air or infected material of some kind, and much oftener very probably food material than anything in the air that causes sore throat. Patients suffer from sore throat after having been in crowded cars rebreathing others' air, or in crowded theaters or meeting places. Ordinarily, however, the physician would like to know just what kind of material they have been eating or drinking, for this might throw some light on the etiology of their affection. If the Boston epidemic will serve to emphasize what is now so well recognized, that the best possible protective, as also the best possible remedy against affections of the sore throat is fresh cold air, night and day, it will not have been too costly.

To Lengthen the Presidential Term

Again and again has the proposition been made to lengthen the term of the President of the United States from four to six years, without right to re-election, but nothing has come of it. Now the effort of Mr. Roosevelt to prevent the re-election of Mr. Taft to a second term, and to secure a third term for himself, has called attention to the desirability of such an amendment to the Constitution, and Mr. Clayton, of Alabama, has presented such a resolution. We trust it will be adopted by both Houses of Congress, and we believe it would find little difficulty in being adopted by the State legislatures. The present unhappy contest between the President and the ex-President offends public sentiment, if not decency also; and it calls for a remedy which will prevent such scandal in the future. At the best a Presidential election is a disturbing factor, and a six-year term

would relieve the disturbance by half. Equally the knowledge that a President could enjoy but a single term would save him the indelicacy of suing for re-election, and would remove the possible danger which might come from some popular demagog at some future time fixing himself on the nation as Diaz did in Mexico. It will be remembered that Jefferson, Madison and Andrew Jackson all urged a single six-year term, so that the proposition is nothing new.

President Taft and the Catholic Church

It has been over and over again asserted as against President Taft that he has unduly favored the Catholic Church, and especially it has been declared that he sent Major Butt to Rome as a special messenger for some purpose—it was not exactly clear what—but with the view of getting the Catholic vote. This last has been denied, but still has been believed, and now the President makes a formal denial. He says that Major Butt went for his own pleasure solely, that he wished to be presented to the Pope, and that the President gave him a simple letter of introduction, nothing more. He then explains his suspension of the order of the Commissioner of Indian Affairs forbidding the wearing of religious garb by teachers of Indian schools, because it was made without waiting for the decision on the question of the Secretary of the Interior, and it was right that the matter should be carefully examined into, as the order would remove over thirty teachers. The President declares that his desire has been to aid all useful religious work, but to show partiality to none. It appears to us that both President Taft and President Roosevelt have been careful not to offend Catholic sensibilities, and to give the Catholic Church all they properly could of favor; but we should be very slow to believe that either of them has meant to do an injustice or to contravene the established principle of our Government, which separates Church and State. Mr. Taft did not send Major Butt to see the Pope; he did not send a wireless message of welcome to the new Apostolic Delegate; and he did not concern himself with the silly question of Cardinal-

ital precedence. These denials are absolute and conclusive.

The Mississippi Flood

Probably many more people have been killed by the breaking of the levees on the Mississippi than died on the "Titanic," but not so many people of distinction, and the conditions, altho terrible, were not so spectacular. The water that broke thru so disastrously is interstate water, and so comes under the purview of Congress under our Constitution. It is the business of the nation as well as of Louisiana to see to it that the levees are high and strong, and it was supposed, until this unprecedented flood, that protection had been amply provided by the Government. Now the levees will have to be repaired and strengthened, and built even higher. The levees are not just at the banks of the river, but sometimes miles back of the river bed. There would have been much more loss of life but for the precautions taken by those who must live within the region of possible overflow. There are marks set to indicate the height of previous floods, and the houses are built on pillars, sometimes so high that a team can be driven under the house, so that they are raised like the old lake dwellings. The river recedes rapidly, leaving a rich sediment, as in the Nile; and before the water is all gone the planters go over their plantations in rafts and pole about, dropping cotton seed, which in a few days springs up. Thus the flood is not wholly a calamity.

Investigating the Disaster

We fear we must admit that the investigation of the "Titanic" disaster made in this country appears to have been carried on along less important lines than in England. Senator Smith's purpose seemed to be to learn why we did not get the news sooner from the "Carpathia," while the English commission is seeking to learn why the ship went down, and why so many lost their lives. Of all the new facts brought out in London, the most astonishing is that after the captain had closed the watertight compartments the chief engineer ordered them opened, so that the men might reach the pumps. That four watertight bulkheads were left open, and

for aught we know but for this terrible blunder the vessel might have floated, at least for some hours until help should come. Why should not this have been learned in the investigation here when all the sailors were at hand to be examined? We can hardly call this horrible disaster the act of God when the vessel was driven at full speed against an iceberg in a known ice-field, and the boats were insufficient, and the sailors had received no drill, and the water-tight compartments were opened wide. There were preventable blunders on every side.

Potash salts are attracting much attention in the United States just now, following the dispute between the German producers and the American consumers last year, which served to call attention to the fact that we are dependent upon Germany for our supply. As a result Congress has made appropriations for the conducting of a search for supplies of potash in America by both the Bureau of Soils of the Department of Agriculture and the United States Geological Survey. The resulting competition between the two bureaus to be the first to get results has been unprofitable. To date the drilling in the bed of ancient Lake Lahontan (near Fallon, Nevada) produced nothing, tho not yet completed. A deposit of alunite has been discovered near Marysville, Utah, but information as to how to produce potash salts from alunite on a commercial scale is still absent. To the April number of *Cassier's Magazine*, G. E. Mitchell, of the Geological Survey, contributes an article on the Leucite Hills of Wyoming, which contains nothing new. The Leucite Hills, in the Red Desert of south-central Wyoming, have been extensively studied and their characteristics are well known to geologists. The leucite-bearing rocks do indeed contain about 10 per cent. of potassium suboxid, but unfortunately, so far as chemical technology is at present developed, it is of no more value as a source of potash salts than the alumina of clays is a source of aluminum. But the worst flash in the pan was the recent announcement of Survey officials that they had discovered a lake, containing 4,000,000 to 10,000,000 tons of potassium suboxid in solution, in the northwestern part of San

Bernardino County, California, which would serve as a source of supply for the whole United States for thirty to fifty years to come. The facts of the matter are that, while the lake does contain potash salts of an unknown but presumably large amount, it is completely held by patent or location by the California Trona Company, which had thoroly tested the deposits and discovered their nature some months before. The property is now held under mortgage by the Foreign Mine Development Company, backed by English capital, and negotiations had been under way for the sale of the property as a potash producer months before the Survey "discovered" it. As a matter of fact, the potash apparently occurs in solution as potassium chlorid, associated with larger amounts of sodium chlorid and sodium carbonate, and it is open to grave doubt whether potash salts can here be produced at a profit. The profits of the German producers are large, and, as soon as any serious danger of losing the American market developed, a cut in prices would sweep the infant American industry off its feet.

Delay in Church Union An effort to unite denominations is always a difficult one, because a fighting minority can often delay the movement which the majority desire. For about a dozen years the Methodists, Presbyterians and Congregationalists of Canada have been devising union, and a satisfactory plan was presented by the committees in charge. At last it was presented for final adoption to the three denominations. The opposition in the Methodist Church was only 12 per cent., and 20 per cent. with the Congregationalists; but when it came to a vote in the Presbyterian Church 28½ per cent. of the elders voted against it, and of the members and adherents 150,000 voted for union, and 65,000 opposed it. Not only so, but a number of them threatened litigation and schism, so that it was concluded to be better to abandon the plan for the present. It is very much such a case as we had with the Congregationalists, United Brethren and Methodist Protestants in this country a few years ago. The majority favored the plan of union, but a comparatively small majority among the Congre-

gationalists were frightened and hostile, afraid something awful—nobody knew what—might happen if they ventured to trust their brethren of other names. In this Canadian case it is the fear of Wesleyanism—which is Arminianism, which is Socinianism, which is Arianism, which is heresy and antichrist; therefore keep up the schism. What is needed is not so much to give these recalcitrants Christian charity as it is common sense, and to teach the majority to go forward as did the Presbyterians of Scotland, and let the minority do their worst.

The Home Rule Bill The Home Rule bill has past its second reading, and been carried by a majority of 101 in an extraordinarily full House. That is a safe majority and assures its final passage by the House of Commons two months hence. Then it will have to go to the House of Lords, where it is equally sure to be rejected. But that will not be the end of it. The Commons will then re-enact it, and after two years of struggle between the two Houses the bill will become a law without the approval of the Lords. But that will require that the present Liberal Government be not overturned in the meantime and supplanted by a Unionist Parliament. This we do not anticipate. The Liberals have a majority sufficient to hold their own against any attempt of defeat. Meanwhile Mr. Asquith's Government has in hand, simultaneously with the Home Rule bill, the bill to disestablish the Church of England in Wales. This also is sure to pass, altho the Welsh bishops are making a loud complaint and protest. But what is the use? The Welsh people do not want the Established Church. Disestablishment has worked wonders for the Anglican Church in Ireland, and there is no reasonable doubt that it would be in a much better position to seek the favor of the people of Wales if it stood out on even terms with Baptists and Wesleyans. While these important political movements are going on, the Conservatives and their Unionist brethren who left Gladstone and the Whigs have buried their rusty hatchets in the Irish Channel, and are drinking out of the same loving cup, and call themselves National Union-

ists. It is noticeable that while Ulster on the Home Rule bill, and the Church papers on the disestablishment bill, are tearing passions to tatters, the English people as a whole show little interest, and refuse to get excited. Here is an augury of success.

It is a splendid list of works accomplished which President Taft recounts in his telegram to the voters of California, particularly calling attention to policies that interest them. He includes the Panama Pacific Exposition, conservation, the increase of our international and Philippine trade, the Employees' Liability act, the complete regulation of interstate commerce, the Postal Savings Bank bill, the Mining Bureau bill, the Tariff Commission, the change from a \$50,000,000 deficit to a \$40,000,000 surplus, the corporation tax, the Children's Bureau bill, the peace treaties with England and France, emasculated thru the efforts of Mr. Roosevelt, the completing of the Panama Canal, the impartial enforcement of law against corporations and trusts, and, latest, the Workmen's Compensation bill. The simple list makes an effective appeal.

It is not a bad plan organized by the Catholic Colonization Society of Chicago to establish central agencies in Europe for the purpose of directing Catholic immigrants to settle in agricultural colonies where land can be obtained from railroads or companies, and where each colony of five hundred or so will be supplied with a church and a school. In this way they will be more likely to be held to the Church than if they went to Argentina or any other Catholic country of South America. It is claimed that most of the 500,000 Catholic immigrants every year are skilled agriculturists, and it is a great waste of labor that they here settle in cities and become day laborers.

The late decision of the Supreme Court of New Hampshire leaves the property of Mrs. Eddy to the First Church of Christ, Scientist, in Boston. It amounts to \$2,000,000, and thus perpetuates the denomination in Boston, and very likely makes it not worth perpetu-

ating. A big property owned by a church, which provides for all expenses, is no advantage for real church purposes, but tends to selfishness and niggardliness. Nor is the financial power and consequent authority of the central church likely to tend to unity elsewhere. Already there are signs of division with resentment of control.

Did Lombroso leave an unpublished paper in which he says that all Americans are neurasthenics? So he is quoted:

"Strenuous work and alcoholic stimulants have in thirty years caused every citizen of the United States to become a neurasthenic, and the same effects are being produced in the more civilized parts of Europe."

But there is less alcohol per man drunk now than a generation ago, and it would be absurd to call the great bulk of the men one meets in business in our cities in any sense neurasthenic.

We do not see how the British court could have been more lenient than it was in sentencing Tom Mann to six months imprisonment without hard labor. His offense was in urging soldiers sent to quell violence at strikes to refuse to obey orders. That was inciting to mutiny in the interest of lawless anarchy. He says that to obey orders would be to shoot our brothers. Not unless the brothers were guilty of crime.

The action of the House of Representatives in refusing an appropriation to carry on the Court of Commerce really abolishes it after a year's existence, because some of its decisions do not please the majority. It is a very unfortunate action, and is aided by the attack on the personal probity of one of its judges.

Not a single vessel flying the stars and stripes entered the port of London last year. The disgrace of that fact rests on Congress, which refuses to allow American merchants to buy a ship where they can buy it cheapest and then carry the flag.

The School Board of Philadelphia have taken action to abolish all high school fraternities. We commend their excellent example to other cities.

FINANCIAL

New York's Bond Sale

The city of New York sold, last week, \$65,000,000 of fifty-year $4\frac{1}{4}$ per cent. bonds. This was the largest sale of the kind ever made by the municipality. Subscriptions for four times the amount were received, from 372 bidders, and 265 of these were successful. The average price paid by them was 100.747, which makes an income basis of 4.21 per cent. The average price paid at a sale of \$60,000,000 in January of last year was a little higher, 100.904. This time the lowest successful bid was 100.579, while the highest was 102, but for only \$500. A group composed of J. P. Morgan & Co., the First National Bank and the National City Bank bid 100.4907 for all or none, and got none. To Kuhn, Loeb & Co., on bids ranging from 100.252 to 100.702, the award was \$11,000,000. Harvey Fisk & Sons and A. B. Leach & Co. received \$10,200,000, and \$6,000,000 went to the Guaranty Trust Company. Awards to savings banks amounted to about \$4,000,000. The interest rate on New York City bonds has risen in recent years from $3\frac{1}{2}$ to $4\frac{1}{4}$ per cent. Prior to 1905 the average income rate realized by buyers was less than $3\frac{1}{2}$ per cent. The average rate on first class securities of this kind has been rising all over the world.

May Crop Report

THE Government's May crop report was not a favorable one. Winter wheat's condition at the beginning of the month was only 79.7, against 86.1 one year ago and a ten years' average of 85.2. But the most depressing part of the report was that which showed that 6,469,000 acres had been winter-killed and abandoned. This is 20 per cent. of the area sown last fall, and the loss of these acres leaves only 25,744,000, the smallest winter wheat area since 1899. A new record is made by this loss, for the largest in preceding years was 4,933,000 acres, in 1904. The States which suffer most, with the percentage abandoned in each, are as follows: Illinois, 53.5; Indiana, 46.5; Ohio, 45.2; Michigan, 26. These States this year will produce 40,000,000

bushels less than they need for home consumption; last year they had enough and 30,000,000 bushels to spare. The crop of winter wheat indicated by the report is 370,714,000 bushels; 430,656,000 bushels were harvested in 1911. It is well known, of course, that the greater part of the winter-killed wheat is plowed under, and that other cereals, generally corn or oats, are planted in place of it. This reduces the farmers' loss. The report shows that rye is in fairly good condition, 87.5, against an average of 89.2. An exceptionally backward season is indicated by the statement that on May 1 only 52.8 per cent. of the spring plowing had been done, against 71 per cent. last year and a ten year's average of 67.6. And for spring planting the figures are 48.9 per cent., against 60 per cent. in 1911. This crop report had no perceptible effect upon general business, which continues to be in healthy condition and characterized by reasonable conservatism.

The Executive Council of the American Bankers' Association, at its spring meeting, last week, adopted resolutions pledging the association's hearty support to projects and legislation for the promotion of farm development, and urging the passage by Congress of pending bills for field demonstration. In twenty-three States there are now Bankers' Agricultural Committees, and the Executive Council promises that there shall soon be such a committee in every other State.

New Home of the First National Bank of Philadelphia

SINCE January 2, 1865, the First National Bank of Philadelphia has had its home at No. 315 Chestnut street. The old St. Louis Hotel formerly occupied the site. The bank was originally located on the southeast corner of Third and Chestnut streets. It enjoys the distinction of being the first bank chartered under the national banking act of 1863. Each national bank has a charter number which the Comptroller of the Currency requires it to use upon its stationery. The First National Bank of Philadelphia uses No. 1, as it has charter No. 1. This bank was also the first to issue national

FIRST NATIONAL BANK OF PHILADELPHIA
General view of the interior

currency and was appointed the first United States depository. Its original capital was \$150,000, increased four months later to \$500,000, and in January, 1864, to \$1,000,000. In July, 1910, when the Merchants' National Bank was merged, the capital was made \$1,500,000. Among the charter stockholders were such well-known Philadelphians as A. J. Drexel, Jay Cooke, C. H. Clark and Stephen Caldwell. In the forty-nine years of the bank's history there have been but four presidents—C. H. Clark served from 1863 to 1874; George Philler from 1874 to 1904; Morton McMichael from January to March, 1904, and J. Tatnall Lea from 1904 to date.

The original building was planned by John McArthur, Jr., who was the architect for the United States Post Office Building in Philadelphia. The alterations and additions have been made under the supervision of John T. Windrim, the official architect for the Girard estate. The new building is recognized as one of the most complete banking plants in

the United States. Altho an exclusive banking building, it is five floors in high. The old granite front and original banking room have been retained, but all modern conveniences added in the way of equipment, such as fireproof metal furniture, electric elevators, pneumatic tubes, vacuum cleaners, refrigerating plant, and modern heating and ventilating systems, with locker rooms, lavatories, and dining rooms for employees. The gray tones of the interior decoration increase the light in the banking room and harmonize agreeably with the mahogany woodwork and the Italian marble which has been used in the wainscoting, railings and counters.

The last statement issued by the bank gives its total resources as \$30,908,448. The surplus and undivided profits are \$1,620,950 and the deposits \$26,787,501. The present officers are: J. Tatnall Lea, president; William A. Law, first vice-president; Kenton Warne, second vice-president, and Thomas W. Andrew, cashier.

INSURANCE

A Notable Concession

DURING recent years there has been a decided tendency on the part of that factor in our civilization which is designated, "public policy," away from the custom once quite prevalent, of permitting capital to use the system of life insurance as a profit-making enterprise. The individual man who gives the subject any consideration at all, does not know that a properly constituted and capably managed life insurance company, once going, has no need of capital funds; and yet the mass of the population, in some inexplicable and mysterious way, is dumbly conscious of the fact. There was a time in the history of the business when it was not nearly so difficult as it is now to equip and start a company without capital, as our oldest and largest institutions evidence.

It is therefore gratifying to note from time to time the disposition evinced by a few of the most successful stock companies to reduce, as far as reason may require, the tax which the invested or accumulated capital levies on the policyholders. Quite the most distinctive movement of this kind is that which the management of the Prudential Insurance Company of America, whose home office is at Newark, N. J., inaugurated several years ago for distributing among its policyholders some sixteen or eighteen millions of accumulated surplus, and which was vigorously contested in the New Jersey courts by a coterie of minority stockholders. The management of the company very properly contended that the stockholders had in the past received handsome returns on their invested capital; that they would continue to receive a reasonable income on it in the future; and that, as the policyholders, by paying much more than adequate premiums, had made the splendid success the company had achieved possible, it was but just to them that the overplus should now revert to them. The litigation finally got to the Supreme Court of the State, which upheld the views expressed by the management.

As the result of this decision, the

policyholders of the Prudential will get these millions of surplus, which the management for several years past has stood ready voluntarily to surrender to them—an action that becomes notable in the face of the fact that the policy contracts are of the non-participating kind, which means that they provide for the payment of no dividends to policyholders at all.

IF THE INDEPENDENT has frequently considered the problem of policy loans, that is because of the sinister importance of the subject. Today, however, the right view is coming to be the general view: whether or not men will live up to it. The thirty-third annual report of the Fidelity Mutual Life Insurance Company of Philadelphia devotes two paragraphs to this vital subject:

"When a man takes out a policy of insurance he creates an estate of just that amount. The moment he places a loan against his policy, that moment he takes a step backward. Unfortunately, he is not the greatest sufferer. Often the transaction is unknown to the family until a death claim is entered, and it develops that the policy has been mortgaged.

"The rule adopted by the Fidelity of accepting instalments as low as five dollars has, we are glad to say, encouraged a number of policyholders to repay their loans, \$70,968.39 having been repaid in 1911"

THE frame furniture plant of the Estey Manufacturing Company, at Owosso, Mich., was blown down by a windstorm. The values were protected by \$90,000 of fire insurance, but the proprietor had refused to carry windstorm insurance, and so his loss is heavy. About \$50,000 of values were saved, and the insurance on the stock has been transferred to another location. Public meetings have been held to help out the concern by public subscriptions of new stock. One result should be to make Owosso and vicinity a fertile field for tornado insurance.

THE United States headquarters of the General Accident Assurance Corporation of Perth, Scotland, were removed from Philadelphia to New York on March 31.

The Independent

VOL. LXXII NEW YORK, THURSDAY, MAY 23, 1912

No. 3312

Survey of the World

National Politics In California, on the 14th, Mr. Roosevelt carried the primary elections by a large majority, having about twice as many votes as were given to the President, and three times the number cast for Senator La Follette. Speaker Clark was the choice of the Democrats. Mr. Taft had sent an appeal to the Republican men and women of the State, reviewing the record of his administration. Mr. Roosevelt, he said, was not giving him a square deal, but was appealing to class hatred and forcing sham issues. Women prominent in the suffrage movement in the East sent messages urging the women of California to oppose the President. After the result in California was known, the contest in Ohio excited much interest. In Mr. Taft's own State he and Mr. Roosevelt were making several speeches every day. The President asserted that Mr. Roosevelt was an egotist and a demagog. Mr. Roosevelt used epithets in his replies. All the assertions which had been made by the two in other States were repeated, but with additional emphasis and many bitter words. A new statement about the Harvester Trust was published by Mr. Hilles, the President's secretary, the substance of it being that Mr. Townsend, the attorney who had prepared, as an assistant of Attorney-General Bonaparte, to sue the company, had been restrained on account of the arguments addressed to Mr. Roosevelt by Mr. Perkins, and that the Attorney-General then appeared to be offended because his own influence with the President had been overcome by the Trust's representatives. Certain utterances of Mr. Roosevelt were regarded as indicating his purpose

to bolt the nomination of Mr. Taft, altho the ex-President repeatedly claimed that he himself had so many delegates that he would surely be nominated on the first ballot. The President, he said, was striving to win by fraud, and if he should so win, honest Republicans could no longer respect the action of the convention. A nomination gained in that way would "mean the ruin of the Republican party." Before the end of the week Mr. Taft claimed 559 votes, or more than a majority, and Mr. Roosevelt claimed 500. On the 20th Mr. Taft published a statement. The certainty of Mr. Roosevelt's defeat, he said, must be a source of profound congratulation to all patriotic citizens, who could see "the utter wreck he would have made of the party if nominated, and the great danger to which the country would have been exposed if there had been any chance of his election for a third term." Mr. Roosevelt asserted, he continued, that he was the Republican party, and that if the convention should ignore his "flimsy contests" he would not abide by its judgment. The inference was that he would bolt:

"With clearly traceable premeditation he projected contests without the slightest reason therefor, in many cases weeks after the regular conventions had been held, merely to make a basis for a campaign of bluff and bluster. Now he threatens that unless this campaign thus carried on is to be recognized as successful and unless honestly elected delegates shall be thrown out in sufficient numbers to give him a majority he will break from the party and try to ruin that which he cannot rule. I appeal to all Republicans to say whether a man who assumes this attitude does not forfeit his claim to any right to become a candidate in a Republican convention. Honored with the nomination to the Presidency by that party, and with the most sacred obligations

resting upon him to be loyal to its organization, to respect the rules governing its national convention, and to recognize the authority of the committees duly appointed under its traditional policy, he flouts in advance the decision of all these and announces that unless he is to be nominated the interest of the party and the interest of its members are to be sacrificed, and only his selfish ambition is to be consulted. It cannot be that Republicans will countenance such a breach of party fealty, such treason to the party's properly constituted government, and such defiance of the will of its majority."

Senator La Follette, who was also making speeches in Ohio, published the list of the contributors to his campaign fund, and demanded that Mr. Roosevelt, to whom he is clearly hostile, should follow this example. We give the figures in our editorial pages. In St. Louis and elsewhere leagues of anti-third term Republicans were formed, the members promising not to vote for Mr. Roosevelt if he should be nominated.—On the Democratic side there was no excitement. Mr. Clark was steadily increasing his lead. Governor Harmon replied at length and with sarcasm to the attacks made upon him by Mr. Bryan. The latter, he said, twitted him with disappointment in the selection of delegates. "I would rather take a disappointment from my party in its nominations than inflict disappointments on it in elections. Tho I have been five times its candidate, I have never disappointed it yet." Mr. Bryan had predicted certain failure if he should be nominated for the Presidency, but he did not think Mr. Bryan had "shown himself qualified to pick a winner."—The Socialist party has nominated Eugene V. Debs for President and Emil Seidel, ex-Mayor of Milwaukee, for Vice-President.

Congress A constitutional amendment providing for direct election of United States Senators now goes to the States for approval or rejection. The House, last week, by a vote of 237 to 39, passed the joint resolution which the Senate had passed. All the negative votes were those of Democrats. The approval of thirty-six of the forty-eight States is now required. Massachusetts has been the first to act. On the 17th the Massachusetts House approved the amendment by acclama-

tion.—The Senate Committee on the Judiciary has decided to report favorably a resolution for a constitutional amendment making the Presidential term six years, both the President and the Vice-President to be ineligible for re-election.—The anti-injunction bill, which is approved by President Gompers and Secretary Morrison of the Federation of Labor, was passed in the House last week by a vote of 244 to 31. It prohibits the granting of injunctions without notice to the persons affected. Injunctions so granted are to be effective for only seven days and to be renewable only when the court is convinced that the action is necessary. Peaceful picketing is protected.—The Democrats of the Senate have decided to insist that action upon the pending House tariff bills be taken before adjournment. A substitute for the House sugar and excise tax bill has been reported by the Republicans of the Finance Committee. It is said that the regular Republicans are inclined to allow the passage of the House bills, expecting that the President will veto them.

Trust Cases The House Banking and Currency Committee, engaged in the Money Trust inquiry, took the testimony on the 16th, of Herman Sielcken, a prominent coffee merchant, with respect to Brazil's valorization plan concerning coffee and the loans made in support of that plan. Two days later, the Government began suit in New York against eight defendants identified with the plan, alleging that the Sherman act had been violated. The court was asked to restrain the defendants from disposing of 950,000 bags of Rio coffee stored in New York, to appoint a receiver, and to order a sale of the coffee. When the State of Sao Paulo and the Brazilian Government decided to buy and hold 10,000,000 bags, because large crops had made the price very low, \$75,000,000 was borrowed—\$65,000,000 from European bankers and \$10,000,000 from a New York syndicate composed of the National City Bank, J. P. Morgan & Co. and the First National Bank. Seven persons, represent-

ing the lenders and Brazil, were appointed a committee to supervise the gradual sale of the stored coffee. Mr. Sielcken was one of these. He and his foreign associates are defendants in the suit, and the 950,000 bags of coffee are a part of the coffee withheld from the market by Brazil and Sao Paulo. Since the plan was adopted, several years ago, the price of Rio coffee has doubled.—Testimony was taken last week in the suits for the dissolution of the Steel Corporation and the Sugar Trust. Much of it was a repetition of what has been brought out by recent official investigations.—The Government and the Powder Trust have agreed as to the decree which is to cause dissolution.—Suit against the Aluminum Company of America, or Aluminum Trust, was begun on the 16th, but the company had already agreed with the Government as to a reorganization in lawful form.

Labor Controversies The convention of delegates representing the union of anthracite coal miners decided, on the 18th, by a vote of 323 to 64, to accept the agreement made by their officers with the companies. At first there was much opposition, but the convention was urged to accept by President White and ex-President Lewis, the former pointing out that the union's fund was small and that the number of members had fallen to less than 30,000. It was agreed that the men should resume work on the 22d. The wage increase is 10 per cent., but abolition of the sliding scale makes the net gain only 5½ per cent. This decision affects 170,000 men.—A committee representing fifty Eastern railroads is considering the demands recently made by the firemen.—Chicago's striking freight handlers promise that a general strike of such workmen thruout the country shall be ordered.—The printers in Chicago have voted not to go on strike in sympathy with the pressmen, who recently quit work. They decline to break existing contracts. Pressmen in New York have reached a similar decision.—Strikes of waiters in two or three prominent hotels of New York have led to the presentation of a long

list of demands by the union, and these the Association of Hotel Keepers is considering.—At San Diego, Cal., on the 15th, Ben Reitman, an associate of Emma Goldman, who had accompanied her to that city, where both proposed to take part in the controversy excited by the Industrial Workers of the World, was taken from a hotel, carried 20 miles in an automobile, and then tarred, feathered and branded. Miss Goldman was forced to leave the city. By instructions from Washington, the district attorney is making an investigation, and a report as to the situation in San Diego has been submitted to Governor Johnson by a commissioner whom he sent to the place.

Philippine Islands W. Cameron Forbes, Governor-General of the Philippines, was the guest of honor at a dinner in New York, last week, and a letter from the President was read. Mr. Taft said:

"It needs a good many years in which to vindicate the course we have taken to fit the Philippine people to assume the responsibilities of complete self-government. Were we now, or within a short time, to leave the islands, we should leave them under conditions which would rapidly bring about chaos, and the good we have done there would largely be lost."

Governor Forbes spoke of the growing prosperity of the islands, due to our recent tariff legislation. Wages had been increased. It was not true that the Filipino would not work. Formerly he was required to work for almost nothing; under favorable conditions he would work satisfactorily.—The net profits from seignorage in Philippine coinage operations, and from interest on deposits of gold reserve in recent years, exceed \$10,000,000, and out of these profits has been built up a gold standard fund of \$10,308,577, which is 46 per cent. of the insular currency in circulation.

Mexico After the battle at Conejos, on the 12th, when, according to the Federal commander, the rebels lost 2,000 in killed, wounded and desertions, Orozco retreated northward, making his headquarters at Jiminez, 92 miles from Torreon, while his main army held a strong position at Rellano, within 57

miles of that city. He admitted his defeat, but said this was only the beginning of the fight. He relied upon Campa, who with 1,500 men had made a flank movement and was southwest of Torreon. But Campa was checked, and is said to be surrounded at the mining camp of Velardena. The Federals moved northward slowly, as Orozco had burned all the bridges. Marches were made at night, owing to the heat. The country is a desert. It was the Federal commander's purpose to drive Orozco back to Chihuahua and capture Juarez. At the beginning of the present week, little had been done. Orozco was still retreating. It is asserted that Salazar, one of his officers, suffered a great defeat week before last at Cuatro Cienegas, south of Eagle Pass; that his army of 2,000 was trapped in a cañon; that 800 were killed and so many wounded that he took only 500 back to Orozco. Gomez, whose assumption of the Presidency was repudiated by Orozco, has returned to San Antonio. Enrile, Orozco's man of finance, was stabbed thrice in Chihuahua, last week, and his assailants escaped. Dispatches from that city say it was believed that he was the representative of Reyes, Limantour and Terrazas, who were supplying funds for Orozco. But the latter had thrown him aside. In the Senate at Washington, last week, Mr. Fall, of New Mexico, had placed in the *Record* a long statement made by Peter F. Aitken, now in jail at El Paso for smuggling arms across the border. Aitken asserts that he was employed by the Japanese as a spy in the war with Russia; that he was recently so employed by Orozco; that Orozco's support comes from Japan; that he witnessed the signing of agreements at Chihuahua on March 9 by Orozco and agents of Japan, and that Japan is to get valuable concessions if Orozco is successful. Little or no weight is given to this tale by the press. Madero asks the Mexican Congress for a law permitting the execution of persons who attack trains or injure railway tracks or telegraph lines. The transport "Buford" sailed northward from Salina Cruz, on the 19th, with 399 American refugees on board. John Barrett, director-general of the Pan-Ameri-

can Union, in an address at New York last week said there was a mighty peril in intervention, which might be caused by the loose talk of speakers and writers. Intervention would be the beginning of an endless war. All the countries of Latin America would become hostile to us and our loss in influence and trade would be great.

South and Central America

At the recent battle in Paraguay, when the Government forces routed the revolutionists, their leader, Colonel Jara, formerly President, was captured, and in a short time he died of his wounds. His death ends the revolt. Eight hundred rebels were killed and two German military instructors. — Our Government has been informed that Cipriano Castro, the deposed President of Venezuela, now in the Canary Islands, is so disabled by chronic disease that he can never again take an active part in any political movement. — A revolt in the Brazilian province of Acre has driven out the Prefect, General Araipe. In one battle seventy were killed. The revolutionists proclaimed the independence of the province. — Our Government has urged Ecuador to satisfy the just demands of the American owners of the railroad which extends from Guayaquil to Quito. Payment is due for carrying troops and the subvention has been withheld. Followers of Alfaro, who was killed at the end of the recent revolution, have started a new revolt in the southern part of the country. — The Pearson firm, in which Lord Cowdray is prominent, has won the contract for improving the port of Valparaiso. Seven years will be required and the cost will be \$13,000,000. — Forest fires on the Pacific coast of Costa Rica have destroyed fifteen villages. Twenty lives were lost. — Santo Domingo's customs receipts, collected under American supervision, were \$995,751 in the first quarter of the present year, or \$205,000 more than in the corresponding quarter of 1911. A large part of the money is deposited in New York to pay the foreign debt. — On May 1, only 26,836,494 cubic yards remained to be excavated on the route of

the Panama Canal; 93 per cent. of the work on the Gatun locks had been done, with 92 per cent. at the Pedro and Miguel locks, and 61 per cent. at Miraflores. The sluice gates at the Gatun dam were closed, and the great lake began to form. The canal expenditures thus far have been \$251,376,491.—There were political riots in Panama last week. One man was killed and several prominent persons were arrested. At the request of both parties, President Taft has appointed Minister Dodge, Colonel Goethals and the commander of our infantry garrison a commission to supervise the registration and the coming election.

The "Titanic" Case At the Board of Trade's inquiry last week the fact was brought out that the Leyland Line steamship "Californian" saw rockets fired upon the night the "Titanic" sank. The captain insists that the vessel in distress, about five miles distant, was not so large as the White Star liner. One witness testified that he took the unknown ship for a "tramp." The third officer of the "Californian," however, testified that he recognized the ship for a passenger vessel, and that his captain knew the "Titanic" to be the only passenger vessel near by. The inquiry has also brought out the fact that Sir Cosmo Duff-Gordon's solicitor advised one of the members of the lifeboat crew what testimony he should give about the alleged refusal of certain passengers to take on passengers who were in the sea near the "Titanic."—J. Bruce Ismay has offered to contribute \$50,000 and Mrs. Ismay has offered the same sum to found a pension fund for the widows of those who have lost their lives at sea while serving on British merchant vessels. No pension is to exceed \$100 a year.—The scout cruiser "Birmingham," of the United States navy, has been ordered from Philadelphia to make a comprehensive study of the ice fields in the track of transatlantic navigation. Reports of the position of ice packs and bergs will be made by wireless as frequently as possible. An international patrol of the danger zone may be established.

A New King of Denmark

Frederick VIII, the King of Denmark, returning from Nice to Copenhagen, died in one of the streets of Hamburg on the night of May 14. His body was unrecognized and carried to the morgue, where it was identified by members of his suite. At first it was announced that he had died in bed at his hotel. Frederick VIII was born June 3, 1843. He has ruled since 1906. He was married in 1869 to a daughter of Charles XV, King of Sweden, and had eight children. The Crown Prince Christian,

CHRISTIAN X
The New King of Denmark

who will rule as Christian X, was born in 1870, was brought up with simplicity, and married in 1898 Alexandrina, daughter of Frederick Francis III, Grand Duke of Mecklenburg-Schwerin. Christian's younger brother, Charles, married his cousin Maud, a daughter of Edward VII of England, and is King of Norway, bearing the title Haakon VII. The late King of Denmark was democratic in his sympathies and manners, and was popular with his subjects, as his son is said to be. Christian X is a well built man and

an athlete, and loves the army. He has two sons.—The body of the late King reached Copenhagen on May 17. The funeral will occur on May 24, in the Cathedral. The late King was related to many royal houses.

Attacks on the Kaiser The German Emperor is reported to have declared at a banquet in Strasburg that he would incorporate Alsace-Lorraine into Prussia, and to have said: "I'll smash your constitution into little pieces!" The Socialist, Philip Scheidemann, criticised this in the Reichstag as "a momentous confession," being a threat of "the most severe punishment that can be inflicted upon a people—a punishment like imprisonment and the forfeiture of civil rights." He added that "it is now a matter of shame to be a Prussian," Prussia being "a German Siberia." Conservatives cried out "Shame!" at this, and the Ministers quitted the chamber. Later the Chancellor tried to explain away the Emperor's Alsatian indiscretion, which was due to his wrath at the conduct of the newly established Parliament. It is the old question of the repression of French patriotism in the "Lost Provinces" which provoked the Kaiser's anger. French sentiment there has been enraged by the recent maneuvers of military aeroplanes under the command of Prince Henry on the frontier.—Kaiser Wilhelm has also come in for severe criticism in the discussions of army duelling. The Socialist Ledebour has declared in the Reichstag that those who recognize duelling not only violate the penal code, but are of a low moral level. The man who rejects duelling for himself and his family, while as a ruler he forces others to fight, is of the very lowest morality. The president of the Reichstag rebuked the speaker for his allusions to His Majesty.—The Reichstag on May 13 adopted the proposals for the naval increase under the estimates of 1912-1913. This means a continuation of the policy of naval extension, and the German navy will soon rank above that of the United States. They are now ranked as equal. The Socialists in the Reichstag voted solidly against the bill.—The new battleship "Goeben" developed on her trial

trips, under forced draft, what is said to be a speed record for great warships: over 30 knots an hour.—Baron von Bieberstein, the new Ambassador of Germany to Great Britain, will receive a salary of \$37,500, the highest amount paid to any official of the German Government, with the exception of the Kaiser. At Constantinople Von Bieberstein received \$30,000, which is the salary of the German Ambassadors at Vienna, Paris and Washington. France is uneasy at the evident intention of Germany to win English friendship.—Count Stuerghk, Austrian Prime Minister since November, 1911, was suddenly stricken with blindness on May 15.

Crime in France The "Villa Bonheur," in Nogent, three miles from Paris, where the two remaining members of the automobile anarchists and robbers were in hiding, was raided by the police on the night of May 14. Dogs were used in the attack, without great effectiveness, and the results attained with high explosives were disappointing. Two soldiers were killed by the outlaws' bullets and four policemen wounded, in spite of the use of "bullet-proof shields." Automobiles and trains brought sightseers to the scene, and after one of the bandits was brought out of the house, dying, he is said to have been trampled and kicked to death by the mob. Octave Garnier, the brains of the organization, and known to his friends as "the pretty eel," had prepared the villa for defense. He and his comrade fired 300 shots thru holes pierced in the walls. The besiegers fired about 2,000 shots. These anarchistic bandits had kept themselves in good physical condition thru regular exercise and practised vegetarianism and teetotalism. Before the end came Garnier and his comrade Vallet turned their revolvers against themselves. Garnier seems to have destroyed all their funds but a few bank notes before he shot himself. In a notebook he recorded the fact that he became an anarchist out of his hatred of work, "one of the forms of capitalistic exploitation." There were revolvers and automatic cartridges in quantities, besides ammunition, in the house at Nogent. The band, all of whose

members now seem to have been exterminated or jailed, has been especially active since April 1. The first notable automobile crime dates from November, 1911. The robbery of a bank messenger of \$1,000 cash and \$25,000 in securities was effected in December, 1911, in the capital. Some blame the glorification of crime in fiction and on the stage for the development of these clever, cruel and melodramatic brigands, who committed some of their exploits in silk hats and frock coats, wearing flowers, and riding in a limousine with a liveried chauffeur. Other persons credit their performances to the international society of anarchists. There are said to be 10,000 anarchists in Paris alone. — Two thousand steel workers have struck at St. Etienne, France, because of the dismissal of three comrades. — The Western Railway, owned and operated by the French Government, will, it is officially estimated, cost the nation a deficit of over \$16,000,000 in 1912 and nearly \$18,000,000 in 1913. — Two suffragets ran for office in the municipal elections of May 5, both as "Unified Socialists." Women are ineligible for election under the French law, and they received only 148 votes against 1,860, and 463 against 2,066.

In Morocco The French are sending to Morocco reinforcements of a mountain battery, Algerian tirailleurs, zouaves, chasseurs d'Afrique and a part of the Foreign Legion, besides warships. At the end of last year the French army of occupation was estimated at 54,000 men. It is agreed that General Lyautey, commander of the Tenth Army Corps, is the proper man to serve as first Resident-General. His experience in Eastern Morocco fits him for the task bequeathed by M. Regnault, who is retired as Minister to Morocco after having contended with the difficulties of European intervention, native anarchy and an unstable Foreign Office. French prestige has suffered eclipse in Northern Morocco during the last year, and the final touches were the massacre at Fez and the desertion of a squadron of Shereefian cavalry at Suk-el-Arba. The Resident-General, who has served as French High Commissioner on the Algero-Moroccan

frontier, was born at Nancy in 1854, and has seven or eight years to serve before reaching the age limit. He has won distinction as a cavalry officer and colonial administrator, is the author of several military treatises, and is regarded as likely to be elected, in the future, a member of the Academy. His task in Morocco is none the less difficult. Paris looks forward to a long military campaign, costly in men and money. The Sultan Mulai Hafid gives anxiety. Alternately he threatens to abdicate and expresses a wish to go to France. His condition is described as neurasthenic. The hillsmen of Morocco have proclaimed Hamid el-Arba Sultan, and offer defiance to France and Spain alike. There has been disorder in the suburbs of Marakesh, where the Caliph was assassinated early in May. The Spaniards defeated the Moors in an engagement near Hajada, in the hinterland of Melilla, on May 13.

Russian Affairs The Russian Foreign Minister, M. Sazonoff, has asked for the recall of M. Louis, French Ambassador. His complaint, thru the Russian Ambassador to France, that his projects concerning the Turko-Italian war and Eastern affairs were not understood in Paris was followed up by the further objection that M. Louis did not mix with St. Petersburg society. M. Poincaré, the French Premier and Foreign Minister, is likely to visit the Russian capital before the summer is over; in the meantime a successor will be found for the St. Petersburg post. French opinion is somewhat offended at the attitude of the ally. — Russia's navy has recently given her trouble: a mutiny having occurred aboard the battleship "Tsarevitch" on May 8, and twenty men from other ships having been taken in irons to St. Petersburg to be tried on the charge of revolutionary propaganda. They projected a requiem mass for the victims of the soldiers in the recent conflict at the Lena gold mine, and with plotting to murder the officers of the fleet and seize some of the ships—as in the Black Sea plot. Demonstrations at St. Petersburg occurred last month against the Lena affair, and the press has expressed its disapproval.

A California Historical Pageant

BY WILLARD HUNTINGTON WRIGHT

J. S. MCGROARTY

rama of California's history under Spanish rule.

This phase of American history embodies those principles of ritual, poetry, dramatic action and scenic romance which form the foundation of pageantry. It combines the Old World civilization with the savagery of the new. Its color contrasts in the gorgeous Spanish costumes, the brilliant uniforms of the King's soldiers, and the blazing garments of the Indians, make possible a rich and picturesque setting. The spiritual struggles of the Franciscan padres form a basis of conflict whose romance is as arresting as the encounters between the Indians and the Catalonian troops. Then there is the climactic crash of Spain's régime—a dénouement which lends itself to play construction. The period of the rise and fall of Spain's power in California forms an isolated segment of American history and contains a sequence of events strikingly in accord with the laws of dramatic technique.

Outside of its unusual theme matter, there are in the pageant masque at San Gabriel important characteristics which distinguish it from all other American spectacles. In the first place, it is performed indoors. This fact may seem to preclude the possibilities of its spectacular importance. On the contrary, it has made possible effects otherwise unobtainable. It is true that in being enclosed it

THE most recent step in the development of the pageant in America is that taken at San Gabriel, Cal., an historic town nine miles from Los Angeles. There, on the night of April 29, not a hundred feet from the mission of San Gabriel, founded in 1771, was performed for the first time John Steven McGroarty's "Mission Play," a dramatic pano-

has lost some of the festal spirit, but the development of the modern pageant leads inevitably away from the mere dumb procession of tableaux. Even if the present housed pageant loses some of its hereditary spirit, this loss is more than compensated by the gain of indoor lighting effects and scenic illusion.

The enormous theater at San Gabriel, designed in careful and minute harmony with the early missions' architecture, preserves also the atmosphere peculiar to the play's theme. The stage, nearly a hundred feet across, is sufficiently large to accommodate three hundred persons without crowding. In the "sets" are natural trees and full-sized tule huts like those inhabited by the early pioneers. With the aid of artistic "drops" and the latest appliances for lighting are obtained effects impossible in any open amphitheater. Also, the dialog is audible to every spectator.

The feature of the "Mission Play" which gives its chief significance is its close adherence to dramatic form. The presenting a chronological record of the principal historic phases of the rise and fall of the Spanish civilization in California, there runs thruout the pageant a story full of dramatic episodes. This story welds the historical portions of the play, gives the spectacle coherence, and interprets the personalities and the ideals which underlie the history it reveals.

There have been several attempts in American pageants to correlate these two dramatic forms. The effort was made in the Gloucester pageant, in which the episodes were chosen from Mr. Percy MacKaye's "The Canterbury Pilgrims." Two other plays of this nature might be mentioned—the St. Gaudens fête at Cornish in 1905, and the annual Redwood play of the Bohemian Club of San Francisco, founded on a masque written by one of the members. In these pageant plays there has been an attempt at the reconciliation of the fête and the dramatic idea; but in no instance has the combination been successfully achieved.

because of the disproportionate emphasis on the underlying principles of a community pageant and drama.

In the "Mission Play" at San Gabriel there is a closer alliance of these principles than in any other American presentation, altho dramatic sequence has been necessarily sacrificed at several points to the length of the period treated. From the first scene to the last—that is, from the first Franciscan settlement in California in 1769 to the American invasion, which marked the final disintegration of Spanish rule—sixty-five years elapse. Even so, a consecutive and unified story runs thruout the pageant, having its tragic climax in the last few seconds of the play. This story, tho at times imaginary, adheres closely to historical events, and its principal characters are historical personages. Even the fictitious characters are individualized, so that their appeal is personal as well as symbolic. Furthermore, the community idea predominates, thus preserving the most vital and important element of pageantry. No extraneous appeal or allusion has been introduced. The spirit of the ancient pageant has been crystallized in dramatic form.

The first scene reveals the shores of that portion of San Diego Bay where Point Loma Promontory shoulders out to sea. Here Don Gaspar de Portola estab-

lished the first Christian colony in California, bringing with him Father Junipero Serra, the founder of the California missions. In this act are depicted the early struggles of the expedition against starvation and sickness. At the parting of the curtains Don Gaspar has gone in search of Monterey, where he hopes to find relief; and the first dramatic event of the play is his return from the north with his stricken soldiers. He has failed in his quest. His men urge him to return to Mexico. There is little to eat and sickness is ravaging the colony. Hopeless, he determines to abandon California, and orders preparations to be made. But Father Junipero, already well along in years, cannot bring himself to give up the dream. He pleads with the men to wait a little longer for the relief vessel which Don Galvez has promised to send. The soldiers will not listen to his entreaties. Even the padres who have come with him advise the return. Night is closing down, and the preparations for departure at the turning of the tide are continued. Father Serra ascends Presidio Hill and begins to pray. The scene is an impressive one—the soldiers, busy with the task of packing, and the monotone of Father Serra's prayer falling resonantly upon the turmoil and commotion. Suddenly a shout goes up. Against the

A SAVAGE FESTAL DANCE

THE LAST OF THE EARLY FRANCISCAN PADRES HAS DIED OF STARVATION

A body of loyal Indians has brought him to be buried at the Old Mission. His arrival interrupts a love scene and determines the conclusion of Act III

shadowy horizon a ship is seen circling Point Loma. Don Galvez sails slowly into the harbor. The history of California is begun.

In the course of this act many dramatic episodes occur: The report of the discovery of the harbor of St. Francis and the naming of San Francisco Bay; the first encounter with the naked savages; the tragedy attending Don Gaspar's attempt to find Monterey; the impressive service of the first baptism of an Indian in California.

Fifteen years elapse between the first and second acts. The missions have all been built and El Camino Real established. Spanish civilization in California is at its zenith. The scene is the patio of the great mission of San Carlos, at Carmel, near Monterey, which in those days was the social and military headquarters

of California. The Indian converts now number thousands; they have been carefully trained in the trades, and a portion of the act is taken up with the exhibition of their craftsmanship before the padres of the different missions who have come to Father Serra to make the report of their achievements. Father Serra is now in the last year of his life, white and feeble, yet dominating the missions' history. The story moves swiftly forward, centering around the same characters as in the preceding act. But there are many additional historical characters introduced into the plot, chief among them Captain Rivera y Moncada, the commandante of the King's troops in California. A primitive yet typical love story between Anita, a half-breed girl, and Pablo, an Indian neophyte, is brought out when Rivera demands the custody of the girl. A dra-

THE FAREWELL OF FATHER JUNIPERO SERRA

This, the second act of the Mission Play, affords one of the most affecting scenes, combining the actuality of history with intimate dramatic characterization

matic scene follows, in which Father Sitter, the fighting padre of San Antonio, has an encounter with the commandante. In this act the natives give exhibitions of their early folk dances and songs, and the young Spanish people of Monterey perform the famous "Sombrero Dance" and the "Spanish Minuet" as it was in the early days. During the series of olios in which Spanish life in California is being reproduced, the pageant element predominates; but even here a love interest enters, and the personalities of the actors make the interest dramatic as well as historical.

The last act reveals the old mission of San Juan Capistrano, very much as it appears today—the old corridors in ruins, the patio deserted, an air of desolation about it. Secularization has dissipated the Spanish-Catholic rule; the missions are dilapidated and used as stables; the mission grounds have been bought by the Americano to be turned into stock lands. Forty years have passed since the second scene. Only one of the early characters has survived. But if Father Serra is dead, his spirit still moves thruout this act. It is he who fashions the culminating incident of the narrative. The last of the Franciscan monks, dead of hunger, is brought by a band of faithful Indians to be buried near the mission. They are about to be driven away by the new owners, when Señora Dona Josefa de la Cortina de Arguello (a well-known historical character) intercedes; and the tragic love

story which brings the play to a close is fashioned on reality. In this act the plight of the native, as well as the conditions of the new civilization, are brought out. The curtain is drawn on the death of the old régime and the birth of the new.

In the presentation of this pageant play over three hundred people participate. Forty of the characters have speaking parts, and each one is a definite, differentiated element in the unfolding of the story. In the production of the "Mission Play" the essence of pageantry is to be found. Every performer is a Californian, the great majority of them contributing their services without compensation. Eleanor Calhoun, the Princess Lazarovich - Hrebrelanovich, demonstrated her love for her native country and its history by crossing the ocean for the special purpose of playing the rôle of Señora Dona Josefa. The scenery and interior decorations were painted by the best local artists; and the large number of Indians participating are of the same tribes which are depicted in the play. Many of the costumes and the majority of the "properties" are loaned from the treasure vaults of the State. John Steven McGroarty, who wrote the play, is a California writer, the author of a history of California and the editor of a California magazine. The fact that the Mission pageant is to be an annual affair, running two or three months every winter, gives additional significance to the undertaking.

LOS ANGELES, CAL.

A Prayer

BY ROSE TRUMBULL

OH, make me strong like some great tree,
 Root-grappled thru the sod—
 My strength in that humility
 Which clasps the feet of God.

SCOTTSDALE, ARIZ.

Alaska's Needs

BY WALTER L. FISHER

[Secretary Fisher, of the Interior Department, recently made a careful inspection of Alaska, and later visited Panama, arriving at convictions concerning the needs of Alaska and a ready means of supplying them which deserve wide and careful attention. Secretary Fisher discussed the matter in an address before the American Mining Congress in Chicago, as well as in his annual report and other communications to Congress. The following article contains some of the conclusions presented.—EDITOR.]

IN my recent visit to Alaska I found a country of wonderful scenic beauty, which in itself will, in future years, be one of its greatest financial assets. I believe it to be a country of great mineral and agricultural possibilities—great probabilities—only needing development, ready for development, inviting development, but held back chiefly by inadequate transportation facilities and inadequate laws. Its present roads are almost entirely those which have been built out of the meager appropriations made by Congress for this purpose. Travel by road or trail in Alaska is still generally of the roughest pioneer description. Its present railroads are only incidents to the exploitation of its mineral resources.

The cry in Alaska and among those who are financially interested in Alaska is that development has been stopped by the withdrawal of the coal fields from entry; but I am convinced that the coal withdrawals have exerted only an incidental influence upon the development of railroads in Alaska. The critics of the withdrawals are usually either those who do not realize the prohibitory effect of the coal laws or those who have assumed that these laws could be violated with impunity. We should not repeat in Alaska or elsewhere the mistakes that have been made in the older portions of the United States; but this does not mean that Alaskan coal should not be developed and developed at once. It simply means that the coal should be developed properly, as well as promptly, and that with it all Alaska should benefit by the development.

I wish at the outset to express the high opinion I formed of the remarkably large and fine body of people who have become permanent residents of Alaska. There is unquestionably a con-

siderable floating population of a character that does not add to the real strength or stability of the Territory, but there is a substantial percentage of vigorous, law-abiding, self-respecting men and women of the highest type of American citizenship, possessing what is perhaps the highest form of moral courage. The entire population is about 65,000 persons, of whom a little less than one-half are whites. They are entitled to a Territorial government better adapted to their peculiar local conditions and needs than they now enjoy.

What Alaska needs more than all else is a trunk line railroad from the ocean to the great interior valleys of the Yukon and the Tanana, opening up the country so that its future development may really be possible. The vast interior valleys are covered with luxuriant grasses and can be made to raise cattle and sheep and even grain if proper seed and proper methods are developed by scientific agriculture. But agricultural development cannot go forward where the local markets are small and scattered and exportation impossible.

A railroad to develop the great Matanuska coal fields, perhaps the largest and best in Alaska, and to open up the great interior valley has been started from Seward, by far the best harbor and the best town site in Alaska which I saw or of which I was able to obtain any knowledge. The town of Seward lies at the head of Resurrection Bay, a magnificent and extensive harbor, landlocked and free from ice, and already selected by the Government as a naval coaling station. But this railroad, called the Alaska Central, or Alaska Northern, was only constructed for seventy-one miles, to a point on Turnagain Arm, where it stopped for lack of funds and various other reasons.

To open the great coal fields of Matanuska it must reach about two hundred miles northward from Seward, and to penetrate the valleys of the Tanana and the Yukon it should cover, in all, something like five hundred miles.

I believe that this road should be continued not only to the coal fields, but into the interior, and that if private interests abandon the task it should be performed by the Government.

There are no large financial interests back of this road; no large investments have been made which it will be necessary for private funds to protect. The adoption of an effective conservation policy takes away from the promoters of such a road the lure of great gain from the exploitation of the coal fields. This exploitation clearly should be prevented, in the public interest, but at the same time the Government must recognize that if it withdraws from private capital the incentive for railroad construction, the Government itself must assume the obligation of making possible that kind of development upon which it insists for the general good. It is obvious that the uncertainty of immediate return will prevent the adoption of any proposed plan for the completion of this road, but the imperative need of immediate transportation development calls for the construction of at least one trunk line, from tidewater to the Yukon, which, in my present judgment, can better be constructed from Resurrection Bay, thru the Matanuska coal fields, than anywhere else; serving the double purpose of opening up the great central portion of Alaska and of supplying our naval coaling station.

The conflicting views of public policy as to the Government ownership of railroads can easily be reconciled in this instance, and in undertaking railroad construction there is ample precedent at Panama, and it must be borne in mind that as a principle the Government is not here invading the legitimate domain of private enterprise. Indeed, the most important features of our railroad law are squarely based and depend upon the theory of the relation of railroads to the functions of government. What has really happened with respect to the railroads of the country is simply that the

Government has delegated one of its own functions to private agencies for what, at the time, appear to be controlling considerations of wise expediency. If, for reasons of equal expediency, the Government decides at any given time and place to resume its true function, it cannot be said to be in any sense invading the field of private enterprise. Obviously the financial benefit accruing in return for the expense of a railroad opening great coal fields is to the owners of the coal, not the railroad, and when by wise law we decree that no railroad shall be directly or indirectly interested in the commodity which it transports we lessen the incentive of capital to construct the road, and to this extent deprive the entire community of the developing benefits of transportation. So that, to my mind, it becomes not only permissible, but obligatory upon the Government, in the interest of the common good, to afford the necessary facilities of transportation.

The conditions in Alaska call for immediate action; first, in the construction by the Federal Government of a central trunk line railroad from tidewater, thru the Matanuska coal fields to the Tanana and the Yukon. The official representatives of the owners of the seventy miles of road from Seward north, to which I have referred, have signified their willingness to turn it over to the Government at a fair valuation, to be appropriately determined. The development of Alaska cannot continue without adequate provision for the primary means of transportation. Something must be done.

I earnestly hope that there will be no delay in legislation definitely authorizing the construction by the Government of such a trunk line railroad in Alaska as I have described. Our experience in Panama furnishes the very best precedent for such action. The United States has never carried on any governmental enterprise of which it has greater reason to be proud, or with which it should be better satisfied in every way, than the construction of the Panama Canal, and, incidentally, the operation of the railroad across the Isthmus. This railroad has been extended and used not merely in the work of excavation and construction, but it has carried a very considerable

volume of freight as a common carrier. It has been operated under the Isthmian Canal Commission, under a very simple, brief and effective act of Congress. What is needed in Alaska is the prompt enactment of a statute as simple, brief and effective. But the work in Panama offers still further suggestion.

The canal is nearing completion. We have there an engineering and executive organization which must soon be disbanded unless we seize this opportunity to transfer as much of it as may be needed to Alaska. It is an opportunity which should not be lost. There is, at Panama, a very considerable amount of machinery and tools suitable for railroad construction, and also railway material and equipment which the Isthmian Canal Commission has been using in its work, but the need of which will rapidly diminish during the coming months, and all of which must ultimately be sold, much of it at prices far below its real value for utilization in Alaska. The commission has had to operate and construct much more railroad mileage than will be permanently needed at Panama. The surplus machinery can be transferred from Panama to Alaska by water at comparatively small cost. It will be released at Panama as rapidly as it can be utilized in Alaska if the necessary legislation should be immediately passed by Congress. A very considerable amount of the material listed would probably be suitable for use in Alaska and would obviously have a far greater practical value for such use than can possibly be obtained for it by sale on the Isthmus.

There is 350 miles of 70 pound rails which has been in construction service for three to four years and cost \$31 per ton. Fifty miles of it will be available the last of the year and a hundred miles on the 1st of July following, and the rest later. It has all the necessary

anglebars, bolts, tie plates, etc., and a thousand switches, complete. There can also be furnished by the commission sufficient small hand tools to outfit all the excavating equipment and locomotives that may be transferred, and for track work for approximately a thousand men for six months. There are twenty-four locomotives (American Locomotive Company), which will not be required after the construction work on the canal is completed. They cost about \$11,000 each and will be retired in 1913. There are also thirty-two narrow gauge locomotives, which would be available for certain features of the Alaskan railroad work which will be retired by the end of the present year, with other narrow gauge equipment which would be serviceable in connection with spur tracks and extensions in the coal fields and elsewhere. There are 500 steel flat cars, which cost \$881 each, and 1,600 wooden flat cars, which cost \$1,110 each, which can be converted into box cars, bunking and mess cars, etc. There are 1,800 steel dump cars, which can easily be used in transporting coal, besides excavating machinery, wrecking outfits, steam drills, pile driver outfits and other material probably sufficient to construct and equip the Alaskan railway.

The important point for the development of Alaska is the necessity of the railroad from tidewater to the valley of the Yukon, connecting the great interior waterway system with the coast and thus with the world. The fortunate incident is that we have at our disposal almost without cost so large a part of all that will be necessary for the equipment and construction of such a road.

It is something which ought to be done, and done quickly, and we should avail ourselves of these favorable conditions to do it.

WASHINGTON, D. C.

In the Woods at Eighty

BY E. P. POWELL

AUTHOR OF "OUR HEREDITY FROM GOD," "LIBERTY AND LIFE," "THE COUNTRY HOME," ETC.

HERE I am sitting on my veranda in sunny Florida, quite the other side of fifty, and I want to know what my rights are. What is it that really belongs to old age in these days? Mr. Osler made a huge blunder when he thought we were to be Oslerized at forty; the question is, when are we entitled to social retirement, becoming intimates of the blessed ones and the wise ones, and authoritative translators to the young folk behind us? Just when it will be safest to demit reasoning I dare not say, but one thing is sure, that we are not going to quit the work world at forty, nor even at fifty. Mr. Gladstone showed no symptoms of closing up his active career and his mighty leadership until he was over eighty.

Perhaps that is about the point when we modern folk should make a bow to politics and the pulpit. But when we do go into the woods (that is, the pews), we are confronted by another sort of environment. The gods are no more dead than they were in the days of the Hebrews (these dear old mothers and fathers of ours), but they are non-communicable. Are they? Is spiritism demonstrable? That is the non-downable problem of these present times. No one has lived to be eighty years of age without running across experiences that would make spiritism more plausible than science. But we do not go to the woods, that is, back to the land, to consult shrines. We go in order to consult what nowadays we are calling Nature. We do not build temples, but we plant orchards and gardens.

Some folk think that we are veritable heathen for this worship of facts and things, but we have Jesus as our leader. When they pointed him to the temple he answered with disdain, that those stones would soon be thrown down, so completely that not one would be piled on another. Look, rather, he said, at the lilies in the field or at the wheat that

grows, and let those that have ears to hear, hear, and those who have eyes, let them see. Let those that have hearts understand, now as then. If Jesus were alive today they would call his discourse science, and elect him president of Wisconsin or Cornell, while the churches were debating his orthodoxy.

Then you will notice another great change. The pre-forest life, the preliminary years, are greatly changed. They are no longer given over to warring, that is, of the old sort. Young folk are busy now with football and fourteen-foot ballots, and the problems that brunt them are how to down a new sort of tyrant; and they do down them every four years, for in reality our administrations have been a succession of stages in democratic progress. Really, the problem is the same as of old; it is the assertion of manhood, it is pride for the right, and a higher vision for every generation. This is the one demonstrable truth, that taking the world over and all time thru, we have been making great gains, both morally and intellectually. There was never such a grist of manly men from whom to select the next President as there is today. They are incomparably ahead of the group that took in Webster, Clay, Calhoun and Crawford. I would like to see one history written, strictly to show how, from the first historic data to the present day, manhood has been winning out. Decalogs and Golden Rules and Magna Chartas have been milestones on the road.

Jesus marked the anti-war era. This did not mean a cessation of war only, but that every man's occupation should thereafter be constructive and productive instead of destructive. He should make the fig trees bear and the lilies blossom about his door. Christianity weakened its original power when it forgot the lilies in the fields, and its simplicity began to be theology. The Sermon on the Mount was the most practical every-day

talk the world had heard at that date. It was the gospel of God on this earth, the gospel of certainty—the song of stuff. Well, well! Let us gather a bunch of roses, and now for a plate of strawberries. This forest life, after all, is very endurable, because it has in it Him who is life; and this we are gradually finding out.

When war was normal it was necessary to get rid of the fighters and sweep the quarrels off the stage by short generations, and this made short lives. Fifty was quite old enough for Alexander to have turned the world topsy-turvy. But war has become the most abnormal of conditions. One hundred years ago the problem was between Thomas Jefferson and Napoleon Bonaparte. Jefferson has the world today, and there is nothing left of Bonaparte but his University.

Jesus was the prince of horticulturists; he knew the soul of Nature. God planted a garden eastward in Eden; Jesus walked in it. I wish him to walk with me in my apple orchard, and among my orange trees. Why not? Is not that just what all this revolution and evolution means? Jesus went to the woods at thirty, but he did not stay there. He went back to his life work, with the spirit of the trees and the vines in his voice. His topics were the wheat in the field and the lilies in the garden. He is more alive today than he was two thousand years ago, and he is still talking of the beautiful world.

This shows the change that is going on as I see it; that we bring together the child life and the ripe life, as blossoms cover the oranges before they fall. The best education for young people is out of doors, in the woods. And this is what we are finding out, that there is, after all, no such great difference between youth and age. We go to the woods and lead our forest life, but we take the babes with us, and youth seeks the wisdom of riper years among the trees.

Stay, therefore, with the young folk as long as you can do a young man's work or help others to do it. Seventy is early enough to retire from responsibility; for a well-groomed worker, I am not sure but that eighty is nearer the mark. Edward Everett Hale at eighty-five led the van of American thinkers.

Old age as a helpless bundle of worn-out forces is a blunder. Nature orders nothing of the kind. We are made up for continued activity, and it is a reckless misuse of ourselves that leaves us to spend our later years in decrepitude.

Yet every one should have his garden ready to welcome him as soon as he comes down from the pulpit. Our school life and our home life and our training altogether should anticipate, not fragility and insipidity, but fine ripeness and vigor. It should be with us as it is in the orchard. October, swinging its boughs full of Northern Spys, is fully as normal, and it is more glorious than even May, with its blushing blossoms and its overflow of life. I mean that old age should be educated for quite as much as middle life is educated for; not to pension it, unless this very education be in itself a pension, as I think it is. I would prepare the garden, and for the garden retirement as a final climax of right manhood. The garden itself is a pulpit, and every thing in it is a Bible, inspired before the Epistles were written.

Agassiz said, "You would have me reverent in the church, where you open to me the word of God; I would have you reverent in the fields and by the seashore, where I show you the works of God." So it is this forest life is still a needful thing, for it is the ripening life, and it should be full of fruit instead of blossoms and greenness. I had already met Darwin, in the pulpit before I left it; and I had learned to interpret Jesus by evolution. I had learned to find our heredity not in the fallen man, but in the rising man. Our inheritance from the brute did not seem to be any more important than our heredity from God. I did not worry myself about the animal that I had got away from, so much as about the animal that I had still in me.

Now, in my garden life, for here I am in truth, and not ashamed to know it, I find that my topic is still life and progress, and animation and the beautiful, and that this earth is still the home and homeful. It is not a matter of letting go that concerns me, but a matter of drawing nearer to the vital principle. I do not see why one at eighty should

drool. The trouble is that anyone should begin to die, and that so many should keep at it all their lives. Do not most people fail to live at all, but begin to die as soon as they are born, or sooner? Living is something positive. It involves desire, purpose, will and a conscious process. One is not alive because he moves or breathes; he is alive only when his body is full of wholesomeness and his mind is full of health. So it is that here in my garden life I do not speak of death but of youth.

Yes, yes! He that hath ears! Dear me, how much of the glory of the world escapes us, from not having ears to hear and eyes to see. It is not a matter of dying; the trouble is we have never been born. My amazement is that I have come down thru these years, these eighty rich American years, full of science and full of hope, unconscious of the larger share of my birthright. My surroundings did not constitute a part of my environment, because I neither saw them nor heard them. I lost a large part of all the beautiful and the good and the true that rightfully came within my life range. In some way we must devise a method for opening children's eyes so that they can use them thru life, to their best, and teach the ears of the young to hear. It is the most blessed feature of the coming generation.

Send the children into the woods as soon as they can pick the wild strawberries and hunt the anemones. Classics if you will, but every tree is a classic when seen rightly, and many of them are Iliads. I am glad that I was greatly let loose in early childhood, when I stumbled onto my likings. Wild squirrel corn and Dutchman's pipe and violets and ferns, indeed, I owe as much to them, or more, than to those who taught me the alphabet, with no other object in view than that I should know it. I had read the Bible thru seven times, or was it eight, when one day, and I remember it well, I happened to hear Job in that magnificent song of the thunderstorm.

What, no Latin! No Greek! Yes, more, rather than less, for those old writers heard the winds talk and they saw the wit that was in things. But what do you make of this prelude of

piled up dictionaries, that uses up fifteen years, but never introduces you to a single one of the old masters? It is Homer that you want, as Dante wanted Virgil; it is to be brought into the presence of the great hearers and seers and thinkers. It is so also that I think one needs to study Christ and not Christianity, Jesus and not the creed. They give us too much interpretation, but they leave out the Man.

I like it, too, that now, while I can sit down under the shade of my eighty-year-old tree. There is still so much to be done, and there are so many that are willing to do it. Let them at it. From General Jackson to President Taft is a story of uninterrupted progress. The Temperance Reformation began about 1830 and it swept the sideboard out of American houses; the battle for human freedom made heroes as well as victims up to 1860. This was the cradle that rocked the Lincolns. Industrial education could not wait for the close of the war; the Open Door for world's commerce made McKinley immortal. General Booth declared the abolition of poverty right in the heart of our millionaire making. Then came the Parliament of Religions, and the internationalizing of the world. Indeed, it was a magnificent heritage; and in the woods one may clap his thighs with joy, for really man is more manly than ever and the brave ones are braver. No party dares today to publish a platform that is not surcharged with moral purpose.

I must look over my notebook again to see which party I belong to; for indeed are they not all advocating every reform that can be conceived? And they will work them out, in spite of some feebleness and some lying. Postal banks! Parcels post service! Penny post! So we go; and we in the woods can read the news every morning. Indeed, we are likely to be waked up in the middle of the night by the telephone. I look back as a millionaire. I own eighty full round years, and they are mine forever. No one can take them from me. It was with Old Hickory that I learned my alphabet; it was a whole generation later when I went to school with the Rail Splitter. It is another type of man that dominates in Roosevelt, tempered by all the rest of the candidates for 1912.

It is something to have lived thru twenty administrations, and know that the American type has been true to itself. No one has any right to clip off his life with half a dozen administrations, or twice that. It is this Yankee way of living, from one government to another; this broadening of our vision, this changing of our outlook, that keeps us young. Think of being covered all over by the single reign of Victoria, or at most spanning two or three of the Georges. There is no reason at all why we shall not come to round out our years with Moses, at a hundred and twenty. We must learn to despise half living and quarter living. There must be less whining, and we must learn to comprehend the laws of simple eating and drinking, and full sleeping, and cheerful companionship. Above all, one must not pass his years or his days without knowing just what to do with himself. What a fool's work it is to have all the machinery that makes up a man, and keep it on hand for half a century, having done nothing with it. Have enough on hand to do, and joy in achievement.

Give up greed, which is egregious folly; learn that there is a Providence in the world, and that you have a share in it. Spend no time in learning what is of no use. By all means create the home instinct, and whatever else you fail to do make a garden, plant trees, grow roses, eat apples, and get up early in the morning. Ten acres is a continent to a right soul; a whole continent is nothing to a mean soul. Ten acres will hold no end of sunsets and of good mornings and the noon at midnight. Get ten acres before you die. Eat a plate of your own peaches, and originate a new kind of grape. If God really created all things, they should belong to his children; if He did not create them, you might yourself begin the work of world improvement.

A girl that has been trotted about the earth, and has no home instinct, has a dissipated mind. Going to college does not make a boy over into a man; it may undo what little building has been done. We ought in our schools to have but one object, to make good home builders. Music is good for nothing but to soften and sweeten home life, or for nothing better. Science makes sanitary houses, lays out

beautiful grounds, teaches wholesome social life, helps to destroy insect foes; and the end of art is nothing higher than a beautiful life surrounded with beautiful environments. My little mother could not play even on a jewsharp, but her oven sent out an octave of delightful odors. It is in this way we are lengthening life and making life meaningful.

And we in the woods, we must cheer up the workers. On the sly I tell you these woods of mine contain a grove of oranges, and there are yard-ins of roses, and this is exactly what I intended—for this forest life is in my opinion the best part of life. I advise you by all means to look forward to it, not with weak dread, but with confidence. There are, however, a few things that I look back and hanker for. I would like to see the old-fashioned kitchen once more, or some sort of a whole family room, for a whole family life. Folk have got too much scattered. It is not the old folk so much that pull out at the one end as it is that the young folk pull out too readily at the other. Each one has his own room, and that is all right; but I would like to see a part of each day given over to family life. The business man has no right to live in a store and a clubhouse; and a mother, God bless her, what is she good for if she cannot keep the children about her?

Am I after all a croaker? Give me the huge fireplace heaped with logs, and enough grandfathers and grandmothers to fill the room. Drying beef and strings of apples, and bags of cottage cheese hang from the ceiling. The pantry door is open, and milk pans full of old-fashioned milk cover the shelves. I would give a dozen Morris chairs for the old home-made settee and the squeaking rocker. The mother's busy hands are stirring pies of pumpkin on a home-made table, under a home-made cupboard, filled full of home-made maple sugar and honey and butter, while loaves of bread are rising around the fire.

Yes, yes, one must be allowed just a single backward look, and if one be turned into a pillar of salt for it, why, there are worse things than salt; of that I am sure. Old age has no right, however, to be calling up the past by contrast; a grander life is ahead, and a

sweeter, and there is no time for remorse and to sweep up the dust of wasted years. You cannot smooth out the wrinkles of a petty life with all the moral flatirons in the world. The only way is to be happy in the days that are,

and make better ones. Get up in the morning as the sun gets up; shine down selfishness, shine up goodwill, as the grape vines clamber over the porch and fill your forest world with life and growth and fragrance.

SORRENTO, FLA.

Samples of Modern Evangelism

BY WASHINGTON GLADDEN, D.D., LL.D.

[It is well that one so sane and sound in his thinking, and so sympathetic with the work of Evangelism, should warn the churches against the excesses and travesties of revivalism that sometimes are allowed to rave on church platforms and astonish believers and disgust unbelievers. Dr. Gladden is a distinguished leader in the Congregational Church and was not long ago Moderator of its National Council. He has now been pastor for thirty years of the First Congregational Church of Columbus, Ohio, and was previously one of the editors of THE INDEPENDENT.—EDITOR.]

I DESIRE to present to the readers of THE INDEPENDENT for their consideration and judgment certain phases of what is called "evangelism" which are now appearing in different parts of the country, and concerning which there seem to be differences of opinion. Not wishing to incur the censure of either party to this controversy, I shall endeavor to avoid committing myself in approval or in condemnation of these evangelistic methods. Neither shall I mention names or places; let us keep the question wholly free from all personal and local considerations. I am going to submit to my readers for their approval portions of sermons which have been recently preached to large audiences of American Protestants. They are the utterances of more than one preacher; I have not singled out any individual; there are quite a number of evangelists with whom such methods of expression are more or less common. Those from whom I quote are ministers in good and regular standing in one or another of the leading evangelical denominations. The words which I shall quote have been spoken on platforms on which were seated most of the evangelical Protestant ministers of the cities where they were uttered, and they have not, so far as I know, called forth any public protest or disapproval. I have the

best reason for believing that these utterances are accurately reported. Inasmuch, however, as I am mentioning no names, I am doing nobody any injustice. If any words are quoted here that nobody has spoken let it be noted that nobody is charged or credited with speaking them.

I should not venture to report these words if they had not received the approval of a great many good men; surely it cannot be improper to spread before the Christian public, for its information and inspiration, some of the most characteristic portions of an evangel which is being enthusiastically received in a good many of our best American cities.

With this brief explanation I submit the extracts referred to, with only such comments as may throw a little light on the circumstances under which they were spoken.

"A young man or woman who fights against the Christian life cannot measure character with a grizzly ape or a yellow dog."

"It takes a little weazen-headed, jug-headed man to doubt God—I've sure got down to the size of some of the muts of your town this morning."

"Let me say that when you little vile hounds attack me you are a liar and a

coward, for it is at the cause of Jesus Christ and all the churches united in these meetings you are striking over my shoulders. You little bum, I'm calling your bluff."

"Every slap at me is a direct slur at the Christ of these meetings."

[From a prayer, referring to certain editors who had criticised the preacher]: "They're a bad lot, Lord Jesus, a bad lot. Let me give you a tip, Lord Jesus. If you go after those fellows you'd better put on your rubber gloves."

A few young high school girls in front of the platform were giggling. The preacher calls to some boys of about the same age sitting near: "Here, you young bulls—some of you come and take these heifers out on the grass."

"I want to say to you that there is a dirty spot in every preacher and every layman who fights the great evangelistic movements."

"A preacher who says that the right or wrong of card playing is just a matter of conscience should be kicked out of the ministry. He couldn't slop hogs for me."

"The statement has been made here in ——— by some dirty little puppet of the pulpit that there is no harm in the dance, the theater, or cards. To hell with that kind of a minister. I am not swearing, brethren, I am praying. A preacher of that sort is worse than a bull-necked bartender."

[From a sympathetic report in a local paper the following extract is made. The scene described was near the close of the meeting, when the audience, instead of coming forward at the evangelist's call to the penitents' benches, was retiring]: "The preacher was quick to see the turn of events and made no attempt to conceal his disappointment, which, with the moments, grew to anger. He saw full well that in point of conversions the meeting was a failure, and that he had in reality wasted one of his strongest efforts, and, climbing to the raised plat-

form from where he had delivered his address, he thundered forth the sensation of the campaign. . . . Holding his hand aloft to get attention, he said: 'I have spoken for more than two hours. If you rot and go to hell, stumbling over the message of Almighty God, it is not my fault. I have no apology for any utterances I have made. If you people who have not cleaned up have no inclination to do so now, you can sink as far in hell as the devil can put you. This meeting is closed.'"

A clergyman sends me this report: "I heard him [the evangelist] say that 'if any minister believes and teaches evolution he is a stinking skunk, a fraud, a hypocrite and a liar.' The night he said this I privately remonstrated with him. A short time after this, in another service, he again attacked believers in the evolutionary theory, and turning to where I sat he clenched his fist and, shaking it in my direction, he exclaimed with fearful venom: 'Stand up, you bastard evolutionist; stand up with the infidels and atheists, the whoremongers and adulterers, and go to hell.' The last words were shrieked with every possible violence of gesture. I did not stand up. . . . Some of his other expressions were as follows: 'Spewing your dirty vomit.' 'Stand on your hind legs, you stinking polecat!' 'If a woman on the avenue plays a game of cards in her home she is worse than any blackleg gambler in the slums.'"

Another entirely sympathetic reporter gives in this picture. There had been a large attendance of men representing certain secret orders, and there was but little response to the evangelist's appeal. "The preacher asked that all heads be bowed in prayer, and he launched into an entreaty to the Divine Giver of all things the like of which was never heard by a local audience. He was feeling keenly the indifference on the part of the congregation he most desired to reach, and in his prayer asked God to visit death, if necessary, on the heads of those who were standing in the way of the progress of the meeting. He said that he was sure that the reason more spirit was not manifest was that men in league with the devil were doing their utmost to bring

defeat upon the meetings, and in a burst of impassioned oratory, more in the nature of a command than a supplication, asked that crape be made to adorn the doors of all in the city who were not fighting on the right side in the battle for souls."

It was the same day or the next day that the authorized stenographic report in the daily paper represented the same evangelist as saying: "If this hardness of heart continues until the end of this meeting, I say to you that God's wrath will fall upon this community. There will be more funerals following this revival than

you have had in your town for ten years. Mark that prophecy."

I have many similar samples of this modern evangelism, but these will suffice to indicate the type. It must not be supposed that these things have been said in a corner: they have been listened to by audiences numbering many thousands; the evangelists who utter them carry with them, from city to city, the unqualified commendation of large numbers of Protestant ministers.

It is a phase of modern religious life which deserves the careful consideration of intelligent Christians.

COLUMBUS, OHIO.

The Dream

BY CHARLES F. LUMMIS

DEAR God are you certain?
Can it—is all of it meant for *me*?
Did you not pass the right one by?
What can those bottomless eyes of her see
Back of this dull gray curtain?
Grizzled, ingrown and grim am I;
She is fair as the world began—
Radiant, tender and wonder-souled;
She, that would queen the proudest throne,
She, that should better its gems and gold,
Bending rosy to me alone,
Whispering: "*My old Man!*"

Hers! can she fathom so deep
Down to the heart of my heart,
Where the very I, apart,
My ultimate altar keep?
Hard is the shell, and thick—
Of a thousand scars it grew—
But at its core and forevermore
The quenchless flame is quick
And faith stands tall and true.

Let her come in!
Here all is free for her,
All is to see for her—
No corner hid.
Here she shall find the Me;
The boy that I used to be,
Boy I will be for her—
And man as she would bid.

I cannot go astray,
With that slim hand in mine;
There is no heavenlier way
Than where her true eyes shine
There is no melody like her,
No star so high, no dawn so pure,
No joy so dear nor hope so sure.

Thou that hast loaned me such a spur,
Watch me, God, if I earn it not!
Help me unsaddle the heavy years,
Turn young-eyed to the trail again!
All that hardened shall be forgot,
All the treacheries, all the tears.
Now, in step! And the past, goodbye!
Up and away on the open plain
Flower of my heart and I!

.. . . .

"Poor my old man! 'Twas a girl's mistake!
I was sorry for you, you see;
God forgive me, I did not mean—
You were so tender a knight to me
Truly, I thought we could make—
But now I know it was not to be:
Love must be more than pity may.
He came, whom I did not guess, between;
But came—and he goes my way!"

LOS ANGELES, CAL.

Jack in the "Doghole"

BY JAMES H. WILLIAMS

[Once more our sailor correspondent presents the demands of the most neglected and often abused of all our industrial workers. He knows from experience and careful thought what he is talking about.—EDITOR.]

FROM time immemorial it has been the almost invariable custom in merchant ships of all nations to locate the "forecastle," or "sailors' house," in the "eyes," or extreme forward part of every ship.

Originally, perhaps this was done as a matter of necessity, for in olden times small ships were obliged to carry large crews in order to manipulate the primitive nautical appliances then in vogue, as well as to fight ship in case of attack by pirates, etc.

It was therefore necessary to house the crews where the most available room could be found for them, which was, obviously, between decks; precisely as men-of-war crews are berthed in the gun decks today.

Out of this ancient practice grew a most pernicious and dangerous custom, which still prevails in all merchant marines, and is rendered doubly dangerous and even more inhuman since the introduction of great ocean steamers.

Mr. Dana, in his famous story, "Two Years Before the Mast," which has come down to us as a sort of marine classic, relates that in the full rigged brig "Pilgrim," on which he made his memorable voyage 'round the Horn and back, he found the "forecastle" in the fore peak, or "steerage," as he terms it. That is right in the stem, or extreme forward part of the vessel and below decks, where the narrowing of the bows naturally narrowed the breathing space, while the want of light, heat, ventilation and drainage and the nauseating effluvium from the agitated bilge water all tended to render the sailors' quarters insufferably hideous and loathsome and unwholesome to a degree.

That was probably some time prior to 1830.

On February 28, 1876, I sailed from Boston on my first sea voyage in the full rigged brig "Nicanor" (one of the last of her race; there is not a single ship of her

class under the American flag today), and I found everything on board, including the forecastle, exactly as Mr. Dana had described it. In fact, in all essential details the two vessels might have been sister ships, altho the voyages were made nearly fifty years apart.

This shows how slowly reforms come about. As a rule they are the result of some great catastrophe—an earthquake, a mighty conflagration, a pestilence or a revolution, or perchance a great shipwreck in which the king and royal family are drowned.

In 1890 the organized seamen of the United States petitioned Congress for certain reforms in the existing maritime laws relating to American ships and seamen and for better rules and regulations for the protection of life, limb and health on shipboard.

Two of the most important features of the bills, which were seven in number, were these:

A scale of provisions in kind, quantity and quality as good as our convicts received in the State and Federal penitentiaries.

A forecastle space as large as that allotted a steerage passenger on a liner—i. e., 120 cubic feet.

In regard to the first: The seamen set forth in their memorial to Congress that thousands of seamen were rotting and dying in all parts of the world annually from the ravages of scurvy and other scorbutic diseases, which were easily preventable; that their constitutions were so weakened by malnutrition that they were peculiarly liable to the epidemic diseases infecting tropical ports; that the then existing food scale had been in vogue for at least 150 years and was in general use in the British navy in Lord Nelson's time, and had been copied verbatim from the British statutes long before the Revolutionary War and preserved intact to disgrace our own maritime code.

Furthermore, the seamen submitted

food schedules obtained from various prisons thruout the country as showing the comparatively sumptuous and eminently wholesome fare served out to public malefactors.

Verily, "no man would go to sea who had brains enough to get into jail."

In regard to the next item:

Prior to the general enactment of 1898 there was no statutory provision as to the size, location or appointments of the sailors' quarters.

The only mention made of the subject in the old admiralty law was a passing phrase: "There shall be on all ships of commerce a fore-castle, or sailors' house." All else was left to be regulated at the discretion of individual owners.

In the larger class of ships the fore-castle was in a separate house built on deck; while a very few shipowners, moved no doubt by considerations of humanity, had their forecastles built amid-ships. Otherwise the old conditions remained unchanged.

Memorializing Congress on this subject, the seamen respectfully represented:

That under existing conditions they were being herded like cattle in pens; fed like swine in sties and treated like dogs in general. That they had no heat in winter, were smothered in the tropics and "washed out" in bad weather at sea.

That their quarters were usually swarming with noisome vermin, and that owing to the lack of light, space and ventilation, thousands of seamen died annually from tubercular affections.

In all of these representations we were warmly and heartily supported and endorsed by the entire staff of the United States Marine Hospital Service. Yet Congress hesitated for years in deference to the united antagonism of the shipowners and the specious pleadings of their paid attorneys and lobbyists.

In 1897, on the recommendation of the Commissioner of Navigation, the tonnage tax on ships of commerce was changed from gross to net tonnage only. Thereafter no tax was levied except on space actually used for cargo.

All living quarters and spaces certified for the carrying of ships' stores, provisions, anchor gear, etc., were therefore exempt from taxation. Thereupon Congress enacted: That each seaman should

be allowed 72 cubic feet of breathing space, or "*not less than 12 superficial feet measured on the deck or floor section thereof.*"

That is a space 6 feet long, 6 feet high and 2 feet wide, in which a seaman must live, keep his clothing, eat, sleep, move and have his being.

A space which, it must be admitted, was rather large for a coffin, but too small for a grave!

The same year Congress was impelled by the appalling reports of the United States Marine Hospital staff as to the great number of advanced cases of consumption and tuberculosis existing among seamen, to establish a Government sanitarium on the reservation at Fort Stanton, New Mexico, for the benefit of consumptive seamen. A very wise and worthy act, no doubt, but how much wiser and worthier it would have been to enact a statute *compelling all ship-owners to provide commodious and more sanitary living quarters for their crews!*

There have been some further improvements since then, and, altho our quarters are still far from luxurious, they are much better than they used to be, and our food is, in most respects, all that any reasonable man could demand.

The arrival of the scurvy ship "T. F. Oakes," in March, 1897, with one-third of her crew dead and the remainder rotten with scurvy, convinced the world that the seamen had been telling the truth. Then Congress set to work at once to remedy the evil. All the pleadings of "vested interests" were swept brusquely aside, and the long suffering sailor was granted some measure of consideration.

In British ships, however, there has never been any real reform in regard to the sailors' fore-castle. It remains where it always has been—both in sail and steam vessels—right in the fore peak among the windlass gear. A diagram of the "Titanic" shows that, with all her modern improvements and gorgeous appointments, her fore-castle was in the usual place in ocean liners—right forward and beneath several decks.

Now the danger of this system of construction must be obvious to any one who studies the subject at all. In the first place, in case of a head-on collision the watch below has not one chance in one

hundred to escape sudden death, either by drowning like rats in a hole or being crushed by the wreck of impact.

But it is not altogether for the sake of the doomed seamen that I speak. In case of emergency on shipboard, the seamen are the ones most to be depended upon for the saving of life.

Imagine now, if you can, fifty seamen down in a deep pit with only one means of egress, all fighting desperately for possession of the narrow gangways up which they must ascend to reach the upper deck, with water pouring into their narrow quarters with the force and volume of a small Niagara.

Now suppose they all succeed in escaping from their gravelike pit and reach the deck. Their first impulse would be to reach the boats.

In order to do this they would be obliged to fight their way thru a struggling mass of frantic, panicstricken steerage passengers, assembled in hysterical confusion on the main deck, before they could reach the bridge ladders and ascend to their stations on the main deck.

Under many circumstances it is quite

conceivable that such a feat would be impossible. Whether these conditions prevailed on board the "Titanic" I am unable to say. In that particular instance the collision with the iceberg was not head on; it was a glancing blow forward of the beam which caused her destruction. Therefore the forward collision bulkhead, which protects the sailors' quarters, may not have been ruptured, thereby allowing them a chance to escape. In any case, this awful calamity should be a warning.

In all cases the crews of passenger boats should be quartered abaft of amidships, where they will be out of danger and have at all times immediate and unobstructed access to all boats and life-saving gear.

I can mention first-class American passenger ships of recent date that have been so designed and built. The plan proves successful both from humanitarian and utilitarian standpoints, while for the general safety of all concerned it is a most important and necessary provision. Make them all do it!

NEW YORK CITY.

The Moon Harp

BY SUI SIN FAR

[Our readers are already familiar with some of Sui Sin Far's contributions to our columns. They will be interested to know that she now has a volume, "Mrs. Spring Fragrance," in press.—EDITOR.]

THERE was a fascination about that Moon Harp—a fascination far transcending that which invests any ordinary musical instrument. He who held it, a Chinese Harvard student, sat back of the stage, while the conjurer, another Chinese student, delightfully mystified the audience with his clever tricks. But, for me, there was more magic and enchantment in that ancient Moon Harp than in any wizardry.

As the musician, a slender, delicately formed youth, with a velvety, ivory skin, long Oriental eyes, willow eyebrows and long, tapering Chinese fingers, bent over it, apparently dreamily musing, I conjured in my mind the visions his strains would evoke. In the glowing imagery

of music I heard depicted some fair scene of nature, some moonrise, some sad, sweet parting of lovers; some triumphant meeting of found souls; a maiden making her own vows to the stars and a yellow-eyed owl, the Phantom of Love; the Dove of Peace. I breathed the fragrance of myrrh; I saw sorrows vanish and virtues proved. My imagination was imprest; my heart melted.

The conjurer gathered together his magic balls, cards and handkerchiefs, and departed amid much applause.

The man with the Moon Harp stepped forward, raised his instrument upon his bosom, passed his fingers over its strings, and played "YANKEE DOODLE."

BOSTON, MASS.

False Weights and Measures

BY J. OLIN HOWE

ONE of the sturdiest blows yet struck at the high cost of living is the statute which has been enacted by several States requiring that on all packages of foodstuffs must be marked in plain figures the accurate weight, measure or numerical count of the contents. During the last five or six years—since the enactment by Congress and most of the State legislatures of the Federal pure food and drugs act—there has been a steady shrinking of the quantities in package foodstuffs, but the prices have been maintained—until it was possible to buy in fancy packages at the rate of 70 cents a pound crackers sold in bulk at 15 cents a pound!

We have been taught not to buy in bulk; successful campaigns have been waged against the cat-in-the-crackers grocery and mothers' associations and others not composed wholly of women have worked busily to rid us of unsanitary methods of selling articles destined for the table; so that the purchaser has given himself into the hands of the man who packed the goods he insisted on having in packages and unhandled between manufacturer and consumer. Nor has he realized that the contents were growing less. There seldom was so much contrast between this package and the last he bought as to attract attention; this one was similarly labeled and looked about the same; and this is a heedless, and thus extravagant, nation.

Along comes this new law to protect the thoughtless householder—and his wife, who orders by telephone what her folks eat. In one form and another Nevada, North Dakota, South Dakota, Nebraska, Wyoming, Florida and Connecticut have passed it, usually as an amendment to their pure food laws, and it will be the subject of discussion in most of the States whose legislatures meet in 1912. The list of these includes Georgia, Louisiana, Massachusetts, New Jersey, Rhode Island, Vermont, Kentucky, Maryland, Mississippi, South Carolina, Virginia and New York.

For four or five sessions past there have been introduced into the New York Legislature net weight bills of the general tenor of those passed in other States, but none has gone through. Pennsylvania's lower house passed a rather drastic measure of this kind last year, but it failed of passage in the Senate. The Mann bill before the last Congress aimed to make mandatory, instead of optional, the net weight provisions of the Federal pure food law, and tho the somewhat exhaustive hearings on it before the Interstate and Foreign Commerce Committee were followed by no action, it has been succeeded in this Congress by the Stevens bill, of similar import.

The States in the first list have got well ahead of the National Government, however, and at last one city, Seattle, has established an ordinance of this nature for the protection of its people. The sale of any package, box or similar receptacle not bearing a statement of the true net weight of the contents has been prohibited in Seattle and the ordinance went into immediate enforcement.

This is possibly paternalistic, all of it, but it offsets the tendency of modern business to get all it can. Nor will it cure the evil. It will check it and business competition can be looked to to help out a lot. With the exact net quantity of the contents marked on a package the purchaser can readily determine how much he is really paying per pound or other quantity and it is no trick at all to get a good general idea of about how much he ought to pay. In brief, quantity—which has been lost sight of in the effort for quality and purity—will again come into its own as a determinative factor in the sale of eatables and the buyer will benefit.

Perhaps this gradual shrinkage in the contents of sealed packages dates from the time, somewhere about the time of the passage of the Federal pure food law, when a manufacturer of package goods for table use, one whose words

are listened to in the trade, remarked how little need there was to care for the restrictions of that law because of the ease with which the contents of the bottle, box or can could be reduced gradually, imperceptibly to the customer, until his package was much smaller—or, if the same size or weight, contained glass, pasteboard or air space where had been things to eat.

At all events, he said it—and the developments of the last five or six years along this line have been startling. Wooden nutmegs and sawdust hams are primitive in comparison. Packages of cereals which once weighed 21 ounces now weigh as little as 11 ounces and 2-pound packages of buckwheat flour have lost a half-pound. In regard to all these goods which fill the shelves of grocery stores and markets the prices are about the same as when this reduction in quantity began, it ought to be said. Tho sometimes they're higher.

When crackers—the ordinary household crackers—began to be packed in sealed pound packages the packages weighed 16 ounces—perhaps box and all, but still the 16 ounces were there; they have dwindled to 7 in some cases.

One kind of canned meat which sold at \$1.90 a dozen to the retail grocer three years ago he now pays \$3.50 a dozen for and in those days the individual cans weighed 2 pounds; they now weigh 1½ pounds—their sides depressed to bring this about. And lard. Time was when the usual family size of lard bought was the three-pound pail and there was three pounds of lard in it. They don't mark the pails in pounds now, they are "small," "medium" and "large" and the one which sells at the same price as the old three-pound pail contains 2 pounds, 5 ounces of lard.

Packages of rolled oats used to be marked with their weight, but they are no more. Now we have the "family size" package and when the net weight comes to be marked on it the surprise will be that it is possible to fill so large a space with so little cereal. Some dried or cured meats are packed in glass. It has been the easiest trick of all to have glass jars made so that there is twice the amount of glass that there used to be and, of course, just that much less

meat inside. The gross weight is the same and the package is the same size—and certainly costs no less.

Many things put up in glass are handled likewise. There used to be 32 ounces of syrup in the standard bottle; now there are 21, tho the outside of the bottle is the same size and looks as much like a quart bottle as ever. Ten-cent jars of honey have shrunk from 8 ounces to 5, and in the flavoring extracts some bottles of the 2-ounce size actually hold less than an ounce.

Chili sauce which costs the retailer \$2.40 a dozen bottles and sells at 25 cents each can be found in bottles less than half as large as it used to be sold in. An interesting sidelight on this is the fact that in the case of imported pickles, of which we use a great many, the bottles hold a full pint just as always, while in American pickles one gets about two-thirds of this quantity.

Coffee is consumed in about every family and much of it is purchased in sealed cans, ground ready for use. The retail grocer who would could show a series of cans in which the contents have shrunk from 16 ounces thru intermediate amounts to 12 ounces—but not marked "one pound" any more, of course. This would violate Federal and State pure food laws. If weight or measure is stated on the outside of the package and the contents do not live up to this statement, that breaks the law we have had right along.

Disturbed by Dr. Wiley in many of their practices, makers of canned jams and jellies have found it easy to even up by reducing the quantities in their jars perhaps one-half—but not the price at all. This soft cheese which is sold in jars has also been the subject of this quantitative reduction—to a matter of, say, two-thirds of the former amount packed, while the price has gone up.

No article furnishes a better illustration than baked beans, canned in many styles and sold to an almost incredible total. The contents of baked bean cans have gone down just about twenty-five per cent. The 3-pound can now weighs 2 pounds, 7 ounces, gross; the 2-pound can has a gross weight of 24½ ounces and, can and all, the one-pound can weighs 12 ounces.

It must not be thought that all this reduction in quantities is confined to the small package goods, where it started. Others have been quick to see the advantages of it and now a bag of oats doesn't contain the 96 pounds it is supposed to—about 82 to 90 is its gross weight. A bag of corn is expected to weigh 110, but this has become a scant 100 pounds. Even barrels of flour are short weight and much of the fruit shipped to the jobber or retailer is short count.

Now as to what this all means—in a concrete instance. Previous to 1909 the State of Connecticut had no law requiring that creamery butter should be sold in packages marked with its net weight, and a Vermont creamery salesman is authority for the statement that in those halcyon years there was a clear profit of \$10,000 in the short weight alone on every \$100,000 worth of print butter shipped to Connecticut!

The Connecticut householder paid \$110,000 for every \$100,000 worth of butter that went onto his table. Small wonder he complained of the high cost of living—only very likely he laid it to the political party then in power.

There is a side to this situation more cheerful to look at. Not all of the packers of package goods have been up to these tricks. Those who haven't, most of them, belong to the American Specialty Manufacturers Association, which is on record in favor of the legislation to stop them and is desirous of Federal legislation on the subject. Not all the members are particularly enthusiastic over such regulation of their business, by any means, and some only favor it because they see the handwriting on the wall—and some don't favor it at all—but as an association it is supporting these measures and some of its members have done mighty good work in that way.

Some of these manufacturers were putting up their goods in honest packages before there was any agitation of this subject, have always, indeed—and without taking special credit to themselves for it, either; and the head of the association's legislative committee in his annual report urged all to get into line and anticipate the passage of net weight laws by States which had not passed

them. The chief thing the association is working for is uniformity.

There is a considerable difference in the laws already passed, tho the basic idea of requiring the net weight, measure or count to be stated on the label is uniform in all. Not all of the laws use the words, numerical count. In North Dakota and Nebraska the laws include beverages among those articles which must be labelled with their true net measure and it is possible some of the commissioners will construe the laws in other States to do this. In South Dakota even boxes of berries must be stamped with the net weight of the fruit.

The penalties for the misdemeanor of non-compliance with these laws ranges from a five-dollar minimum fine in Connecticut to a \$500 maximum in Nebraska, and for each offense, Nevada, which has a comprehensive and stringent act quite outside its pure food act, adds the possible penalty of sixty days in jail as alternative or addition and also provides that the offender must reimburse the person injured by his law-breaking to three times the amount of his damage and \$20 besides. The Connecticut law exempts from the operation of the law packages of confectionery or shelled nuts sold for 10 cents or less—the result of a hard fight of confectionery manufacturers.

For it must not be supposed that these laws have been passed without opposition of the most powerful lobbies obtainable by manufacturers of package foods—some manufacturers—and wholesale grocers. Even some retail grocers have been induced to use such political strength as they had, in one State or another, against this remedy for an outrageous state of affairs, and the prompt and efficient support given by the manufacturers spoken of, who favor such legislation, has been of all the more value because of this.

Connecticut was the first State in the conservative East to pass this law and there the fight over it was especially energetic on both sides. The bill was the ewe lamb of Aaron Johnson, representative in the lower house from Manchester and a retail grocer, who had not been able to get it passed during his first

term in 1909. One of its earnest opponents was Representative Miner of New Britain, another grocer, and the fight was taken right onto the floor of the House. Johnson brought samples of all sorts of package goods, samples of those he was selling now and of the sizes and packages sold five or six years ago and saved for just this purpose.

Probably the object lesson thus afforded, well nigh unique in an Eastern State, had more to do with the result than any other factor except his own untiring preaching of the doctrine to anyone who would listen. Anyway, he won.

The Connecticut law has one poor feature, though. In addition to providing for slight variations and incidental tolerances to be determined by those in whose hands the law's enforcement lies, as most of the States which have passed this law do, Connecticut gives the foodstuffs prepared within eighteen months after the passage of the act, which was approved July 11, 1911, immunity from its provisions.

The Stevens bill now before Congress does the same thing and includes articles imported within this eighteen months as well as the domestic product. None of the other States which have passed this law extend any such sunshine period for haymaking. In some the date of enforcement of the law rests with the food commissioners and in all the idea is to set a date after which all goods coming into the State must be labeled with the net quantity in the package, all goods in the State at that time being immune. In South Dakota and Wyoming this date is fixed in the laws as July 1, 1911.

The net weight law in Florida was prepared and put through in a hurry on June 5, 1911. The State Commissioner of Agriculture was empowered to enforce it and made August 3 the date of such enforcement. He agreed to let stickers protect the goods then in the State until the following January 1; all

goods received after August 3 must be labeled in accordance with the law. He was finally induced to defer the initial enforcement until January 1 and at length altered that to August 1, 1912.

The city of Seattle has come down hardest on the packer of foodstuffs who skimps his package. Its ordinance requiring labeling with the true net weight was passed last fall and went into effect immediately, despite frantic efforts in opposition.

The movement for open-faced packages has gained a great headway and in connection with it cognizance has been taken of other articles of food which would not exactly come under the net weight law. For instance, several States now have bread laws. Kansas enacted one in 1909 and Massachusetts has had one since before that. Nevada's comprehensive law has a provision governing the size of bread loaves. The first two States make a legal loaf of bread 32 ounces and provide for three-quarter, half and quarter loaves. Nevada's legal loaf is one pound in weight.

This gets somewhat into another phase of the short weight and slim measure practices in this country, to be sure. It has to do with the work of weight and measure inspectors in various cities over the country. That work is local, however, and bound to be; this matter of net weight on sealed packages is not; but of course both have to do with that tremendous drain on the pocket-book of the American people from the fact that the eatables we buy do not hold out as they used to.

Merchant and manufacturer have thoroly grasped the notion that price is not the only variable factor which can be looked to for an increase of profit in articles sold by weight or measure and the consumer is entitled by the very fact of his American citizenship to all possible protection against methods which so affect the high cost of living.

WATERBURY, CONN.

The Tabulated College Woman

BY MARION FLORENCE LANSING, M.A.

[In view of the approaching seventy-fifth anniversary of Mt. Holyoke College in October the following article giving the results of the recent census taken of the Alumnae of Mt. Holyoke College is of much interest. The author wishes to acknowledge her indebtedness to the college officers for access to the records and to Miss Amy Hewes, professor of sociology, for the use of certain tables compiled by her.—EDITOR.]

THERE are four thousand of us living graduates of Mount Holyoke.

Half of us are from the seminary in the years when there were no colleges and the "higher education" which we were receiving was looked upon as a startling and perilous innovation. The other half of us have Bachelors' degrees. Last year the college undertook a census of its graduates, asking us, beyond the bare facts of name and address, to give an account of ourselves for the years since graduation. Our responses, gathered in this informal way, prove to be of interest not only to our Alma Mater as justifying to her the years which she spent in training us, but also to the outside world, which has still a habit of speculating about the "educated woman" as if she were a strange species. At least they answer some of the questions that are always being asked about us, and answer them with figures which are not only fairly representative in point of numbers, but have also the distinction of covering the longest period possible to any such records, for Mount Holyoke will celebrate in October the seventy-fifth anniversary of its founding.

The first question always put to us is, "Do you marry?" We do, almost half of us (44.79 per cent. of our total 4,076, to be exact), and this altho a large proportion of us live in New England, where all statistics give a low marriage rate, and altho these records ignore completely the whole body of non-graduates, among whom in the earlier years the number of marriages was much greater. Even more interesting, perhaps, we stay married. In all this number there has not been a single divorce, and only three legal separations.

Whom do we marry? College graduates, in a steadily increasing ratio. Of the seminary graduates responding to

this inquiry, just half had married college men; among the college alumnae the per cent. begins at 55 and goes up in the last decade to 60. We marry rather late, most of us in our twenty-eighth year, and, strange to say, our third generation (of the last twenty years) has married fully as young if not younger than our first and second. This may be accounted for partly by the fact that the age of graduation has steadily lowered, and partly that the first two generations lived thru periods of great economic depression. In the decade from 1870 to 1880 the average age of marriage went up to thirty and one-half years.

Do we have children? We do, and here again it is interesting to note that the youngest generation seems likely to have the most. The number of answers from which we must draw our conclusions on this point is small; but 535 living seminary mothers had 1,425 children, or 2.66 to each woman, while in the last twenty years the college graduates have already had an average of 2.47 children apiece, and two-thirds of those are young women who may reasonably be expected to have more. (This average is rather above the usual proportion of women of this class of society.)

Half of us, however, do not marry, and most girls who do marry engage previously for a shorter or longer time in some remunerative occupation. Of all the college graduates of Mount Holyoke 82 per cent. have done something to earn a living, and of the unmarried Bachelors of Arts, 83 per cent. are now at work. It is a striking commentary on the enterprise of the college woman that one-third of this, our youngest generation, has gone on to take more advanced training. We point with pride to one-fifth of this little group who have already received higher degrees. That a great deal of this

post-graduate work, both academic and vocational, has been done within a year or two of graduation seems to indicate that the lowering of the age of graduation to twenty-one years and eight or ten months makes possible in many cases an extra year of specific professional training for the ambitious girl. This additional education, and indeed college education in general, does not seem from the meager reports received to have found as yet an adequate economic return. The salaries are all comparatively low considering the length of training; the salaries of the teachers, who make up from 75 to 82 per cent. of the working women, have a low maximum. In view of the present movement, represented by the appointment bureaus in New York and Boston, to guide college women into occupations other than teaching, it is worth while to notice that the girls in such occupations seem to be receiving slightly more than the teachers, and that in these outside employments are found our few best-paid women.

These non-teaching wage earners are the most interesting of us all. Their number is rapidly increasing, and during the last twenty years their employments are coming to lend themselves to regular classification, with a respectable showing of persons in each group—in nursing, 15; in journalism, 25; library, 50; business, 42; social work, 16; secretary, 54; research, 6; Y. W. C. A., 23, etc., etc. But the center of interest is already shifting—so soon do we become accustomed to new fields—from these occupations which were so new in the 90's, to the vocations which appear on our lists with a single pioneer. We pass over even the reporters, the social workers, and the pastors' assistants to read about our violet grower, our florist, our orange grower, our three managers or proprietors of tearooms, our two chemists, our bridge designer, our lawyer, our mercantile inspector, our bank officers, our real estate broker, our hotel manager, our mosaic window designer, our partner in a dry goods shop, our manager of a jewelry business, our two house furnishers and decorators, and our farmer. These are the women who

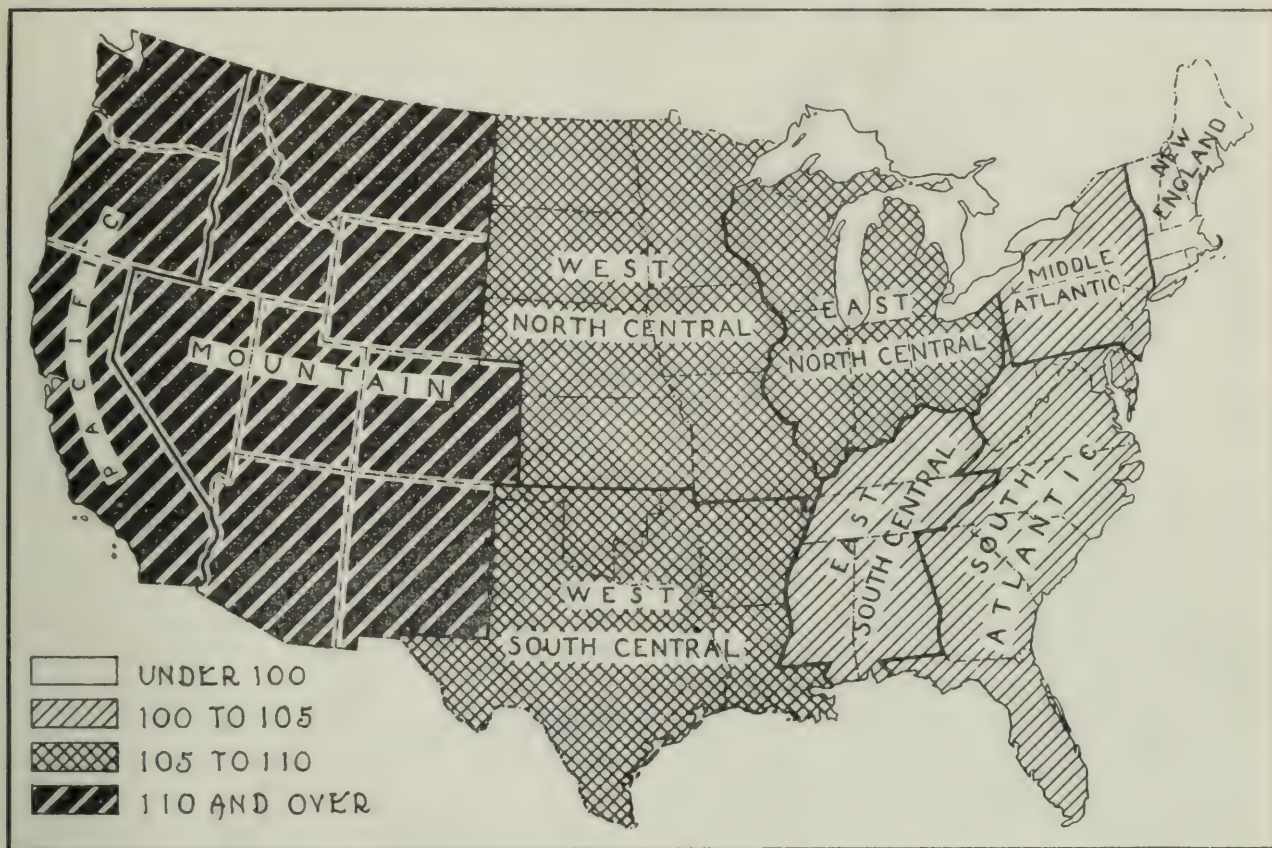

catch our fancy and tempt us to prophesy about the future of the trained woman. When we have read of these adventurous persons and wondered about the money returns from their undertakings, we pick up our table of dates and find that many of them are not recent graduates, who might be supposed to have indulgent fathers to finance their schemes. Of the 400 who report themselves as engaged in occupations other than teaching, 100 belong to classes from 1859 to 1889, which would make them from forty-five to seventy-five years old. It is with these *alumnæ* that we can meet the criticism that all such statistics cover too short a period to be of economic importance. Here are 100 women who undertook these vocations twenty, thirty, forty years ago, and have found in them a means of livelihood and a life work. Fifteen of them are physicians—a noticeably large percentage—three are college officers, ten nurses, fourteen are in libraries. The unusual, as well as the specialized, callings are well represented in this group. Here are found the orange grower, here the druggist, the real estate broker, the bridge designer, and a dozen more. Nor would any record of past or present be complete without a mention of those women who are in danger of slipping out of sight in our tables under the modest heading of "married" or "teacher," who have chosen that most hazardous calling of all, the career of foreign missionary. Mount Holyoke's missionary tablet of the first fifty years of her history has on it the names of 178 women who gave themselves to this service. Among living graduates the first two generations have still twenty-two on the foreign field, and the third generation has thirty-eight.

With them our record closes. No one claims that it is a remarkable one. It is the more valuable that it is not. We are always suspicious of statistics gathered to prove this point or that. The analysis of this census makes simply one more chapter in the story of the trained woman, and shows how as grandmother, mother and daughter she finds her place in the community and makes use of the education that has been given her.

The Proportion Between the Sexes

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

THE returns for the last census showed that in this country the males outnumbered the females by about 2.7 millions, giving a proportion of 106 males for every 100 females. In the diagram at the top of the page the shaded surfaces represent the number of males to 100 females. In the New England States we find that the females outnumber the males, while the proportion of males to females increases westward.

Division.	Males per 100 females.
United States	106.0
New England	99.3
Middle Atlantic	103.3
East North Central	106.0
West North Central	109.9
South Atlantic	101.2
East South Central	101.9
West South Central	107.2
Mountain	127.9
Pacific	129.5

There are only six States, including the District of Columbia, in which the females outnumber the males. These are Massachusetts, Rhode Island, Maryland, District of Columbia, North Carolina,

South Carolina. All of these States had an excess of females in 1900, and in addition there were five other States—New Hampshire, New York, New Jersey, Virginia, and Georgia—which at that time had an excess of females, but now have an excess of males.

Among the native whites of foreign parents and the negroes the females outnumber the males, altho the excess is very small. Almost all of the excess of males can be credited to the foreign born, among whom there are 129.2 males to 100 females. In 1900 there were 104.4 males to 100 females in the total population, so that the proportion of males in this country is evidently on the increase. This increase may be attributed to immigration.

Among the births the males are generally a little more numerous than females, but the higher mortality to which males are exposed as a rule leaves the females in excess after the fifteenth year. Were it not for immigration it is possible that the females in this country would slightly outnumber the males.

NEW HAVEN, CONN.

Literature

The Everlasting Mercy

JOHN MASEFIELD'S volume, *The Everlasting Mercy*,* contains two long narrative poems, "The Widow in the Bye Street" and the title piece, the shorter of the two. With its publication, one is conscious of a new life in British verse, and a new freedom.

"The Everlasting Mercy" tells the story of a young ne'er-do-well's regeneration from unthinking lawlessness and vice. The state of soul is carried swiftly from sodden degradation thru satiety to the revolt and sudden revulsion which leads to final serenity and service. The pulsating octosyllabic verse well fits such a story. This, and the unflinching detail with which the background is picked out, make it much more than a preachment cluttered with "realism." Whole pictures are painted with a few lines:

"I've marked the May Hill ploughman stay
There on his hill, day after day
Driving his team against the sky,
While men and women live and die.
And now and then he seems to stoop
To clear the coulter with his scoop,
Or touch an ox to haw or gee
While Severn stream goes out to sea."

The most drab details of the poem only emphasize the final exultation of spirit. Unlike some of Mr. Masefield's other work, "The Everlasting Mercy" leaves no loose threads. It has all the modern "uplift" note, but at the same time it is less a stereotyped tract than an inversion of "The Rake's Progress."

If "The Widow in the Bye Street" does not attain the instant popularity of such a poem as Tennyson's "Maud," it may be because the times have changed as much as the poets. The very mass of contemporary verse buries beneath it the slender treasure of real poetry. The public is today indifferent, or perhaps it would rather see tragedy disguised as meandering melodrama, with sentimental interludes. In the

tragedy of "The Widow in the Bye Street"—for it is tragedy—there is neither meandering nor mawkishness. Four characters are sufficient to fill its swift story: a brutal and bestial shepherd; a light woman; a boy, eager and impulsive; and his mother, infinitely patient, infinitely wise in her own way, infinitely loving. The torrent of events and surge of passions cannot make the reader forget her. She leaves a memory of uplifting beauty over the whole poem, just as her own song touches the hearts of the reaping peasants:

"Dully they watch her, then they turn to go
To that high Shropshire upland of late hay;
Her singing lingers with them as they mow,
And many times they try it, now grave, now
gay,
Till, with full throat, over the hills away,
They lift it clear; oh, very clear it towers
Mixed with the swish of many falling flowers."

The free stanzaic form of this poem gives it greater breadth and nuance than "The Everlasting Mercy." Stanzas, and images represented in several lines, rather than individual lines, are, however, what stand out after we have read either narrative all thru. Many readers will feel that Mr. Masefield employs realism which not only calls a spade a spade, but insists on calling a shovel a spade also. But the poems are not pivoted on degradation; they escape the hopelessness of slum studies. In both the environment is the countryside; one feels that beauty and hope lie just around the corner for those who wish to make the step.

Stover at Yale

OWEN JOHNSON deserves the gratitude of all Yale men, but he will not get it—at least not now. Tho he has given us probably the best story of college life yet written—certainly the best since "Tom Brown at Oxford"—he has dared to criticise his Alma Mater, and that does not "go" at Yale. We fear, therefore, that Mr. Johnson has "queered" himself "for keeps." Already the familiar charge

*THE EVERLASTING MERCY. By John Masefield.
New York: The Macmillan Co. \$1.25.

of "sorehead" and "knocker" is being raised by the vested beneficiaries of privilege and "things as they are," and Mr. Johnson, be it remembered, did not make a senior society.

*Stover at Yale** is a study in adolescent psychology. The author has caught the swift action and serio-comic flavor of college life and woven it into a well-wrought novel such as any writer could be proud of. Stover is the "real stuff" at bottom. He instantly becomes a "hero" by making the eleven in freshman year. This puts him in line for all the college honors. He has latent democratic instincts, however, and does not hesitate to mingle at times with the "wrong crowd." This "queers" him with the "right crowd." But he holds fast to what he believes right and "Bones" finally rises to the occasion and "taps" him last, thus conferring upon him the most enviable honor that can be given to a Yale man. Last, but not least, the judge's daughter graciously accepts him.

The career of Stover is therefore that of the "successful man." To be a success at Yale one must "make" a senior society. To make a senior society, one must have at least two qualifications—first, he must be a gentleman; second, he must have done something for Yale. To do something for Yale usually means to take some prominent part in the extra-curriculum activities which now absorb so great an amount of the undergraduates' thought and time—athletics, journalism, dramatics, and even Y. M. C. A. work.

In olden times what hours the Yale undergraduates had over and beyond those given to studies—and they were not a few—were devoted to smoking pipes and singing glees. It was a jolly life they led. Undergraduate life today, however, is a serious business. Work, work, work is the rule—and almost any kind counts toward society honors except "grinding." Dean Jones, for instance, has recently had to exact a promise from all "heelers" of *The News* that they will not, on their honor, work nights before 7 p. m., or after 12 p. m.

It is this over-organization of college life and the mumbo-jumbo of the secret societies that Mr. Johnson attacks in his

novel. As to the "working for Yale" idea, this is the way he expresses himself thru the character of Brockhurst:

"Work for Yale! Work for Princeton! Work for Harvard! Bah! Sublime poppycock! Of all drivels preached to young Americans that is the worst. I came to Yale for an education. I pay for it—good pay. I ask, first and last, what is Yale going to do for me? Work for Yale, go out and slave. Give up my leisure and my independence—to do what for Yale? To keep turning the wheels of some purely inconsequential machine, to strive like a gladiator. Is that doing anything for Yale, a seat of learning? If I'm true to myself, make the most of myself, go out and be something, stand for something *after* college, then ask the question if you want. Ridiculous! Hocus-pocus and flap-doodle! Lord. I don't know anything that enrages me more."

Mr. Johnson's views on the senior societies, likewise exprest thru Brockhurst, are as follows:

"The harm is that this mumbo-jumbo, fee-fi-fo-fum, high cockalorum business is taken seriously. It is the effect on the young imagination that comes here that is harmful. Dink, I tell you, and I mean it solemnly, that when a boy comes here to Yale, or any other American college, and gets the flummery in his system, believes in it—surrenders to it—so that he trembles in the shadow of a tomb-like building, doesn't dare to look at a pin that stares him in the face, is afraid to pronounce the holy sacred names; when he's got to that point he has ceased to *think* and no amount of college life is going to revive him. That's the worst thing about it all, this mental subjection which the average man undergoes here when he comes up against all this rigmarole of Tap Day, gloomy society halls, marching home at night, etc., etc. . . ." "Curious," said Brockhurst, turning away, "the architecture of these sacred tombs is almost invariably the suggestion of the dungeon—the prison of the human mind."

Perhaps the most delicious irony of the whole book is the fact that Mr. Johnson does not think it important to refer to studies or the faculty at all except in one single instance, where he makes Le Baron give this advice to Stover:

"Now you've got to do a certain amount of studying here. Better do it the first year and get in with the faculty."

The truth is the faculties in some of our educational institutions today have to a censurable degree allowed the students to "get away" from them, and they do not seem to have the wit or courage to regain their proper ascendancy. When they make the attempt they run the risk,

*STOVER AT YALE. By Owen Johnson. New York: F. A. Stokes Company. \$1.35.

of being kicked upstairs into politics, like Woodrow Wilson.

What the students most need today at Yale and elsewhere in a closer and more continuous personal association with the faculty *in working hours*. However much a man may learn from his classmates in the way of manliness, courage, the square deal and the capacity to take hard knocks cheerfully, he needs even more the mellowing influence and noble inspiration that come only from the close friendship of older men. If now at last the consciences of faculties and students have been pricked, as seems to be the case, Owen Johnson deserves credit for it, and *Stover at Yale* may become known hereafter as the "Uncle Tom's Cabin" of the sane academic life.

History and Heresy

THE reading of such studies as those contained in these able and accurate volumes* will do much to clarify the religious thinking of our own time, and will no doubt shatter some traditional notions founded on legends rather than on fact; but we must attribute the results to the radical and unyielding demands of history rather than to the heretical tendencies of the writers. Their work maintains the high standard of excellence reached by the best of their predecessors in the series of "Studies in Theology," and presents unusually clear and concise surveys of their respective fields of thought, without losing the valuable quality of being readable. The task of Principal Workman was undoubtedly the most difficult because of the long period of time and the diversity of materials to be covered in so modest a volume, but his work, with rare exceptions, has been well performed. In the discussion of the Athanasian controversies the author's consciousness of his own point of view seems to have led to some obscurity as to the real forces at work and the issues involved, and one could have wished for

more adequate treatment of the fourteenth century preparation for the Reformation. The fine chapters, however, on the influence of Hellas and the genius of Rome as related to Christian thought are more characteristic of his book as a whole.

Theological students who have learned to expect much from the pen of Professor M'Giffert will not be disappointed in reading his volume on *Protestant Thought Before Kant*, so admirable in the selection and arrangement of its materials, in its emphasis on essentials, its just estimates of men and movements, and its scholarly grasp of the development of religious thought. Dr. M'Giffert is an investigator in the sources and a master of the literature of his subject, but the traces of the specialist are largely obliterated by the positive and lively style and the omission of unnecessary references. The gradual growth of the modern spirit and its final clash with the medieval system which Protestantism inherited from the past is effectively described.

It is altogether likely that the attacks beting made on Professor Brown because of the views exprest in this volume on *The Christian Hope* will perceptibly increase the sales of the book, but its contents in no wise deserve the opprobrium attached to heresy, nor should its interesting and instructive pages require the notoriety of being stamped as unorthodox to secure a wide circulation. Professor Brown gives a short but careful history of the origin and development of the belief in immortality so far as it can be traced in Christianity and in other religions that have in any way contributed to the Christian doctrine. Special emphasis and prominence are given to the contribution made by the teaching, character and resurrection of Christ. The various forms which the Christian hope has assumed are compared, and objections to faith are criticised and answered. The author always writes with sympathetic insight, with full knowledge of the difficulties to be met, and with the consciousness that he is handling a subject of supreme significance for religion. It would be hard to find a more persuasive apology for the Christian hope of immortality or a book in which the elements and grounds of that hope are so clearly defined.

*CHRISTIAN THOUGHT TO THE REFORMATION. By Herbert B. Workman, M.A., D.Litt., Principal of the Westminster Training College. PROTESTANT THOUGHT BEFORE KANT. By Arthur Cushman M'Giffert, Professor of Church History in Union Theological Seminary, New York. THE CHRISTIAN HOPE: A Study in the Doctrine of Immortality. By William Adams Brown, Ph.D., D.D., Roosevelt Professor of Systematic Theology in the Union Theological Seminary, New York City. New York: Charles Scribner's Sons. 75 cents each.

The Story of the Soil from the basis of absolute science and real life. By Cyril G. Hopkins. 16mo, pp. 302. Boston: Richard G. Badger.

This is an odd book. It has a love story running thru it, and it has an index, not a usual appendix to a novel. And yet it is not really a novel, but a scientific book on agriculture by the head of one of the agricultural departments connected with the University of Illinois. Professor Hopkins is the author of this excellent textbook, "Soil Fertility and Permanent Agriculture," and much of the data in that work is embodied in this story. There is just enough story to entice the less willing reader to absorb some of the latest results of soil analysis and commercial fertilizers. The young man of the story sells a farm in the corn belt of Illinois, visits Virginia and New England, with a view to purchasing a worn-out farm and building it up. He finally buys such a farm in the Egypt of Illinois, and by the methods, carefully explained, restores it to fertility and profit. This requires impossible dialogs and letters on scientific husbandry, even in the love-making, and one who reads and digests it will make a better farmer. The substance of it is, analyze your soil; see what element it lacks, nitrogen, potash fosforus, lime, and add it with proper rotation of crops. We should mention that he got his girl.

When Neighbors Were Neighbors. By Galusha Anderson. Lothrop, Lee & Shepherd Company. \$1.20.

When Neighbors Were Neighbors takes us back to a time when, in the Eastern tier of our States, the farmer was accustomed to guide the plow and strengthen his legs in following the team; when, early in the day, he turned the new-mown, dewy grass with a pitchfork and got a good pair of muscular shoulders and a reasonably sure back thereby, without having a bill to pay at the gymnasium; when he ate his own wheat and corn without a chemical analysis of each kernel and a separation of the elements into social castes—"rich man, poor man, beggar man, thief"—for the benefit of the health-food middleman. Mr. Galusha Anderson thinks that time was a good old time, worthy of reconstruction in a novel, and he selects a very

honest tho somewhat humdrum couple, puts them thru their old-time courses, with knapsacks on their backs filled with the dear old practices that prevailed in the country districts before the Lawrence operatives arrived *en masse*, and pleases himself, and probably will please all the lovable old folks who survive from that kind of life. The knapsack and its contents are more important to the author than the love story, that is plain. The story would not find favor with the magazine reader of today, not one little bit. Not even his heroine and hero, John Erskine and his wife Lucy, one imagines, would care to be tied down to the tale of love, if they could get a real "Nick Carter" or a "Sherlock Holmes" sensation easily.

The Philanthropic Work of Josephine Shaw Lowell, Containing a Biographical Sketch of Her Life together with a Selection of Her Public Papers and Private Letters. Collected and Arranged by William Rhinelander Stewart, President of the New York State Board of Charities. New York: The Macmillan Co. \$2.

One of the many noble women of New York whose efficient activities have for many years past been behind great and salutary reforms, Mrs. Josephine Shaw Lowell had many advantages of birth, social status, leisure and executive ability to fix her place in the front ranks with the leaders. Tho the silent workers were many of them equally efficient and equally constant in their devotion to the cause of social betterment among both women and men of the under strata of life, she became notably prominent as a leader—prominent, yet withal modest, unassuming and productive. Her biographer presents a pleasing record of her early enthusiasms of the war period, of her association with noble names and glorious action, but devotes the main part of the volume just published to the story of her public usefulness in regard to practical reforms. It is a story of inspiring advocacy, with tongue and pen, of organized charity. A fine soul was hers, a stirring mental temperament, a never-tiring hand. It should not detract from the honor due to her that the biographer, in his enthusiasms, sometimes forgets that there were many sweet and

abundant springs, many bright streams flowing to the same sea, not as affluents to the one wide flood of which he makes himself the historian, but as independent tributaries to the great main, draining wholly different areas of the mighty plateau of difficult action. Biography surely need not drop into the habit of those railroad mapmakers who so lay out a continent that all roads but their own become a confused tangle of spectral and vanishing lines. The reader of this appreciation of a fine life may well wish that a larger instalment of her letters had been left to tell us more of the modest, kindly, large-minded woman Mrs. Lowell really was.

Vistas of New York. By Brander Matthews. New York and London: Harper & Brothers. \$1.25.

A dozen brief sketches and stories make up Prof. Brander Matthews's *Vistas of New York*. "Snapshots or flashlights of one or another of the shifting aspects of this huge and sprawling metropolis of ours," he calls them, and they are good, realistic studies, all of them, of simple life, and most of them sweeter and more lifting than present-day tales greatly favor. Whether the magazine missionaries say so or not, it is good for the average honest man or woman, who has done no wrong, to have a holiday now and then from a too attentive search into the seamy side of life—a Sunday, perhaps, when he may "loaf and invite his soul." There is a seamy side, to be sure, in two or three of Professor Matthews's more serious tales, into which the reader may plunge a little, but the sun and moon and stars shine even there a little at midday or midnight. Pat McCann, for instance, throws light on Tammany methods. A bit of real human nature is shown up in salesladies, who are all "Sisters Under Their Skins." "Under an April Sky" shows us what shopping in the matrimonial market means. Then there is a young doctor, who finds that he must have either a bald spot or a wife to insure himself a profitable clientele. An eager first wife writes a tender post-mortem letter to wife number two all about "John." This is about as far as the author chooses to go in the direction of the "slums." There isn't a

single downright villain anywhere, nor any very uttermost and altogether immitigable leach, shirk or grafter—for which thanks to the author, who has altogether a saving and healthy humor. We commend the twelve skits and stories to the restless scribes of the day, and urge them to hunt for the key to Professor Matthews's method of writing what is interesting but not sensational.

History of German Civilization. A General Survey. By Ernst Richard. New York: The Macmillan Co. \$2.

This is an unusually comprehensive work both in time and topic. It begins with the neolithic age and it extends well into the twentieth century. It traces thru the ages not only the political changes, but the religious, industrial, literary and scientific development, and is therefore more valuable and more interesting than the chronicle of kings and courts that used to pass for history. The author is particularly successful in his interpretation of the present day tendencies in art and life, and we wish he had devoted more chapters to this, for there are few things we Americans need more than a better comprehension of the real significance of this civilization now becoming a dominant influence thruout the world. We still see Germany thru British spectacles, notwithstanding the large Teutonic element in our population.

British Trees: Including the Finer Shrubs for Garden and Woodland. By the late Rev. C. A. Johns, edited by E. T. Cook. 12mo, pp. xvi, 285. New York: E. P. Dutton & Co. \$3.

The present is an old book which is very properly furbished up in a new edition, illustrated with some twenty-five colored pictures and more engravings of trees and shrubs. Since the book first appeared there has been a great change in British gardens by the introduction of new shrubs especially, and the editor has added chapters about them. Mr. Johns was a collector of literary data on trees, stories and myths, and has adorned his accounts with them, while the additions by the present editor are more botanical and horticultural. It is an attractive and instructive book, rather for the general reader than for the gardener, altho we are sometimes surprised, as in the pic-

ture of the pine, to see one scant of leafage, which has lost its leader and sends up two twin stems.

Surgery and Society. A Tribute to Listerism. By C. W. Saleeby. New York: Moffat, Yard & Co. \$2.50.

This is a very useful book and much needed now when unjust attacks are being made upon modern surgery by people who are well intentioned but ignorant of scientific ideals and methods. Dr. Saleeby, fortunately for our nerves, does not dwell upon the horrors of "surgery as it was" before the discovery of anesthesia and antiseptics, but turns quickly to the more encouraging picture of the present day, when knowledge based upon experiment is taking the place of tradition and blind benevolence. The chapter on "Motherhood and Listerism" is an effective sermon from the text "Faith without works is dead," for in it he shows how much is actually being done to make effective the petitions of the Litany for safety of mothers and young children, tho Dr. Saleeby fails to realize that these praying millions have been the motive power for the development of medical science, in which he justly takes such pride.

Napoleon the First. A Biography. By August Fournier. New York: Henry Holt & Co. (2 vols.). \$8.

In the maze of Napoleonic literature augmenting day by day, Dr. Fournier's life of the Emperor continues to hold that position which it attained shortly after the first edition in 1885, and English-speaking students will be happy to have this new translation, based upon the author's revision of 1904-1906. The merits of Fournier's work cannot be enumerated within the limits of a brief review. His work is artistically and thoughtfully balanced, and he carries the Great Adventurer from his cradle in Corsica to his grave in St. Helena. The author has had always in mind the general reader, who is perhaps as deeply interested in the battle of Jena as in the Code Napoleon. In the popular mind the military career of Napoleon will overshadow his legislative and administrative work, altho in fact the brazen glories of war were transitory, while the

legal work of the imperial regime abides with us today. In addition to being a well-balanced biography, Dr. Fournier's work is as straight-visioned as the frailties of man will allow, for amid the jangling of much controversy he has tried to discover and relate the truth, instead of confirming ancient prejudices. In seeking this truth he has spared no pains, for one who has dipped rather deeply into the life of Napoleon here and there will be surprised to find in these modest pages traces of "the latest word" from distinguished searchers in Napoleonic sources. Finally, there are in these volumes the advantages of clarity and readableness which are enhanced rather than obscured by the obviously careful work of the translator. Whoever would know the authorities for any statement or any conclusion in the text may satisfy his thirst for "die Quellen" by referring to the ample biographies at the end of each volume. If the reader can have but one work on Napoleon, by all means make it August Fournier's.

The True Daniel Webster. By Sydney George Fisher. Philadelphia: J. B. Lippincott Co. \$2.

Mr. Fisher has been for several years the devoted writer of "true" history and biography. His works on Penn, Franklin and the American Revolution dealt with a period in which he was familiar with the sources and general literature, and afforded more than once a wholesome corrective to the point of view of more orthodox historians. His new volume on Daniel Webster reveals more of the author's personality and less learning than its predecessors. He does not appear to have brought to light any new sources or to have consulted more than the printed collections that are available everywhere. The book is readable, but contains few of those startling judgments that we are in the habit of associating with Mr. Fisher's "truth." It might, indeed, have been written by a historian, and contains no attacks upon historians as a class. It falls in line with the present trend of criticism which rescues Webster from the unfair obloquy thrown upon him by the despondent abolitionists after the seventh of March speech.

Literary Notes

....The new volume by Prof. Henry A. White is a repository of information concerning *Southern Presbyterian Leaders* (Neale; \$3), and their work from the days of Francis Makemie, who organized the first American Presbytery, down to the present time.

....A number of real life stories, disclosed thru mission work in New York, are told in *The Underworld and the Upper* (Eaton & Mains; \$1) by Charles A. Starr. The subject matter is similar to that used by Harold Begbie, but the narratives are less vivid and dramatic.

....Don C. Seitz has given us in *Surface Japan* a sympathetic and intimate "swift survey" of a trip to the Land of the Rising Sun. The volume is beautifully illustrated with original decorations and colored photogravures and is a handsome gift book. (Harpers; \$1.10.)

....The *Lyric Year* contest for a first prize of \$500 and two second prizes of \$250 each will close on June 1st, and the *Lyric Year* for 1912 will be published November 1st. There is still time for the submission of poems by American authors. Details of the contest may be learned from the editor, *The Lyric Year*, c/o Mitchell Kennerley, Publisher, New York.

....*The History of America* is sketched in a series of sonnets by Henry Frank (Sherman, French & Co., Boston; \$1.35), a hundred and twenty-three pages of sonnets explained in a hundred and thirty-four pages of historical notes. Those who love their history that way, and who find the sonnet a passport to historical exploitation are recommended to try this easy path to enrich the brain.

....Jack London has taken Hawaii as the scene for his new volume of short stories, *The House of Pride* (Macmillan; \$1.20). With his customary love for the physical, he has presented the romantic tragedies of the leprous, on the other hand depicting in one story "Chun Ah Chun," the minute features of a wily old Chinaman who gets the better of his family. The tales are too fragmentary for power or vividness.

....The second series of the Humanist's Library, edited by Lewis Einstein, will include the *Correspondence* of Hubert Languet and Sir Philip Sidney, edited, with an introduction, by W. A. Bradley; Durer's *Letters* describing journeys to Venice and the Low Countries; the *Platonick Discussions upon Love* of Pico della Mirandola, and the *Galateo* (of manners and behavior) of Giovanni della Casa. The

books in this library are printed in a form which respects the great traditions of the art in its earliest days, and it will be a pleasure to read the works just named in the beautiful form provided by the Merrymount Press of Boston.

....In his *Brushwood Boy* Mr. Kipling handled the subject of an impressionable young Englishman's sentimental visions too well for it to be attempted again by a less practised hand. Mr. Richard Pryce's *Christopher* (Houghton; \$1.35) is too femininely self-conscious and subjective to hold our interest while the hero pursues his pure white vision lady who, for the sake of climax, turns out to be the scarlet one of the scriptures.

....*American-Japanese Relations*, by Kiyoshi K. Kawakami, is the best account of Japan in Korea and Manchuria and the Japanese attitude toward the United States available in English. While the author's facts as given are entirely trustworthy, the tone of his volume is decidedly pro-Japanese. The book, however, is an invaluable contribution to the discussion of the Far Eastern problem and is to be heartily recommended. (Revell; \$2.)

....The title aptly chosen for the volume containing the Noble Lectures delivered last year by Dr. Wilfred T. Grenfell, is *The Adventure of Life* (Houghton Mifflin Co.; \$1.10). In his usual straightforward style, enlivened by personal anecdotes and illustrations, Dr. Grenfell defends with convincing force the reasonableness and value of the Christian faith on the basis of his own physical, mental and spiritual experiences. The candor of the book is equal to its sincerity and devotion.

....The first number of a new monthly periodical, *The New Drama*, comes to us from Richard G. Badger & Co., of Boston (20 cents). A noticeable feature is the absence of advertising. Notes on the Boston Toy Theater, on the Drama League, the American Drama Society, the Trend Toward the Civic Theater, the Playgoer, the performance of *Pelléas et Mélisande* in Boston, and the Irish players in Philadelphia, fill the sixteen pages of this little publication.

....From G. Schirmer, the New York music publishers (Boston: The Boston Music Co.), we receive the seventeenth volume in the Golden Treasury of Music, *An Anthology of Modern French Song* (cloth, \$2). The volume is most attractive in every respect, and the contents are no less enticing than the physical properties of the anthology. The fact that the compositions of the twenty-one musicians represented do not appear consecutively

but are sprinkled thru the book without rime or reason is at times exasperating, and one remarks the fact that Chaminade and Hahn are passed over, while Bizet and Massenet have but one song apiece. These are our only objections: we could have spared enough Fauré and Debussy to admit work of the composers named. Otherwise the anthology admirably represents the orientation of French music during the second half of the nineteenth century, from César Franck to Guillaume Lekeu.

...Mr. Clarence Meily uses the title of his little book on *Puritanism* (Kerr; 50 cents) as a catchword to cover the whole "bourgeois economy" and the moral and religious sanctions that go with it. This "Puritan system" he declares is now decadent and should be torn down that a system favorable to the proletariat may be erected in its place. To this end Mr. Meily's sharp criticisms, often ill-founded and unfair, are largely directed. The volume illustrates well the tendency of an absorbing idea to distort one's whole intellectual outlook.

....A book *About Algeria* is particularly interesting to the world at a time when the French government is adding to its territory and influence in North Africa. The book by Charles Thomas-Stanford, F. S. A., which comes to us from the John Lane Co. (pp. 306; \$1.50) is furnished, too, with a map and thirty-two illustrations from drawings by F. Dorrien Thornton, and from photographs. Both kinds of illustrations are excellent, and the account of motor travel thru France-in-Africa is gracefully written and informing.

....Gouverneur Morris probably has a different idea regarding the poor sales which usually befall any collection of short stories. It is his third volume of that character (Scribner; \$1.25), containing the usual assortment of slight love tale, with flimsy situations and now and then darts of social cynicism. The title story of the book is a trivial conceit apropos of a singing voice. In a versified dedication, Mr. Morris calls his efforts "Bread-and-Butter stories." Can we say more?

....Abdul Hamid, last of the old time Sultans of Turkey, went into retirement before the "Young Turks"—we all remember how and why. Abdul is the "Red Sultan" of Mr. S. V. Bedickian's new book of verse—*The Red Sultan's Soliloquy* (Sherman, French & Co., Boston; \$2). In rather Lombardic rhymes the Sultan in his enforced retirement gives vent to his emotions. The author takes his camera round with him and the reader is not sorry

to let his eye dwell on the pictures of Turkish dignitaries and revolutionists while the Sultan chants.

...Miss Anna Chapin Ray's new novel, *The Brentons* (Little; \$1.25), deserves a high place in spring fiction. She has achieved a dramatic psychology in the development of her characters which proves extremely interesting in spite of the men in her book, who more than often speak with the tongues and feel with the emotions of women. A young rector who takes his theological doubts too seriously and his wife who takes herself too seriously are the chief figures in a group of highly specialized personalities.

...The supreme value of Paul as an interpreter of Christian experience and formulator of Christian thought is emphasized by Principal Alfred E. Garvie in his *Studies of Paul and His Gospel* (Doran; \$1.50). So fully and effectively did Paul enter into the mind of Christ that, according to Principal Garvie, his life work might rightly be regarded as "a continuation of the ministry of Jesus," and Paul's Gospel was not a development, but in all essentials a constant factor in the apostle's experience and thought.

....In issuing the twelfth and concluding volume of the *Schaff-Herzog Encyclopedia of Religious Knowledge*, the Funk & Wagnalls Company have concluded one of their great undertakings, and have conferred a great benefit on the religious public. The editors, Dr. Samuel Macauley Jackson and Prof. George W. Gilmore, are to be congratulated on their success in gathering an enormous mass of doctrinal, historical, ecclesiastical and biographical material provided by a multitude of most competent scholars, American and foreign. The present volume does not lack important titles, such as "Tribal Mysteries," "Trinity," "Union," "Unitarians," "Universalists," "United Brethren," "Vatican Council," "Virgin Bath," "Waldenses," "Westminster Standards," "Women's Work," "Wyclif," "Young People's Societies," "Yahweh," "Zoroaster" and "Zwingli." The work should be in the reach of every biblical and religious scholar. We add that it attempts to be perfectly impartial, and gives equally the more conservative and the more radical views on disputed questions.

...*The Sentence of Silence* (Moffat; \$1.35) is another of Reginald Wright Kauffman's novels of the moment. As its title implies, it deals with that reticence which keeps children from being taught the important truths of life, and the consequences which must follow mistaken innocence. There is in it sentiment,

a goodly amount of philosophy, and a considerable show of seriousness. The novel is commonplace, tho this journalist must be given credit for having a sincere social vision. "The House of Bondage" possessed commendable fervor. The scope of *The Sentence of Silence* is seen in the biblical quotation on the title page, "They peradventure are seeking God"; its intention is measured by the introductory note and the dedication, "To my wife . . . and to all other women"; its attitude is fairly exprest by the closing words of the hero's wife, in answer to his "What have you *been*?" "I thought you knew," she was saying; "I told you; I thought you understood. What have I been? Nothing that you've not been. What right have *you* to ask?" In handling his social problems, Mr. Kauffman is old-fashioned and melodramatic; he has none of the force of Brieux.

....Portolan Charts, their origin and characteristics, with a descriptive list of those belonging to the Hispanic Society of America, by Edward Luther Stevenson, Ph.D., New York, Publications of the Hispanic Society of America, Number 92, 1911. \$1.75. The portolan charts illustrate the fact that the "practical" man, working by rule of thumb, may be a scientist without knowing it. In the later Middle Ages, when scientific geographers were elaborating cosmographies uncontaminated by observation and founded upon the statements of the Old Testament, crude seamen were sailing the Mediterranean, and marking on parchment sheets the facts of use to them in their voyages. They were indicating ports, shoals, harbors, and distances with an accuracy remarkable in a day when instruments for astronomical observation were lacking. But their work forced accuracy upon them, for the inaccurate chart might lead to shipwreck. For the collector, these charts have had a fascination in their beauty of drawing and their artistic coloring. The largest group in America numbers thirty-two, which belong to the Hispanic Society, and are here described in detail. Dr. Stevenson's text is clear and scholarly.

....The first number of a monthly review published in French (soon there will be an edition in English), bears the title *La Vie Internationale* and as its sub-title "A Monthly Review of International Ideas, Facts and Organisms." There exist, say the editors, national reviews which devote articles and editorial sections to the great facts of international development, economic, social and political, as well as international reviews devoted to the study of the world in such limited fields as international law, the peace movement, the

multiple products of the sciences, commerce, industry, statistics and sociology.

"No review has till now envisaged in its totality the movements in international ideas, facts and organisms; no review has disengaged from this movement what there is in international society of the organic and the constructive. It is to this task that the new review will be entirely consecrated. . . . To universalize ideas, methods, technics and to cause the peoples to profit by the progress accomplished in all places, to facilitate relations between individuals and collectivities, to dissipate the misunderstandings and errors which breed hatreds and rancours."

Here is a part of the program of *La Vie Internationale*. In its first issue we find articles by Senator Lafontaine and M. Otlet on international life and its effort for organization, a study of the national characteristics of Great Britain and Germany by Viscount Haldane, an essay by M. Lange on co-ordination and co-operation in the domain of the international peace movement, various book reviews, editorial notes, reports of international meetings, etc. The price of subscription to the review for one year is four dollars and the address of the publishers, 3 bis, rue de la Régence, Brussels.

Pebbles

PRESIDENTIAL motto: One prexy in the White House is worth a thousand on the railway.—*New York Evening Mail*.

DOCTOR (to his colleague)—We arrived just in time, my friend. In a few hours more he would have got better by himself.—*Pele Mele*.

THE familiar question was reopened—How Sunday School children are to be attached to the Church, and once more the use of adhesive stamps was recommended.—*New Zealand Church News*.

MRS. COMMUTER—But how do you know what kind of people the Browns are if you have never met them?

Mrs. Mutler—I have heard their phonograph selections.—*Puck*.

A SETTLEMENT worker in one of the congested negro quarters of Washington in distributing flower-seeds for the little house-plots gave in one house some poppy seeds. The next day a little girl came to her and said, "I want some puppy dogs planted in my garden, too."

FIVE-YEAR-OLD Margaret was the guest at dinner at a neighbor's one day, and before beginning to eat the family one by one said grace.

Margaret looked on in wonder and finally asked:

"What are you doing?"

"We are thanking the Lord for giving us this bread to eat," said Mrs. Wilder. "Don't you give thanks?"

"Why, no," answered Margaret; "we buy our bread at the store."—*Harper's Monthly*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

How a King Died

KING FREDERICK CHRISTIAN of Denmark lived the simple, unostentatious life of a private gentleman, and he died unknown, unrecognized, by a stroke of apoplexy, in a public square of Hamburg, as a beggar might die, and his body was taken to the morgue to await recognition. So in life and in death he allied himself to the common people, putting on no claim of dignity or show. The story is told that when he was yet Crown Prince, and the Czar of Russia was visiting Copenhagen, the three—the old King, his son Frederick, and the Czar—took a walk together some miles into the country, and on their return were picked up by a farmer in his wagon, who did not suspect their rank and with whom they talked most familiarly. After awhile said the old King, "Do you know who I am? I am King Christian. And do you know who this is?" pointing to his son; "this is Prince Frederick. And do you know who this is? This is the Czar of Russia." The countryman grunted out, "And do you know who I am? I am the Emperor of China." The royalties who married into

the house of Denmark, in their visits to its simple court loved the chance to throw off the pomps and restraint of formal style and live for a while a plain, natural life.

So the family life of the palace at Copenhagen was the happiest enjoyed by any of the royal families of Europe. Frederick and his father Christian loved to walk about alone or with a companion unrecognized. His sister Alexandra, Queen of England and Empress of India, made her own frocks when a girl. She did not really need to, but she was trained to economy, for the King has a yearly civil list allowed him of less than \$300,000, which has to carry the cost of support and grants and pensions, and would be a bagatelle in the courts to which King Frederick's sisters went as Empresses, at London and St. Petersburg.

Denmark is a small but happy and prosperous country, with a population of less than two and a half millions, about that of Chicago, less than that of New Jersey. The King of Denmark has less real power than the Governor of New Jersey or the Mayor of Chicago, but he has vastly more social prestige, as things go in this ridiculous world of ours. Greece could not choose a king from among American mayors or governors, nor could it even choose the son of a President, but it could crown a younger son of the King of Denmark. The King of England could not marry his son or daughter into the family of the President of France, but he could into that of the pettiest realm of Europe. So much difference does heredity make. King Frederick had a lineage. He was son of King Christian, and he successor, by marriage, of Frederick, and he of Christian, and he of Frederick again, and so alternately back to 1448, when the House of Oldenburg began with Christian I. Age gives honor to the line. To be sure, kingship is obsolescent, but conservatism still gilds it with glory even after its value is past. Such kings as Christian and Frederick give it lease of life, even as Leopold of Belgium endangered the institution.

Men wonder why Denmark and the two Scandinavian kingdoms do not unite in a military league for their own pro-

tection. They have suffered from strong, greedy neighbors. Norway has lost Finland and Denmark has lost Schleswig-Holstein. But they probably do better to remain apart, and save the expense of heavy armaments. The day of such rapacity among kindred peoples is passing by, and the economies of peace can probably be trusted for the safety and welfare of the people in these better days.

So the King of Denmark, brother of the Queen of England, and of the Czarina of Russia, and the King of Greece, fell dead all alone in a public square, and the police took his body to the public morgue and laid it beside those of strangers and beggars. And why not? Death strips off all false dignities. Under our clothes we are one common humanity. The democratic King of Denmark knew it, and lived it, and died it. It is no dishonor to have lived and died just a common man, if a good man, such as was he.

Bishops

THE old self-abnegation, "*Nolo episcopari*," does not seem to have much vogue in the episcopal elections just now going on in the various Methodist denominations. Dr. J. M. Buckley, editor of *The Christian Advocate*, has the good sense to repeat the Latin phrase above quoted, and has always refused to stand for the office of bishop; and so for forty-four years he has attended the quadrennial General Conferences, free of ambition except to lead and serve in the ranks. The other day, at the General Conference in Minneapolis, a member moved that the election of secretaries and editors take place before those of bishops, and the proposition was laughed off the floor; for everybody knew that to elect these officials first would exclude them from being made bishops, and it is to these secretaries and editors that one looks to first in seeking for bishop timber. You can't choose men for these offices until the bishops have been chosen and the vacancies thus created are noted. Bishops serve for life or incapacity because of age, while editors and secretaries hold office for only a term of four years. They are quite willing to go

higher. It is perfectly well understood that this rivalry for the office of bishop is the one thing that makes Methodist ears to tingle. Many are the stories told of logrolling and canvassing, of ambitions satisfied or thwarted, of disappointment and tears. It seems to be understood that he that getteth the office of a bishop getteth a good thing. But the scheming ambition for it is not a good thing for the Church.

The evil of ecclesiastical politics in pursuit of the bishopric is magnified because it is a national and not a local office. The bishop is elected by the General Conference of the whole Church, just as the President of the United States is elected by the whole nation. The nation-wide canvass and nation-wide authority multiplies the evil and scandal, where scandal there is, just as the nation-wide political contest now going on to select our President kindles flame in the language of the rival combatants. There is less of such evil of office-seeking in the Protestant Episcopal Church when it chooses its bishops than there is among the Methodists, for its election of bishops is local; the choice of bishops being made in each local diocese and for its limited territory; and yet even so an election to a vacant see is often deadlocked for weeks by the difficulty of finding a man on whom the clergy and laity can both agree. Were there archbishops or a Patriarch to be chosen, the struggle for the honor might create such soreness of heart as comes after every election of bishops in the Methodist Episcopal Church.

An illustration of the unrestrained bitterness which is apt to be aroused by the election of bishops is seen in the African Methodist Episcopal Church, whose General Conference is now in session. These brethren are not as restrained as their white brethren, but they are quite as ready to show their desire to get "a good thing." They met in a church that might contain eight hundred, and two thousand squeezed in. But the excitement over the election of bishops grew so hot that it created a riot, and they had to call in the secular arm in the person of a white policeman, and he brought quiet and told them they had

better adjourn to the biggest public hall in the city, which they did; and they will probably elect twice as many bishops as they need, so as to satisfy the claimants and their friends. Probably there is as much partisanship and heat in the white as in the negro canvass, but the participants have learned better to conceal or control their righteous zeal. Just now those denominations may congratulate themselves that do not have bishops to elect, and that can convene with no life-long prizes to distribute. Why should not bishops be chosen, if chosen at all, for only four years, as we choose our President, and as the United Brethren choose their bishops? We suppose because such bishops would lack in dignity if serving no longer than presiding elders; but what is dignity worth anyhow?

Primary Campaign Funds

SENATOR LA FOLLETTE published last week the contributions which had been made to his campaign fund. They were as follows:

Charles R. Crane, of Chicago.....	\$20,000
Gifford Pinchot, of Washington.....	10,000
Amos R. E. Pinchot, of New York....	10,000
William Kent, of California.....	10,000
Alfred B. Baker, of Chicago.....	2,000
William Flinn, of Pittsburgh.....	1,000
Rudolph Spreckels, of California.....	500

\$53,500

These sums were given in the early stages of the Senator's canvass and before Mr. Roosevelt announced his own candidacy. After that announcement all, we think, of these contributors became supporters of Mr. Roosevelt. How much they have contributed to the latter's fund we do not know, but Mr. Flinn gave \$22,700 in Pittsburgh alone, and the Pinchot brothers were generous in their gifts for the primaries in New York County. Mr. Crane, it may be remembered, was appointed Ambassador to China and recalled before he could sail from San Francisco. He dislikes the Taft Administration. When he published his short list, Mr. La Follette was campaigning in Ohio, where he expressed his belief, according to newspaper reports, that a fund of not less than \$1,000,000 had been contributed for Mr. Roosevelt's primary canvass by George W. Perkins, of the Harvester Trust;

Judge Gary, of the Steel Corporation; Daniel R. Hanna, of Ohio, and others. He said:

"I call upon Col. Roosevelt to publish a complete list of contributors to his campaign fund before I leave this State. I make affidavit to the accounts of and the donors to my campaign fund. I ask that Col. Roosevelt be equally frank with the people."

Such list should be published, not only by Mr. Roosevelt, but also by Mr. Taft and every other candidate, Republican or Democrat, now seeking delegates. Already there has been a scandalous expenditure of money for the primaries, and much more will be used. There is legal evidence as to a small part of the sum contributed. For example, we know that about \$71,000 was given by Mr. Perkins, the Messrs. Pinchot and others to promote the candidacy of Mr. Roosevelt in New York County, or nearly \$5 for every vote cast for him there; also that \$98,627 was given by friends of Mr. Roosevelt and supporters of Mr. Taft for use in Allegheny County, Pa., which includes the city of Pittsburgh. In this last named county the Roosevelt contributions were \$31,344, of which, as we have said, \$22,700 came from Mr. Flinn, who is called a municipal contractor boss, and the Taft contributions were \$67,283, Senator Oliver leading, with \$7,000, and several of the steel manufacturers being not far behind. If Mr. Roosevelt's votes in New York County cost \$5 apiece, the average cost of Mr. Taft's in Allegheny County was a little less than \$4.

These examples, and the known expenditures of the candidates' campaign bureaus, prove that the sums expended thruout the country have been very large. We find in several newspapers an estimate that about \$2,000,000 was spent in Pennsylvania for Taft and Roosevelt. Probably this is excessive. It is asserted that great sums were used in Illinois, Massachusetts and Maryland, and that the cost of campaigning in Ohio this year is without precedent. It is reported in newspapers of excellent character that money was used very freely in Baltimore, and that the pay of "workers" there rose from \$10 to \$75 per day. Bureau expenses are known to be heavy. We refer to some figures recently published, concerning Mr. Roosevelt's Washington bureau, because they are the

only ones now available. It is asserted that the postage expenses have exceeded \$70,000, and that as much more has been paid for what is called "plate" service in weekly papers. Thousands are added for express and telegraph charges, campaign speakers and a large office force. Many of these charges should be duplicated, we presume, for the Taft headquarters. And there are Democratic aspirants by whom or in whose interest much money has been spent. Neither the Clark canvass nor the Wilson canvass has been inexpensive. These gentlemen are not rich. Who supplies the money? It is used, we should remember, not in a campaign for a national election, but only in seeking nominations. And all this expenditure, all these appeals and advertisements, do not bring to the primary polls a convincing proportion of the voters. In some States the number has been about half of those who were qualified, and the average for all, we think, has not been much more than this. In Pennsylvania less than 30 per cent. of the Democrats voted.

If we are to have Presidential preference primaries thruout the land they must be safeguarded by severe legislation. Otherwise we shall see a considerable part of the electorate corrupted in the contest for nominations long before the elections. This would be no better than what are called boss-ruled conventions. The lavish expenditure of money in the interest of those who seek nominations must be subjected to restraint, and the first step should be compulsory and early publicity for contributors, contributions and expenditures. The people should know, while the contest is going on, who gives the money and how it is used. Presidential nominations must not be bought. Mr. Roosevelt should answer Mr. La Follette's demand by publishing his list. And the lists of Mr. Taft, Speaker Clark, Governor Wilson, Mr. Underwood and Governor Harmon should follow.

Referendum: Not Recall

MR. J. G. MCGUFFEY, of Cody, Wyo., in a thoughtful and good-tempered letter to the editor of THE INDEPENDENT, intimates that he cannot understand how a journal that has upheld such democratic

principles as the initiative and the referendum can support the Presidential candidacy of Mr. Taft. Mr. McGuffey says:

Did Taft not disregard the progressives in Congress and ally himself with the machine? In the Ballinger case, he again united himself with the reactionaries, and so opposed a principle, the carrying out of which is of inestimable value to the people, and which was avowedly a progressive policy. You acknowledge that his support of the tariff, when he allied himself with Aldrich, Payne and Cannon, was a blunder. New York, in its platform, denounced the initiative, referendum and recall, and supported Taft. His followers as well as opponents seem to class him as a conservative or standpatter, and I believe they are right. Mr. Taft has been untrue to those who elected him. He was certainly elected by people who believed in the Roosevelt program, independent and progressive voters.

Looking over recent issues of THE INDEPENDENT Mr. McGuffey finds that on May 18, 1911, we published an editorial on "Checks and Balances."

In this editorial you clearly and ably support the initiative, referendum and recall. You say, "It is significant that any man mixed in gutter politics . . . is invariably against the initiative, referendum and recall, not because he does not understand them, but because he does." You seem yet to support these principles, though rather indifferently compared to the warmth of your support of Taft. To advocate these ideas and support Mr. Taft seems inconsistent.

THE INDEPENDENT is opposed to some of the principles that Mr. Taft represents, and is in sympathy with others. It is heartily in accord with some of the policies of Mr. Roosevelt's "progressive" scheme and to others it is antagonistic. In this dilemma it takes the liberty to support the candidacy of Mr. Taft for various reasons, including a due recognition of Mr. Taft's personal qualities and of the many important achievements of his administration.

It is better worth while, however, to restate our position on the initiative, referendum and recall than to discuss the not very important issue of journalistic consistency. For reasons which we are glad to set down explicitly, we believe with Mr. Roosevelt in the initiative and the referendum, while, with Mr. Taft, we are opposed to the judicial recall, whether applied to the judges or to their decisions.

It is still reputable, we suppose, to maintain that ours is a government by

and for the people. If these words have any meaning, it is that the people are the ultimate law-making power, and that representative bodies are, at the best, only agents of the people. Granting that the people collectively cannot well deal with every question of legislative detail, and may wisely delegate most of their statute-making business to Congress and the State legislatures, the people assuredly are competent to determine the broad questions of general policy and to insist that any particular legislative measure in which they are at any given time greatly interested shall "go thru." This is an all-sufficient reason for the initiative and the referendum used within the limits of good sense, by which we mean within the limits of what is practical and efficient. To employ these devices for minor legislative business, as has sometimes been done in one or more Western States, is to make them ridiculous and to provoke reaction.

Statute making, however, is only one part of government. The making and revising of constitutional provisions is another part, while yet other and very different parts are administrative business and the adjudication of disputes. For administration and adjudication, the people collectively, in their capacity as voters at the polls, have little ability. These functions call for expert knowledge and training, and the people collectively are usually not good judges of expert qualifications. On this point the record of experience is so clear and convincing that if a popular vote could be taken on the question whether the generals of the army, the admirals of the navy, the Director of the Census and the Directors of the Bureau of Ethnology, the Coast Survey, and so on, should be elected by popular vote, the verdict would probably be an overwhelming negative.

It is true that most States elect judges, and with what result? With the notorious result that the decisions of the Supreme Court of the United States and of the Supreme Court of Massachusetts, made by appointive judges, are on the whole progressive, often to the point of radicalism, while the decisions of elective judges are on the whole unprogressive, or even, as in the great States of

New York and Pennsylvania, obstructive and reactionary.

On grounds of actual experience, then, we do not believe that the people collectively are sufficiently good judges of expert qualifications to choose wisely, by the direct method of election, or wisely to exercise the power of recall of experts of any kind, administrative or judicial. We believe that they are competent to choose good executives, few in number, voted for on a short ballot, in the understanding that these executives will be held accountable for the wise and upright selection of all subordinate administrative officers and of judges. If the principle of the recall is to be recognized and made use of at all, it should be as applied to chief and responsible executives.

For the constitution making and constitution revising function of government the people collectively are, in our view, the only competent body. The Constitution should not be made or altered by any class, clique or interest, nor should amendment be rendered practically impossible by cumbersomeness or costliness of method. On the other hand, amendment should not be hasty, and, above all, it should not follow, as a matter of course, upon every changing mood of popular feeling. Amendment by the so called "recall of judicial decisions" would, we believe, in less than a generation create such a tangle of inconsistencies and absurdities that it would be necessary to sweep the whole jumble away and start over. We should like to see our present cumbrous methods of constitutional amendment replaced by a simple process, the essential feature of which should be the repetition of a popular vote after a reasonable interval—say two years—of consideration, discussion and criticism.

The Later "Titanic" Disclosure

THE investigation by the British Commission is bringing out some remarkable disclosures which the American Senatorial committee failed to discover. The latter rediscovered very patent facts, which the newspapers found and could not help finding at the very beginning, such as the sad lack of lifeboats, the ab-

sence of any drill in their use, and the amazing temerity with which the vessel was driven at full speed against an iceberg in the night, and in an ice field of which the captain had full information. These facts were on the very surface of the story. Senator Smith also found out something about the enterprise of a daily newspaper in getting exclusive stories of two wireless operators, and learned that the captain of the "Carpathia" did not send by wireless any full story of the tragedy.

The English investigation has brought out some other extraordinary facts quite slighted here. One of these, the condition of the watertight compartments, we referred to last week. They were not shut. They had been opened by order of the engineer an hour after the boat struck. This amazing blunder was itself very probably responsible for the terrible loss of life. We are further told that the carpenters were at work on them till the last moment before sailing, and that they did not work well. There might as well be no watertight compartments as to have those that would not shut, or that were not shut.

Another extraordinary revelation brought out at the English investigation is the failure, the criminal failure, of the captain and officers of the "Californian" to pay attention to the signals of distress, the rockets sent up calling for help. They were seen, but no attention was paid to them. The captain of the "Californian" was informed and he went to sleep again and left nearly two thousand human beings to die. The men on watch even saw the lights on the "Titanic" and saw them disappear when she sunk, and they showed no concern. The mysterious lights reported by survivors in the boats were those of this heedless vessel, one of whose officers thought that what he saw was a tramp vessel. But are lives on a tramp vessel of no value? The rockets could have meant nothing but danger and help wanted. People don't send off fireworks just for fun on the ocean. This was no time to look for a Fourth of July. Probably the "Californian" was only about five miles away, and if its officers had done their duty every soul would have been saved.

Then there is the Sir Cosmo Edmund Duff-Gordon episode; that of the man who was saved with his wife in a boat not half full, which boat did not return, as it might, to pick up some of the people struggling and crying for help in the water when the vessel went down. One of the sailors testifies that Duff-Gordon and his wife objected to the sailors going back to rescue the drowning when they could, and the cross-examination of the others and of Duff-Gordon himself does not seem to support his denial. At any rate, it is proved and admitted that he gave them each \$25, and the sailors say they did not go back for fear their boat would be swamped. As against all the grandeur and courage on the part of passengers and officers, we have here what appears to have been the most despicable heartlessness, unworthy of a brute, not to say of an Englishman.

Of one other matter we may speak with a certain hesitation and great regret. The captain of the "Titanic" died nobly, as a British seaman should, and yet we are obliged to ask questions about his conduct which we do not like to answer. One such question is asked by Bernard Shaw and answered by him very positively. It is, Why should unbounded praise be given and no word of censure to the captain who drove the steamer pell-mell at full speed right against the iceberg when he had been warned of the proximity of ice? He would condemn very sharply the British public for its praise of the man who more than any other was responsible for this fearful disaster. Possibly the public is too tender of the man who accepted the penalty of his rashness and did not save himself; but perhaps the public will believe that he was under orders. We do not doubt he was under orders to make the utmost speed; and the head of the White Star Company was at his side and did not warn him of the danger. He was silent and gave his consent to the captain's recklessness. The captain doubtless knew what he was expected to do, and did it, and died for it.

One other question we would like to have answered. Mr. Ismay says he entered the last boat only when there was no woman to be seen on deck. But how can that be when it was well known that

Mrs. Straus remained because her husband could not go? If any man was to be saved, why should not Mrs. Straus have been put on board with her husband even before the head of the White Star Company? Here is another of the sad incidents that call for explanation.

Our Swamp Lands

THE area of the United States includes eighty millions of acres of swamp land and ten millions more that are swamp part of the year. That one-third of this territory at least can be drained and made cultivatable by the middle of the century is of deep import to a rapidly increasing population. Every large swamp contributes no small amount to the death rate of the United States, and large or small swamps and swampy places are disease breeding, being from the first pre-empted by mosquitoes. The work of reclamation would go on a great deal more rapidly if the problem were more simple, that is if it could be rid of insects and malaria.

The largest enterprise in the way of reclamation now under way is that of the Everglades in South Florida. Here are four millions of acres of land of a quality unsurpassed when you can get at it. The muck is of a depth almost unfathomable, and after drainage and aeration it will need only lime in large quantities to make it productive of all sorts of truck and fruit. Already along the edge of the Everglades there are settlements of a modest sort, conducting vegetable gardens and making tolerable headway against adverse conditions. Cabbages, beans and tomatoes are among the most successful products in these gardens, while sugar cane and corn and cotton are tested with decided success. The land is almost absolutely level, but where there is a slight rise oranges and grapefruit can be planted with good results.

This tremendous swamp, spanning two or three degrees of latitude, cannot be drained without preliminary canals that will carry the water of Lake Okechobee into the Gulf of Mexico and the Atlantic Ocean. This lake is second only to Lake Michigan in size, among all the inland lakes of the United States. To pre-

vent its overflow the water of the lake must be lowered not less than four feet. The two main canals for doing this work have been dug; and they are arranged with proper locks for holding the water at five feet depth thruout the whole year, the intention being to make a sort of Venetian highway of the canals, to carry truck to market and for light travel. Other canals are eight miles apart, and being navigable for light boats they also will be of use in carrying truck.

This, however, is purely preliminary. The swamp remains just as large as ever and as defiant of farming. The real drainage must be secured either by companies or by ultimate owners on their own account. It is estimated that this will cost not less than two dollars per acre. Meanwhile the opportunity for malarial diseases is extremely good. The fight with the mosquito will be a long one, and it cannot be assumed by town authorities or by the State. The farmer cannot live in the swamp while he is doing his work, nor can he sustain his family in the neighborhood. It is still swamp, covered with water and with mud, and peopled more or less with alligators and snakes. If he has been beguiled into the purchase of a homestead the buyer will be able in many cases to reach his property only by boat. Even the engineers have not yet been able to survey the properties into which the swamp is divided, on paper. But the farmer must get there, and he must dig the lateral ditches in some way. Many months, and in some cases years, must elapse before this preliminary work can be accomplished. The man with a farm, and a family waiting to build a house, and anxious to get crops out of his land, has the consolation that at least it cannot get away from him.

This matter would hardly be worth discussing in its particularity if already there were not thousands of acres sold to inexperienced homeseekers by land development companies—some of which at least are utterly irresponsible. It is estimated that fifty years will be taken up by preliminary work; that is, at the end of fifty years there is some prospect for these headlong purchasers entering into competition with malaria and mos-

quitoes, on thoroly drained soil. It is all well enough to advise people never to buy without seeing their purchase beforehand. This is the advice that should always be given, and should always be taken. It is incomprehensible, however, how many will not take this advice, and will throw all the savings of a whole life into a venture among strangers. A large part of humanity is still the slave of smooth words. The Florida Legislature promises to provide a law that shall to some extent hinder this befooling of the innocent. Congress also has taken up the matter, to find out if the speculators have been aided at all by suppressed reports of engineers. At any rate it is high time that this leading of caravans into swamps, both in Florida and Texas and elsewhere, should be stopped. It is impossible to apprehend the meanness, not to say the criminality, of corporations, that by suppression of facts, as well as by impossible proffers, are willing to take the meager investments of hundreds of poor people, who will have nothing returned to show but canal-drained swamps.

The National Drainage Congress, which is very soon to meet in New Orleans, will take this matter up from the proper viewpoint. It is intended to put the whole matter of swamp drainage and restoration of swamp lands under the control of a commission, of which Col. William C. Gorgas, who made the construction of the Panama Canal possible by conquering the mosquito, shall be leader. He will be asked to direct the attack on the deadly insects as a national affair. It is to be a fight between man and mosquitoes, absurd on the face of it, but deeply true, that we are no longer afraid of huge beasts, but we are desperately afraid of the smallest existing forms of life. The mosquito is leader, or one of the leaders, of an army of fungoid and insect foes of mankind. Who is to be owner and occupier of the globe? It is estimated that 250,000 persons die each year in the United States alone as the result of diseases carried by the mosquito. We have got to drain our swamps, whether we want the land or not; but the land we do need, every acre of it. It is the most fertile inheritance when we can enter into possession.

The Socialist Convention

The first of the Presidential conventions, that of the Socialists, has put in nomination Eugene V. Debs, whose persistent renomination makes him the Bryan of his party. The determined effort of the anarchistic Industrial Workers of the World to capture the party has fortunately been resisted, and the convention adopted a conservative resolution which refused to take part in any conflict between the Industrial Workers of the World and the Federation of Labor. The Socialists claim to have a million men ready to vote with them at the coming election, but this is, we think, an exaggerated number. Their total vote in 1908 was 420,000. Socialists propose in their platform to bring Heaven down to earth so as to abolish poverty, insanity, crime and child labor by abolishing personal property. They do not propose to abolish governments, but to have possession of the governments and to give the government power over a multitude of things in which men are now free to do as they please. They regard anti-trust laws, with their prosecutions, indictments and investigations, as "futile and ridiculous." Fortunately, while waiting to carry out their full principles, they are willing to join with other citizens to reduce current wrongs and evils by the current forces of courts and legislatures, and their suggestions are well worth considering, whether in Milwaukee or elsewhere.

The Lake Mohonk Arbitration Conference, which held its eighteenth session last week, was not a pessimistic gathering, despite the mournful war in progress between Italy and Turkey, and the mutilation of the great and righteous arbitration treaties with England and France by the United States Senate. On the contrary, a spirit of optimism prevailed, for evidences were manifest on all sides of the great growth of the sentiment for international peace during the past year. In the personnel of the delegates and the high quality of the addresses delivered the conference equaled any of its predecessors. It was especially fortunate in having present an unusually large number of distinguished

foreign delegates, whose chief message was to the effect that if Germany could be made to espouse the peace cause the turning point in the history of the movement would be realized. Of course, in a conference of half a hundred addresses the individual papers varied greatly in importance. We call special attention to President Butler's admirable and witty analysis of the international mind, Admiral Chadwick's discussion of peace and commerce, and Commissioner of Labor Neill's plea for a closer alliance between the peace advocates and the Socialists and labor unionists. Mr. Theodore Marburg, of Baltimore, who, tho a comparatively recent recruit, has already made himself a leader in the peace movement, took issue with Mr. William C. Dennis, formerly of the State Department, by maintaining that the arbitration treaties with England and France as amended by the Senate are still of great value and should be consummated by the President. The preamble, he argued, which binds two great moral nations to settle all their differences peaceably, the commission of inquiry with its provision for a year's delay, the fact that questions of "honor" are not excluded, and that only certain "vital interests" are excluded instead of vital interests as a category, all make the treaties a great step forward. Perhaps the most important incident of the conference was the announcement of Mr. Charles Henry Butler, the clerk of the United States Supreme Court, that the Supreme Court has just handed down a decision sustaining the constitutionality of the Dingley bill, which empowered the President to enter into certain agreements with foreign nations without a further sanction by Congress. Its constitutionality was questioned on the ground that it was a delegation of the law making power to the President. The present decision evidently confirms the right of the Senate, which was challenged in the recent debates over the peace treaties, to delegate to the President general powers to enter into agreements to arbitrate prescribed kinds of disputes whenever they arise. Mr. Albert K. Smiley, the beloved host of the conference, is now a very old man. All things considered, he has probably done more for international peace than any other Amer-

ican. We again urge, as we have done more than once before, that measures forthwith be taken to nominate him as a candidate for the Nobel Peace Prize.

The Methodists and Secretary Wilson

A very questionable action was taken by the Methodist General Conference on the subject of the honorary chairmanship of the Brewers' Congress accepted by the Secretary of Agriculture. The long preambles and resolution stated that "the President of the United States, the Secretary of Agriculture and Secretary of State" were petitioned by millions of Christian people to abstain from endorsement of the Brewers' Congress, and yet Secretary Wilson did accept the chairmanship; therefore "those in authority have forfeited all claim to the future franchise of the Christian and sober manhood of the nation." That language, fairly interpreted, instructs all Methodists not to vote for Mr. Taft because of Mr. Wilson's act. We hold that it was a most unwise act of his to give his active endorsement of the brewer's business, and it is proper that he should be rebuked for it; but while those who engineered the resolution knew what it meant, we cannot believe that those who adopted it understood that the language at the end of the lengthy document was an injunction against voting for the President of the United States mentioned at the very beginning of it. There is no known evidence that President Taft was active in this matter, or that he is any more a defender of the use of alcoholic beverages than is any other one of the Presidential candidates. It looks like political action against a candidate such as should not have been allowed to pass thru the Conference. We observe that the action is highly commended by certain agricultural papers that have condemned reciprocity with Canada.

Unusual Lynchings

We are used, too used, to the lynchings of negroes in certain States of the Union; and they have been so numerous that we do not even notice them. We almost think that the negroes are taking them as a normal condition, even as the eels get used to being skinned. But two other

sorts of lynching deserve mention. When the French brigands, Garnier and Vallot, were captured the other day near Paris, after an all night siege, and the culprits were taken out wounded, the mob fell upon them and tore off their clothes and kicked and pounded them to death. We do not like to see the American variety of justice introduced into France, and the officers of justice looking on helpless. Even prisoners surely guilty should be punished under law and not against law. Another shameful case, but not murderous, occurred the other day in San Diego, Cal. An undesirable citizen, Emma Goldman, a preacher of violence and anarchy, one of the kind who by law should not be admitted to the country, was advertised to visit and speak in San Diego, at a time when the city had been excited by feeling against the Industrial Workers of the World, the preachers of industrial violence. She was not allowed to speak, even on a subject announced as innocent enough, and her agent who accompanied her was seized, stripped and tarred and feathered, and the letters "I. W. W." were burnt, or tried to be burnt, with a lighted cigar on his back. It was illegal, unjustifiable violence; and whatever the people thought of her and him it was a disgrace to the city of San Diego.

Dr. Gladden's Appeal

It is not in the style of Dr. Washington Gladden's protest against tainted money, that in our issue this week he exposes the wild antics of certain wild preachers. In the former case he felt that he needed to smite hard blows to secure condemnation of the policy which seeks money for religious purposes from those whom he regarded as evildoers. In the case then in hand we did not agree with Dr. Gladden and thought that even supposed criminals, or those charged with financial criminality, might properly give their money for a good cause and have it accepted. In the present case Dr. Gladden very gently presents the facts and does not think it necessary to express a judgment on them. Neither do we. It would seem incredible that an evangelist, listened to by thousands, in the presence of a company of sedate

clergymen sitting mutely and stupidly and apparently in approval on the stage, could use such language. Dr. Gladden has not told us who the evangelists are who have spoken in so brutal and profane a way, and we do not care to guess. We observe that one evangelist noted for his unconventionality preached in the presence of the Methodist General Conference, but "Billy" Sunday could hardly be guilty of such ranting in the presence of such a body of men, and we trust he would not do so anywhere.

A professional baseball player, resenting taunts from a spectator, leaps the grandstand rail and punishes the offender. He is indefinitely suspended by the president of the baseball league, who points out that his action was unjustified, and that the umpire is given authority to deal with such a case. His fellow players thereupon strike, and the Senators and Representatives from the State which produced the pugnacious player send him their congratulations upon his record "as a leader of the profession." Those who have seen Ty Cobb, formerly of Georgia, but playing ball for Detroit, must admire his talent in handling the bat. Yet we wish that our Senators could find a worthier way of testifying that baseball is the national sport. Strikes may do in commerce and industry; the seamen in the British navy may "organize"; but baseball players should in no circumstances deprive this people of its favorite spectacle. And discipline is as needful on the diamond as in the classroom itself.

That three students in the Episcopal General Theological Seminary in this city should have joined in withdrawing from the Episcopal Church to study for the Catholic priesthood is another illustration of the fact that ritualistic High Churchism is closely allied to Catholicism and easily slides over into it. It makes much of the ecclesiastical side of religion, of the authority of its organization, the mystical power of its sacraments and the spiritual authority of its clergy. It highly values unbroken Episcopal succession, and is concerned to prove that no such break has occurred as the

Roman Pontiff asserts. Accordingly if the evidence for a true succession seems imperfect, the enquirer naturally turns to a Church of whose tactual continuity there can be no doubt, and in which one can find authority and need not be disturbed by doubts. Their secession need indicate no further drift than this, of which there is always danger; for the Low Church and Broad Church sections care nothing for these questions, and only the highest of the High are likely to cross the line.

The London *Nation* discusses the rivalry between Taft and Roosevelt for the next Presidency, calls it a "squalid" row, asserts the "comparative hollowness and make-believe of American politics," and concludes:

"The over-elaborating of the mere machinery of politics is of itself one of the most formidable obstacles to efficiency in American statesmanship."

That statement gives pause. Just what does it mean? Is American statesmanship inefficient? Is the machinery over-elaborated? If so, in what respect is it elaborated over that of Great Britain? Has anything occurred in this campaign, squalid as it is, worse than the speeches about Ulster heard in Parliament and on the platform by accepted leaders, which threaten sedition and war, or by bishops and clerical papers charging robbery and sacrilege, while the Chancellor of the Exchequer replies that his opponents are enriched by the robberies and sacrilege of their ancestors? There are glass houses over the sea.

Some thirty-five years ago Wesleyan University admitted women into its classes. Some twenty years ago the senior boys—we can hardly call them men—refused to admit women to their class day exercises, and this boycott of the women has been kept up since. Overcome by the opposition of the unruly boys to the admission of women, the trustees three years ago weakly yielded and consented to admit no more women, while allowing those already admitted to remain. The last of these relics of a broader policy graduate this year, and the boys, as a parting goodby, have invited them to join in the class day exercises to which they have an equal right.

We wish we were sure this belated courtesy indicates a change of heart.

Announcement is made this week of the selection of another man to an important college presidency. Professor Meiklejohn, dean of Brown University, and a graduate of it, has accepted the presidency of Amherst College. He is only forty years old, and yet has been dean of the Brown faculty for ten years,

ALEXANDER MEIKLEJOHN

The newly elected president of Amherst College

and has the highest admiration of all who have known him there. His teaching has been in logic and philosophy, and he will be a teaching president as well as an administrator. The very happy and successful administration of President Harris leaves the college in the best condition to inspire hope of a long and notable career for President Meiklejohn. He is a layman, member of a Congregational church, and has shown the power to inspire young men with confidence in him and earnestness in their views of life.

In an address at the Lake Mohonk Peace Conference last week President Butler, of Columbia University, told the story of a French revolutionary who, hearing the noise and roar of a passing crowd, cried out: "There go the people. I must follow them, for I am their leader." We may quote the following:

"As was to be expected, while the treaties were under discussion the boisterous elements of our population, those that love to talk of war and to threaten it as well as to decry peace and to poke fun at it, were heard from under *not incompetent leadership*."

His description of political discussion on the platform just now was severe but just, for it has, he says, too often "the manners of the prize-ring and the language of a lunatic asylum." And yet we are being told that the advisers of the two leaders are telling them to cease restraining themselves!

Perhaps one profit derivable from the use of the educational films which Mr. Edison plans to produce, with a view to their adoption in the classroom, will be the circumstance that the novelty and attractiveness of moving picture shows will be somewhat reduced thereby. THE INDEPENDENT has not failed to point out the many advantages of the "movies," but one of their evils is their exaggerated fascination for the child, who cannot afford to give them as much time and money as he very often does today. After seeing moving pictures of the Roman Forum and the Baths of Caracalla in his Latin class, and a representation of the surrender at Yorktown in his American history class, and pictures of cotton picking and the life of various insects and mammals in "geography" and "biology," the child will be at once more critical and less hungry for the flickering films.

At the late meeting of the executive council of the American Bankers' Association action was taken in favor of liberal appropriations for agricultural education in public schools. That is well, but the following statement, made in its support, as reported, is, however, extreme:

"The school system of today is bringing up another generation of educated loafers. More than ninety-six per cent. of all the school chil-

dren never get beyond the primary grades and yet they are taught only what is expected to aid them in preparing for higher education in our universities."

If by primary education is here meant the grades before the high school, the main subjects are reading, writing and arithmetic, which have no more relation to universities than to common life.

In a number of our States there are laws much more severe against marriages between whites and negroes than against illegitimate unions. But the German Reichstag, after several days' discussion, voted that the marriage of Germans in their African colonies with native women is valid, as against a recent government rule prohibiting mixt marriages. It was said in defense of such marriages that it was in the interest of the poorer settlers who could not import wives from Germany, whereas native women often bring a big dowry in the shape of cattle.

We cannot object to the bill past by an overwhelming vote by the House of Representatives limiting the use of injunctions by judges. The bill seems to do justice to those enjoined and to those for whose protection injunction is sought. It gives opportunity to protest against an injunction, and yet in cases of immediate danger it allows a temporary injunction, with damages, if wrongfully secured.

Think of it: in Virginia one of the mountain men has been tried and convicted of the murder of the court officers at Hillsville, while in Pennsylvania not one of the mob who burnt a negro to death can be convicted of the crime, and the prosecuting attorney has been forced to give over the attempt to secure justice. Honor to Virginia; shame to Pennsylvania!

The heaviest part of the construction of the Panama Canal is now done, and the gates to the Gatun Dam have been shut and the lake begins to fill. All that is left is to do some finishing touches, and we shall open the canal for traffic sooner than was expected. But we have not yet settled the question of tolls.

Insurance

New President of the Manhattan Life

AT the annual meeting of the board of directors of the Manhattan Life Insurance Company, Morris W. Torrey, formerly vice-president of the company, was elected president. Mr. Torrey was born in New York City on November 20, 1870, of Revolutionary stock on both sides of his family. In 1887, at the age of seventeen years, he entered the office of David Parks Fackler, the actuary, and in 1891 became his managing clerk. He resigned in 1893 to enter the actuarial department of the Union Central Life Insurance Company of Cincinnati, Ohio, of which company he became assistant actuary in 1895. In 1898 he resigned to become actuary of the Manhattan Life, and in 1905 was elected secretary as well as actuary. In 1910 he was elected vice-president. Mr. Henry B. Stokes, for twenty-two years president of the company, declined re-election. This decision of his was prompted by his desire to retire from active business and have the opportunity and time for rest and travel. Mr. Stokes will remain with the company as chairman of the board and also as a member of the executive committee. The entire business career of Mr. Stokes has been spent in the service of the Manhattan Life Insurance Company, having first entered its employ as a clerk in 1863. In 1871 he was appointed assistant secretary, in 1881 second vice-president, and in 1890 he was elected president. His term of office has been notable for the successful progress of the company's business. The Manhattan Life Insurance Company was founded in 1850.

The sixty-first annual statement, published on January 1, 1912, showed total admitted assets of \$21,983,104. The total policy reserve as computed by the New York Insurance Department was \$19,156,577, while the excess of assets over all liabilities was \$2,339,237. The amount paid to policyholders during 1911 was \$2,187,363, while the total insurance in force was \$68,630,595. Dur-

ing the sixty-one years of its existence the Manhattan Life has paid to policyholders or holds for their benefit more than \$90,000,000.

✻

YOUNG men are for more reasons than one worth especial attention from the insurance canvasser. In the first place, the young man who is persuaded to take out a small policy is, thenceforth, a "prospect" for increased insurance. He who takes out a thousand dollar policy today is he who tomorrow (that is, next year) may very well take out a larger policy, and day after tomorrow (say, in five years' time) a ten thousand dollar policy. From the young man's standpoint, the present is the time for insuring. Let him profit by his youth and by his single state, if he is single. The habit of saving (and insurance is only a long word for that, plus more saving) is a good one to form in early life, even tho cigar smoking is a habit more easily formed.

✻

FROM the annual report of Fire Commissioner Johnson it is found that during 1911 the number of fires in New York City to which the Fire Department responded was 13,865, as against 14,105 during 1910. London, with a third more population, had 4,450 fires last year. The difference in favor of London is due mainly to better building construction.

✻

SAN FRANCISCO plans for a World's Insurance Congress in 1915, the year of the Panama-Pacific International Exposition. Already the East-bound mails are heavily freighted with advertising matter and invitations to insurance men to come and enjoy themselves in the Pacific metropolis.

✻

THE Royal Indemnity Company has withdrawn its membership in the Workmen's Compensation Service and Information Bureau because the new rule of the bureau governing special ratings obstructs its free competition with older companies for liability business.

The Coffee Case

THE appeal of the Government to the courts concerning what is called the Coffee Trust appears to have been precipitated by the inquiries of the Money Trust Committee in the House, altho the work of preparation for such a suit was begun some months ago. There is no Coffee Trust in this country, but the Brazilian State of Sao Paulo, and the Brazilian Government, have for several years been striving to control the price and the output of Brazilian coffee by what is called the valorization plan. This action was due to what was regarded as overproduction in that country. Great quantities of coffee were bought and held by the Government. Money was needed, and \$75,000,000 was borrowed, the greater part of it in Europe, but \$10,000,000 of this sum was loaned by a New York syndicate composed of the National City Bank, J. P. Morgan & Co., and the First National Bank. An international committee of seven, representing the lenders and the Brazilian Government, was appointed to dispose of the coffee, and parts of the accumulated stock have been sold from time to time. The price of Rio coffee is now higher by about 100 per cent. than it was when the valorization plan was adopted. It appears to be the purpose of the Money Trust Committee to show that the loaning syndicate here was unpatriotic and hostile to the interests of American consumers of Rio coffee. The lenders will say, we presume, that they merely loaned money to a foreign government on satisfactory security, bankers in London, Paris, Berlin and Belgium loaning six times as much in the same way. As for the Government's suit, it may be observed that nearly all the defendants (the members of the supervising committee) are residents of foreign countries, two of them being Baron Bleichroder and the Vicomte des Touches, and that the 950,000 bags of coffee in New York, the sale of which by a receiver the court is asked to order, are the property of a foreign government. The suit raises some novel ques-

tions, and it will be interesting to see whether violation of the Sherman act can be shown to the satisfaction of the court.

Cost of Living

THE index number of *Bradstreet's* for May 1, designed to show the cost of living by an average of the wholesale prices of many commodities, is 9.2746, the highest reached since the averages were first computed, in 1892. Since May of last year the increase has been 9.7 per cent. Since 1896 it has been 56¾ per cent. The prices of 106 commodities are considered, and these are classified as follows: Breadstuffs, live stock, provisions and groceries, fresh and dried fruits, hides and leather, raw and manufactured textiles, metals, coal and coke, mineral and vegetable oils, naval stores, building materials, chemicals and drugs, miscellaneous. Sauerbeck's (London) index number for the same date is the highest since 1881, and the increase since 1896 has been about 40 per cent. That index number relates to 45 representative commodities.

In the House last week, the Committee on Foreign Relations reported favorably a bill authorizing the President to invite foreign governments to participate in a conference for the consideration of plans for an international investigation concerning the high cost of living, "its extent, causes, effects and possible remedies." The bill carries an appropriation of \$20,000, and one like it has been past in the Senate.

....The Laetare medal was conferred last week upon Thomas M. Mulry, president of the Emigrant Industrial Savings Bank, by the University of Notre Dame, in recognition of his humanitarian work. Cardinal Farley was chairman of the meeting, and among those who made addresses of congratulation were Robert W. DeForest, of the Charity Organization Society, and Edward Lauterbach, the latter representing the Jewish Charities of New York.

The Independent

VOL. LXXII NEW YORK, THURSDAY, MAY 30, 1912

No. 3313

Survey of the World

National Politics The closing speeches of Mr. Taft and Mr. Roosevelt in the Ohio canvass were full of bitterness. To the President's assertion that Mr. Roosevelt's leading supporter in that State was a man who had been indicted for rebating, the ex-President replied that among Mr. Taft's prominent supporters were men who had not only been indicted, but also had served terms of imprisonment. Those who had closely studied the situation expected that the result would be slightly in favor of Mr. Roosevelt, but the count showed that he had won 34 of the 42 district delegates. The 6 delegates at large have not yet been chosen, and they are claimed by each side. It is probable, however, that Mr. Roosevelt will have them, and that the President will have only 8 out of 48. Mr. Roosevelt's popular vote exceeded Mr. Taft's by about 25,000. On the Democratic side Governor Harmon had 31 district delegates and Governor Wilson 11. The 6 delegates at large will be Harmon men. Mr. Roosevelt remarked that the contest had been settled by the vote of Ohio. The President gave to the public the following statement:

"Our opponents quote from a statement of mine, made in Cleveland, that the fight in Ohio, my home State, much to my gratification, would be the decisive one and would settle the question of my nomination. This is true. I shall have at least seventeen votes from Ohio, including the delegates-at-large, for we have every assurance that we shall control the State Convention. This will constitute a clear majority in the National Convention. Indeed, in addition to the votes from Ohio, delegates elected for me from other States, of which I have been advised since my Cleveland statement, give me, at the most

conservative estimate, 570 out of the 1,078 votes in the National Convention, thirty more than the number necessary to nominate. I am going to New Jersey to take part in the coming campaign there for the same reason I went to Ohio, and such delegates as we may receive from New Jersey will thus make assurance doubly sure."

Both of the leading candidates promptly began a canvass in New Jersey. Senator La Follette made speeches there, attacking them. The condition of the country, he said, presented a problem which could not be solved by a Rough Rider or "an easy-going, amiable fat man." He had refused to be a stalking horse in this campaign, and had given his refusal to those who had offered to support him for the Presidency in 1916.

—The Republican national committee some time ago offered to Senator Root the temporary chairmanship of the convention. It was reported last week that he had decided to decline the invitation, owing to Mr. Roosevelt's opposition. On the 26th, however, he said that there was no foundation for this report; he intended to serve. Mr. Roosevelt's friends give notice that this selection will be opposed at the outset. Their candidate for the place is Senator Clapp. The rules for the committee's procedure that were in force four years ago have been adopted for this year's convention. They were used for the settlement of contests in 1908. Mr. Roosevelt continues to promise much trouble if the committee rejects those contestants who, in his judgment, are entitled to seats.

—William H. Hatfield, Jr., a lawyer of New York, wrote to Mr. Roosevelt, directing his attention to a current report, "told from coast to coast by political enemies," that he was intemperate in

the use of liquors. Mr. Roosevelt replied:

"As for that intemperance story, I hardly know whether to notice it or not. It happens that I am, as regards liquor, an exceedingly temperate man. I drink about as much as Dr. Lyman Abbott—and I say this with his permission. I never touch whiskey at all, and I have never drunk a highball or a cocktail in my life. I doubt if I drink a dozen teaspoonsful of brandy a year. It is such an infamous lie that it is a little doubtful to know what to do regarding it."

At the same time there was published an interview with Dr. Abbott, who said:

"I usually take a glass or two of light wines with my luncheon or my dinner. I never drink whiskey or brandy except at the direction of a physician, and then only for medicinal purposes. Beer I never drink in this country, but I drink it when I am in Germany. The beer in this country is inferior and does not agree with me. When Col. Roosevelt is in town he takes luncheon with me at least once a week, and he frequently has been my guest at my home. I have visited him at Oyster Bay, and also at the White House, and have had every opportunity to know and study his personal habits. The only thing which Col. Roosevelt drinks to excess is milk. He sometimes takes as many as four or five glasses of milk at a single meal. The story of his intemperance is a peculiarly preposterous and malicious slander, and I would be glad to have you say so on my authority."

—Mr. Bryan, on the 22d, addressing the Methodist Conference in Minneapolis, said that while he expected to devote the remainder of his life to politics, he did not want his audience to believe that he was now, or ever expected to be, a candidate. "I can do more," he added, "by remaining in politics as a private citizen."—The canvass on the Democratic side has been going on quietly, with Mr. Clark and Governor Wilson leading.

Congress Majority and minority reports in the Lorimer case were submitted last week in the Senate by the special committee which has made an investigation. Five Senators—Messrs. Dillingham, Gamble and Jones, Republicans, and Fletcher and Johnston, Democrats, say that "all the rules of law, judicial procedure and justice require that the Senate's former judgment in Senator Lorimer's favor be regarded as final and conclusive"; and that in this additional investigation no new and substantial evidence has been produced.

The minority, composed of Messrs. Kern and Lea, Democrats, and Kenyon, Republican, assert that the new evidence is "broader and more far-reaching" than that which preceded it, and that it proves that at least ten of the votes cast for Lorimer were procured by corruption, making his election invalid. It is understood that a majority of the Senators are in favor of ousting him. Vice-President Sherman visited him in Chicago last week and urged him, it is said, to resign.—It is still predicted that the passage of the House tariff bills in the Senate will be permitted by Republicans, who expect that they will be vetoed.—The Dillingham immigration bill has been tabled by the House committee, and friends of it say that no final action will be taken at this session.—The naval appropriation bill pending in the House makes no provision for new battleships. It is expected that provision for two will be made in the Senate, and some predict that in conference there will be an agreement for one, in accordance with the decision of another Democratic caucus soon to be held.—A conference agreement on the army bill approves an amendment providing that, after March 5, 1913, no one shall be eligible for the office of Chief of Staff who has not served ten years in the line below the grade of brigadier-general. It is understood that this is aimed at Gen. Leonard Wood. The adoption of it will be opposed.—The Louisiana Legislature has elected two Senators. Congressman Joseph E. Ransdell will succeed Senator Foster in 1913, and Congressman Robert F. Broussard will take the seat of Senator Thornton two years later.—The Massachusetts Senate (by unanimous vote) has followed the House in approving the constitutional amendment for direct election of Senators.

The House last week ignored the recommendations of its committee and; by a vote of 147 to 26, amended the committee's Panama Canal bill by providing that United States vessels in the coastwise trade should pay no tolls. By a vote of 91 to 24 it refused even to require such vessels to pay the

actual cost of locking. The provision forbidding railroad companies to own or control steamship lines on routes naturally competing with the railroad lines was retained, a large majority supporting it. This prohibition affects other waterways as well as the canal, and is applicable to steamships moving between New York and Boston. Mr. Lane, of the Interstate Commerce Commission, says it affects steamships owned by the Canadian railroad companies and in service on the great lakes, as well as any so owned that may seek to use the canal. The chairman of the committee which reported the bill is not in agreement with him about this. The general charge for passage (coastwise ships excepted) must not exceed \$1.25 per ton. As amended, the bill was passed by a vote of 206 to 61. It is said that a majority of the members of the Senate committee desire to exempt coastwise ships. But many Senators hold that such exemption would be a violation of the Hay-Pauncefote treaty.

Labor Questions Daniel Willard and P. H. Morrissey, the two arbitrators chosen to consider the railroad engineers' demand, have not been able to agree upon the five additional arbitrators, and it may be that these will be appointed (according to the provisions of the agreement) by Chief Justice White, Judge Knapp, and Labor Commissioner Neill.—P. J. Flannery, of Chicago, president of the International Brotherhood of Railway Freight Handlers, has ordered a general strike, in support of the strike at Chicago.—On the 22d, 170,000 anthracite coal miners resumed work under the new agreement, after they had been idle for 44 working days. Because of the wage increase, 25 cents a ton was added to the price of coal.—Unless the landlords of the large hotels and restaurants in New York City satisfy the demands of the waiters' union, a strike will be ordered on the 29th.—At San Diego, Cal., the prosecutor who is submitting evidence to a Federal grand jury asserts that he has proof of a conspiracy of Industrial Workers of the World to destroy the city's water works and electric lighting plant by dynamite.

Trust Cases At the end of the trial, in Cleveland last week, of the Government's suit against what is called the Wall Paper Trust, for violation of the Sherman act, the eight defendants were acquitted by the jury. They are manufacturers or wholesale merchants. One of them, Winfield A. Huppuch, has been associated in business with Governor Dix, of New York.—Arguments were made last week in the Coffee Trust suit, with respect to the temporary injunction, which the Government asks the court to make permanent. Decision was reserved. A report having been published that Secretary Knox and the Attorney General were not in agreement as to this suit, a denial has been made by the State Department. Brazil is interested, as the seized coffee is the property of the Government of Brazil or of Sao Paulo. Secretary Knox has told Brazil that he must await the decision of the court.—The Senate's committee on interstate commerce is considering pending bills for adding something to the Sherman act or for the appointment of a Trade Commission.

Revolt of Negroes in Cuba There were rumors on the 19th of a negro uprising in Cuba. Several arrests were made, and the Government sought in vain to find General Estenoz and General Ivonnet, negro leaders. Two or three days later it was known that there was an uprising of an alarming character, especially in the eastern provinces. The negroes have protested against the law which forbids the making of a political party on a race or color basis. They also complained that, altho they had been a majority of the fighters in Cuba's wars for independence, a fair share of the offices had not been given to them. Some think their aim is to provoke intervention. At the end of last week it was said that 8,000 were in the field, that arms had been shipped to them from Hayti, and that negroes from Hayti had urged them to set up a negro republic in Eastern Cuba. As the wires were cut and railroad tracks had been torn up, there was little news from the eastern provinces, to which President Gomez had sent 1,200 soldiers. It was known, however, that the negroes were

looting the shops and burning canefields. The stores in El Caney were sacked. Estenoz threatened to burn the property on sugar plantations if the owners continued to grind cane. In Oriente province there was a panic, and the whites sought safety in towns. The disturbance was aggravated by the stevedores' strike, which was renewed at Havana on Saturday night, after a truce of several days. Our Government, on the 22d, sent a transport with 700 marines to Guantanamo, and a gunboat to Nipe Bay, in the vicinity of which \$30,000,000 of American capital has been invested in plantations and other property. Two days later orders were given for the assembling of nine battleships at Key West and 5,000 troops were held in readiness. Intervention was not proposed, unless Gomez should fail to subdue the rebellion. He was striving to enlarge his army by means of volunteers. On the 26th he sent a long dispatch to President Taft, protesting against intervention and expressing confidence in his ability to overcome the revolutionists. On Monday it was reported that American marines had been landed at Guantanamo. —The revolutionists in Santo Domingo were victorious last week in two battles with the Government troops. —France has protested against the new law in Hayti which forbids Syrians to do business without a license. It is aimed at the Syrians' retail shops, and will go into effect on the 31st. The Government is determined to enforce it. —Both houses of the Danish Parliament have passed the bill authorizing a company to make improvements on a large scale in the harbor of St. Thomas. The harbor is to be deepened, and there will be new wharves, docks, warehouses and shipyards. —The House at Washington has passed a bill forbidding the sale of more than 2,500 acres of the friars' lands (which were bought from the religious orders) to one corporation, or of more than 40 acres to one person. But in special cases the Legislature may change these limits, with the consent of the President.

Orozco Beaten in Mexico

At the beginning of last week Orozco was retreating to Rellano, where he had a strong position, and

General Huerta, commander of the Federal troops, was pursuing him slowly, repairing the bridges which the rebels had burned. On the 22d Huerta began an attack upon Orozco at Rellano. The battle continued for twenty-five hours, and at the end of it Orozco's army fled northward. In this battle about 10,000 men were engaged. The Federal artillery was used effectively. Huerta reported that Orozco lost 1,000 in killed and wounded. Orozco fell back to Corralitos. He still profest to expect victory, but many of his men were deserting. Huerta was then 114 miles north of Torreon. It was thought that the revolutionists' last stand would be made in or near the city of Chihuahua, from which they had set out for the city of Mexico. The men whom Orozco had sent with General Campa to turn Huerta's flank have not been successful. They were whipped twice last week by General Blanquet, southwest of Torreon. It is reported that in Velardena they destroyed property of the American Smelting and Refining Company, worth \$1,000,000. In the south there was a sharp engagement with Zapata's bandit army, within 20 miles of the capital. Two days later Zapata sent warning that he would take the city if Madero should not resign within eight days. A report in Chihuahua that Madero had been asked by Congress to resign was ridiculed by the President's friends. In Orozco's army are two Supreme Court judges of Chihuahua, fighting as common soldiers. These men, with twelve associates, were recently condemned to death because there was evidence that they had plotted against Orozco. They offered to join his army and thus to prove their loyalty to his cause. He put them in the ranks. —Mexico has paid \$100,000 to the relatives of four Germans who were killed last year in a riot at Puebla. —The correspondence relating to Magdalena Bay was sent to Congress last week by President Taft. It shows that an American syndicate desired to sell a large tract to a Japanese company and sought the approval of our Government. Disapproval was expressed by Secretary Knox. By direction of the President, Mr. Knox has been in communication with many officers of our railroads, seeking employment for the

American engineers and conductors who recently lost their places on the roads of the Mexican National Railway.

Prison Sentences for Suffragets

Mrs. Emmalene Pankhurst, leader of the militant suffragets, and Mr. and Mrs. Pethick Lawrence, editors of *Votes for Women*, were on May 22 convicted on a conspiracy charge and sentenced to nine months' imprisonment, without hard labor. The jury recommended mercy, and the court imposed the light sentence where it might have given the defendants two years each. The defendants were also condemned to pay the costs of the trial. In his closing address to the jury the Attorney-General, Sir Rufus Isaacs, said that the prisoners had been allowed great latitude during their trial, and that they had made no attempt to controvert the Government's evidence, but had injected politics into the proceedings to befog the issue. Lord Chief Justice Coleridge said that if the prisoners had expressed contrition instead of their intention to continue to break the law, he might have given a still lighter sentence. The prisoners nearly collapsed when found guilty. Mrs. Pankhurst complained of her treatment and of the trial. Mrs. Lawrence exclaimed: "May God defend us as our cause is just!" The women in the court room cried "Shame!" and "Keep the flag flying!" and the prisoners responded, "Rather!" In the House of Commons Keir Hardie and George Lansbury, Socialists, demanded that the prisoners be transferred to the first division, where they would be treated as political prisoners, and that their sentences should be revised. Mrs. Pankhurst and the Lawrences were arrested on March 5, when the police raided the Women's Social and Political Union, at Clement's Inn, Strand. Mrs. Pankhurst has served two months in jail for window breaking. The Government introduced as evidence against the prisoners on the conspiracy charge documents and papers seized at Clement's Inn tending to show that the window breaking was part of a general campaign to force the authorities to grant the suffrage to women, and demanded conviction on the ground that the defendants, by incendiary speeches and writings,

"stirred up the excitable rank and file . . . to perpetrate organized damage and injury to the extent of many thousands of pounds upon traders and peaceful merchants of London."

Strikes and Socialism

English shipping was tied up last week by the defection of 150,000 dockers, lightermen, carmen, etc., the Transport Workers' Federation having declared a general strike. It is charged that the employers have broken an agreement with the lightermen, but the immediate cause of trouble is the employment of an individual non-union foreman. Cargoes of perishable food are rotting on the London wharves and in warehouses. The strike may become national. The price of meat has already gone up 2 cents a pound, and that of flour is likely to follow, the wholesale price having already advanced. Steamship sailings are affected. On Sunday a great mass meeting was held in Trafalgar Square, but no disorders have been reported.—Home Secretary McKenna announced in the House of Commons, on May 20, that the six months' sentence imposed on Tom Mann, the labor leader, had been commuted to two months. He also ordered the release of the editor of the *Syndicalist*, who had served two months. Many petitions had been made in favor of Mann and the editor, Guy Bowman. Enemies of the Asquith Government denounce the commutations as a surrender made for the sake of holding the votes of the 45 Labor members of Parliament. It is also regarded as a concession made to reduce the chances of a general strike.—Count Tisza, an opponent of universal suffrage, having been elected Speaker of the lower house of parliament in Hungary, the Socialist Union passed, on May 22, a resolution declaring a general strike. Rioting broke out next day in many quarters of Budapest. Practically all organized labor is on strike, except municipal employees, and the strikers attacked the police with stones after being interrupted in their wrecking of windows and street lamps. They also fired on the police from cover and wounded several officers. The latter replied with a volley which killed two rioters and wounded a dozen. The strikers also attacked a church and burned a factory. Peace was restored

at midnight, May 24-25, thru Government intervention, after more bloodshed. Troops had meanwhile replaced the police in Budapest. In recommending a return to work, Socialist leaders declared that the demonstration made had so impressed the Government that reforms could be counted on. A demand for an extension of the suffrage has been forwarded to Emperor Francis Joseph.

Anglo-German Relations Count Wolff-Metternich, the retiring German Ambassador to Great Britain, said last week:

"I retire from the post more willingly in that, as I hope and confidently believe, I hand over to my successor [Baron Marschall von Bierberstein], an easier task than that which fell to my lot. The moment is auspicious unless all signs are deceptive. The impulse for reconciliation and a peaceful neighborliness is passing thru the two great peoples, English and German.

"Here is a fruitful field for statesmanship, and it will repay the toil of the noble minds which pursue its cultivation."

Meanwhile Mr. Balfour contributes to the German monthly magazine *Nord und Sud* an exposition of the British point of view with regard to Germany and German naval aggrandizement. A British war of aggression against Germany is unthinkable, he asserts, because:

"(1) We are a commercial nation, and war is ruinous to commerce; (2) We are a political nation, and unprovoked war would shatter the strongest Government and party, and (3) We are an insular nation and our army is small, and, therefore, we should be compelled to play for very unequal stakes should Germany be our opponent in the hazardous game of war."

Without any fleet at all, Mr. Balfour continues, Germany would remain the greatest European power. Hence English uneasiness:

"The greatest military power and the second greatest naval power in the world is adding both to her army and navy. She is increasing the strategic railways which lead to the frontier of States—not merely to frontier States, which themselves possess powerful armies, but to small States, which can have no desire but to remain neutral. . . .

"She is in like manner modifying her naval arrangements so as to make her naval strength instantly effective. It is conceivable that all this may be only in order to render herself impregnable to attack. Such an object would certainly be commendable; but those efforts undergone to secure it might, to outside observers, seem in excess of any possible danger. . . .

"I do not believe that the great body of the German people wish to make an attack on their neighbors or that the German Government intends it. A war in which the armed manhood of half of Europe would take part can be no object of deliberate desire either for nations or statesmen.

"The danger lies elsewhere. It lies in the coexistence of that marvelous instrument of warfare which is the German Army and Navy with the assiduous—I had almost said the organized—advocacy of a policy which it seems impossible to reconcile with the peace of the world or the rights of nations.

"For those who accept this policy, German development means German territorial expansion. All countries which hinder, tho it be only in self-defense, the realization of this ideal are to be regarded as hostile, and war or the threat of war is deemed a natural and fitting method by which the ideal itself is to be accomplished."

There are trenchant phrases in Mr. Balfour's article, as where he writes that Germany, which has taught Europe much, can teach it still more, especially that "appetite for domination belongs to an outworn phase of patriotism, and that the furtherance of civilization must be the joint work of many peoples." Mr. Balfour's article was contributed to the German review with the idea of helping to bring the nations to an understanding; but German opinion is pessimistic after reading it.—The statement is made that Mr. Churchill's estimates for an increase in the British naval estimates, because of the new German program, will amount to nearly \$15,000,000, absorbing half of the suspended treasury surplus.—The popular subscription for the German airship fleet reached \$1,000,000 on May 24, or twice the amount of the French subscription for a like purpose.—The Hamburg-American liner "Imperator" was launched at Hamburg on May 23. This is the largest steamship in the world, 10½ feet longer than the "Titanic." The Emperor christened the ship, which is subsidized, and in time of war can be pressed into transport service.—The German Reichstag has adjourned to November 29. At the final session, May 22, the Social-Democratic leader, Georg Ledebour, referred as follows to the Kaiser's speech at Strassburg, in which he threatened to incorporate Alsace-Lorraine with Prussia:

"A people like the English would in a parallel case either have smashed the throne to fragments or have confined a monarch making such remarks in some quiet castle in the same

way as was done to the mad King of Bavaria and ex-Sultan Abul Hamid."

France On Sunday, May 12, was taken the second turn of "ballotage" in the French municipal elections. These elections are important nationally because the municipal councilors chosen share in the election of Senators. The local contests reflect the waning of the Radical or Radical-Socialist party, dominant during ten years. This party will, however, elect the next President of the Republic, early in 1913. The Radicals' loss of influence is in many places due to the Socialists' desertion. Socialists have long complained that the Radicals, tho revolutionary in their war against religion, are faithless toward labor, and are at bottom philistines and capitalists. The Moderate Republicans (stigmatized by their enemies as reactionaries) divide with full-fledged Socialism the power shorn from the Radicals. There is, however, no evidence of a popular drift toward monarchy; and the military spirit today is in no sense a spirit of jingoism. Curiously, it is a Socialist, M. Millerand, who, as Minister of War, shows a will to restore efficiency and unity of organization to the army—this after a long period of decadence.—The Minister for the Colonies has drawn up a bill for the creation of a wireless telegraph system connecting all the French colonies with Paris, at a cost of \$2,000,000, to be distributed over five years. The principal stations will be at two points in Morocco; Saint Louis, Western Africa; Martinique, the Marquesas Islands, Tahiti, Noumea; Saigon, and Ha-Noi, Indo-China; Pondicherry, India; Jibuti, Africa; Antananariva, Madagascar; Bangui, French Congo, and Timbuctoo.—On May 23 Paul Deschanel, a member of the French Academy, was elected President of the Chamber of Deputies. He succeeds the late Henri Brisson, and is fifty-six years of age. The Minister of Marine, Théophile Delcassé, had been named as a candidate for the post, which is regarded as a stepping stone to the Presidency of the republic. M. Delcassé withdrew just before the vote was taken.—The Prince of Wales embarked on the French battleship "Danton" on May 21, this being the flagship of Vice-Admiral de Lapeyrère. He spent several days aboard, witnessing the

maneuvers of the French Mediterranean fleet.—The new Paris municipal loan of \$41,000,000, bearing 3 per cent. interest, was oversubscribed eighty-two times. The loan was offered for subscription in \$60 bonds, at \$57.

The Far East Talk of "grafting" is heard at Peking, and the downfall of Premier Tang Shao-yi is looked for. He is said to have paid \$1,000,000 out of the treasury to Dr. Sun, and to have contracted and spent a Belgian loan without consulting the council. He has promised to submit his accounts and a budget. His cabinet promises the introduction of trial by jury; military and naval reorganization; a general system of education, reforms in taxation; an income tax, and the establishment of a national bank.—An attempt on the life of President Yuan was made by Chang Ping-lin, a disappointed office seeker, on May 23.—The meetings at London of bankers representing the United States, Great Britain, Germany, France, Russia and Japan, to fix the terms of the Chinese loan, were suspended on May 16, as the Russian proposals were unsatisfactory to the other Powers, except Japan. Austria also is said to desire a share of the \$300,000,000 loan. If all goes well \$50,000,000 is to be advanced before November 1, the expenditures to be made under the joint supervision of foreign and Chinese auditors. Officials of the United States State Department maintain that the prospects of the loan being made are excellent.—The situation at Wu-chang, where the soldiers are reported to be without pay and rations, is said to be grave.—The general election returns in Japan show that the Seiyukai Government party will have a majority of 203 in the new House of Representatives, composed of 355 members.—The battleship-cruiser "Kongo," of the Japanese navy, was launched at Barrow-on-Furness, England, simultaneously with the launching of the American battleship "Texas" at Newport News. The speed of the new Japanese vessel is estimated at 30 knots, against 21 knots for the "Texas." The "Kongo" is a turbine of 70,000 horse power, and will burn either coal or oil. She will have cost \$12,500,000.

The People's Institute

BY JOHN COLLIER

[The appointment of Mr. Howe as the director of the 'People's Institute of this city, already noted in our editorial columns, offers a good occasion to sum up the remarkable work of this unique institution and call the attention of other cities to the good that may be expected to follow if they should create People's Institutes. Mr. Collier has been a staff member of the Institute for several years and no one is more familiar with its work than he.—EDITOR.]

THE People's Institute of New York, at the close of its fifteenth year, is beginning a new period under the leadership of Frederic C. Howe. The name "People's Institute" is somewhat intangibly familiar to millions of people. Frederic C. Howe is known as the author of an unusual series of books on progressive democracy, as a pioneer publicist of the insurgent movement in politics and as a co-worker of the late Tom Johnson in Cleveland. The Institute, founded by the late Charles Sprague Smith, and nurtured by him for

twelve years, has survived his death and continued with undiminished variety the work he created.

Prof. Sprague Smith, scholar in forgotten languages, head of the Comparative Literature Department of Columbia University, entered public affairs at forty years of age. He was impressed with the inadequacy of purely political organization, as it existed in America fifteen years ago, to meet the local problems of city government or to provide organized expression for the deeper interests of the people. He was impressed with the gulf that lay between the university and the people, and in less measure between the church and the people. Learned in many sciences, he felt that science had progressed more rapidly than had the diffusion of knowledge, and he believed that important knowledge of the world could be given to the people *en masse* only if it could be translated into some kind of collective action. Believing these things he established the People's Forum at Cooper Union, New York, and afterward the People's Institute.

The People's Forum was meant to give knowledge, leadership and public voice to the wage-earning masses. There were no doctrines, religious or political. A wide range of lectures and debates was provided, the unchangeable rule being that half of each meeting should be devoted to questions and discussion from the floor. The audience was free to pass resolutions, organize committees and in any way translate its majority views into action.

Cooper Union is the traditional civic forum of New York. It is located at the apex of an Italian colony of 200,000 and within the margin of a Jewish city of nearly half a million. Close around it lies a vast factory district, reaching into New Jersey and Long Island.

FREDERIC C. HOWE

Managing director of the People's Institute at New York and a well-known publicist

Here, for fifteen years, more than a thousand people have gathered thrice weekly for a more or less continuous debate covering all subjects of dominant public interest. The public found, at the People's Forum, both leadership and a voice of their own.

Prof. Sprague Smith was restlessly creative in his temper. His ultimate interest was human nature, as causing political changes and as shaped by industry, religion and government. With such a view it was inevitable that he would crystallize the forum movement into many pieces of practical, more or less institutional work. From the People's Forum was developed a legislative bureau which is today the one bureau in New York that digests all legislative information and reduces it to simple terms, disseminating the facts to every kind of organized citizens' body. As public crises came and went the convictions of those who gathered at Cooper Union made necessary successive campaigns directed at municipal, state and federal legislatures. The sentiment for municipal ownership was precipitated thru Cooper Union meetings, and many mass meetings were held, many delegations went to Albany on behalf of city-built and city-controlled subways. Direct legislation, industrial arbitration, tenement law measures, measures affecting parks and schools, and many other public issues were driven ahead thru the Cooper Union meetings. The temper of the people as they gathered at Cooper Union was radical from the beginning, and continues radical. But never at any one time has any special political or social doctrine claimed the forum influence for its own. No personal candidacy for office has ever been indorsed; socialism, single tax and other forward doctrines have never been even voted on, altho many applications of such progressive doctrines have been supported because of their immediate practical importance. Altho the Sunday night meetings are always ethical in their character, there has been in fifteen years only one public prayer uttered at these meetings. Occasional meetings where the debate raged high have been featured in the newspapers as indicating the rabid tendencies of the People's Forum, yet it is a fact

that this great audience of the working classes, so largely immigrant in its complexion, has been perfectly free to declare itself on any subject at any time, and yet has never given its voice to the support of a political candidacy or of a doctrinaire program.

The public with whom Prof. Sprague Smith came in contact were the indus-

CHARLES SPRAGUE SMITH

Founder of the People's Institute and for twelve years its managing director

trial workers and their families. These people dwell in tenement flats; the men labor at machine industry all day and the children are confined in the schools, which are of necessity utilitarian in their main object.

These people cannot, or will not, spend their leisure hours in their tenement homes. Prof. Sprague Smith believed that they should not spend their leisure time at home. But he had another belief, which was that a better leisure-time home should be provided. At present the saloon is the main leisure-time place

THE PEOPLE'S FORUM

A Sunday evening meeting at the People's Institute

of the adult man. The commercial dance halls, more or less iniquitous in character, alone provide hospitality for the adolescent young woman or man. Nearly 400,000 of the wage earners spend part of their leisure time daily in motion picture theaters. Politics, a man's job in New York, has its focus in or about the saloon. The child, when not in the picture theater or in widely scattered and poorly equipped small parks plays at his peril in the street. The few lecture and play centers of the public schools meet the needs of not more than 3 or 4 per cent. of the people.

Prof. Sprague Smith voiced this condition years ago and several important movements were undertaken, which have influenced the whole country.

First, and perhaps least successful, the People's Institute tried to organize a theatrical and musical public from among the wage earners, directing this public to certain chosen plays and concerts, at re-

duced rates, which could always be secured when the patronage could be guaranteed. A large committee selected, or, in a certain way, censored the productions. A special organization was developed in the public schools, and the People's Institute was able to send more than 100,000 people a year to the more educational plays and the better concerts at rates which the poorest wage earner could afford. This department of the Institute preceded by many years the formation of the drama leagues which are now familiar in America. Two years ago this department became self supporting and self governing, fusing with the Wage Earners' Theater League, which still continues its activities in New York.

A more far-reaching and typical work was the effort, which still continues, to transform the motion picture theater into an educational agency. Five years ago there were thousands of picture theaters in America—400 in New

York—with a large daily patronage, operating in the most haphazard manner and presenting a problem that had not even been investigated. The Institute placed an investigator in the field, and after a year's work there was organized a Board of Censorship, without power in law, working thru co-operative arrangements with the picture theaters. This board was created thru organizing the consumers, these being the picture theaters, the consumers agreeing to reject any picture product that had not received the approval of the censoring board. The work was done by volunteers, but the theaters themselves, being moved by enlightened self interest, undertook to meet all the clerical expenses.

A marked and instantaneous improvement took place in picture programs of New York City. As the censoring board was made up of many civic organizations and prominent people, it was easy to make their voice heard, and the official attack on motion pictures quickly transformed itself into a sane and orderly effort to improve the theaters physically and morally. After three months the film manufacturers, who supply the national market, approached the New York board and asked that the work be nationalized, agreeing on their part to meet all clerical expenses and to alter or suppress such films as the board might direct. After deliberation the New York committee decided to try the experiment, and the National Board of Motion Picture Censorship was created. The late Prof. George W. Knox, of the Union Theological Seminary and a director of the People's Institute, became chairman of the national board, and to his efforts, along with those of Prof. Sprague Smith, the almost absolute success of the experiment is due. The work on its administrative side was a department of the People's Institute.

"By your fruits shall ye be known." The co-operative censorship idea has gained increasing support thruout the country by the simple process of "making good." Motion pictures have been transformed into perhaps the cleanest and most educational form of public amusement at this time available in America, and a remarkable impetus has been given to the production of strictly educational films.

These movements, directed toward the redemption of commercialized amusement, were themselves only preparatory to the work of expanding the system of public education into the recreation field. Prof. Sprague Smith died just at the beginning of a campaign which is now in full progress, looking to the transformation of the school buildings into neighborhood club houses or social centers, with wholesome amusement, theatricals, public discussion and a definite neighborhood organization to utilize the building after the regular school hours. To meet the New York problem it was felt that experimentation was needed, and the People's Institute has recently organized and financed a citizens' committee, made up of leaders from several organizations, which has secured powers from the Board of Education to conduct experiments in a local school. Use will probably be made of both motion pictures and amateur dramatic talent; of the folk dance and social dance; civic clubs will be organized; public meetings, as free, if possible, as the Cooper Union meetings, will be inaugurated thru a steering committee chosen from the immediate vicinity. The idea of the New York Social Center Committee is that the public school should be developed as a family gathering place—a sort of enlarged family environment—where father, mother and children will be appealed to by a variety of strong, wholesome interests under a single roof, and within the educational atmosphere of the school. The social and political possibilities of this idea are too evident to require statement.

There are two kinds of public work outside the field of government, one of which is brilliant and the other profound. The first is such work as is inaugurated and maintained thru some presiding genius—thru some poetic idea or fiery personality, whose appeal can only be temporary or whose sway can only last thru a lifetime. Such institutions have been the numerous communistic colonies and many another brilliant and suggestive piece of social experimentation. The second type of organization requires genius to inaugurate, but proves itself capable of running thru the interest and leadership of the average man after the genius has passed away. The test of

greatness which can be successfully applied to the work inaugurated by Prof. Sprague Smith is the test of permanence and the capacity of rapid growth thruout the country.

Where there was one People's Forum fifteen years ago, there are now six forums in New York, organized on identical principles and co-operating constantly with the Cooper Union forum. In various parts of the country similar forums have been inaugurated. The idea of the co-operative betterment of commercial enterprise thru enlightened self-interest, which began ten years ago with the People's Institute Drama Department, has now spread into many fields of business and art, and is a force in the achievement of industrial democracy. The work of scientific local regulation of motion pictures, begun by the People's Institute as a form of voluntary effort, was taken up by the city, first thru the Commissioner of Accounts and later thru a Mayor's Commission, and the results are influencing the policy of cities thruout the country. The social center work of the institute is being carefully directed toward early self-support, and is already so organized that it could proceed independently even if the People's Institute was to drop out of existence. Prof. Sprague Smith was an intense and rich personality—a dominant force in New York public life. That he should have proved to be likewise a cautious builder of impersonal things, which, nevertheless, vitally embodied his spiritual ideas, is proof of a genius still more rare.

The coming of Frederic C. Howe to the institute brings out another significance of the movement which Prof. Sprague Smith inaugurated. He has now chosen to enter a field where the supreme test of success will be the creation of pieces of work which then move away and exist independently of their founder, perhaps forgetful of their origin. He has entered a field where intense political interest rules and yet where that interest must never be allowed to become partisan or personal. A man of strong and fundamental con-

victions he has taken the leadership of an institution whose distinction is that it has never professed a doctrine, but only an ideal of constructive democracy.

The meaning of the above facts is two-fold: first, there is being created in America a public opinion which is not confined to any dogma or party, and which cannot exhaust itself thru any single piece of public work. This public opinion is the true culture of the nation. It is a catholic public opinion and sees very far ahead; it is no more radical than it is truly conservative. Mr. Howe has elected to join a movement whose aim it is to help a little in the clearer and more earnest formulation of this basic public opinion, which is the soul of American democracy. He has chosen this work because his own interest in American democracy is, at its fountain-head, a spiritual interest.

The second meaning is this: The time has passed when democracy in America can succeed simply thru broad, smashing movements, wasteful, technically inefficient, mainly emotional in their nature. The period of efficient democracy has come. Our taxation problem has its philosophical but likewise its acutely technical side; equally so our problem of public service franchises, our problem of conservation, our problem of electoral efficiency. No longer can American municipalities continue to ignore the need for a carefully planned civic growth; the question of municipal markets requires the same businesslike force for its solution as the question of a successful department store. Even the laying of stone blocks in city pavements is a technical question which not one city in ten has tried to solve. Mr. Howe is perhaps best known to most people as a student of these detained problems of government, especially as they are illuminated by the experience of the best-governed European cities. He joins the People's Institute in order to interest the mass of the wage earning public of America's metropolis in these problems of efficient democracy.

NEW YORK CITY.

The Christian Life

BY WILLIAM DE WITT HYDE, D.D., LL.D.

PRESIDENT OF BOWDOIN COLLEGE.

AS a way of inducing the students to think about Christianity I have been in the practice of asking the members of my class in ethics to write out their individual creeds. Out of these creeds I make a composite creed, and subsequently modify it until we reach a common creed to which every member of the class can assent. A creed drawn up in this way six or eight years ago was widely copied and discussed; the general verdict being one of surprise that college students had so large a faith.

This year I did not ask for a creed, but for a definition of the Christian life. For students' minds today are not running to creeds, but straight out into life. Yet life involves convictions; and these convictions, if you please, you may call a creed. Their seventy answers I reduced to a single statement. Of course, the form and phraseology are mine. But there is not a phrase or shade of meaning in my statement that has not its warrant in some word or idea found in one or more of these students' papers. On the

other hand, with the exception of three or four negative or irrelevant statements, everything in their seventy papers has been incorporated into the composite definition. Thus the result is in substance theirs; in form only mine. The substance is much better than anything I could have written without their help; and even as to the form, the best clause in it is taken straight from the paper of a student who is intending to be a foreign medical missionary. As an indication of what the average college student really thinks about Christianity, when he can be induced to tell us what he thinks, this statement I hope will be, notwithstanding its pragmatist and sociological leanings, interesting and reassuring. Their statements were made before Christianity had been taken up as a special object of study and discussion in the class, tho the composite statement as here given was discussed with them in the class, with abundant opportunity for any member to dissent from any part of it, in case he had desired to do so.

The Christian Life

AS DEFINED BY A COLLEGE CLASS

To believe without proof God is love, and prove that faith true by finding love the life we are made for; to trust Christ at first simply as our best teacher, and let the sense of his godliness grow as his life is reproduced in us; to own men of every race, class and creed as our brothers whom we are to help Christ save from physical injury, human unkindness, social injustice, and their own wrong-thinking, wrong-feeling, wrong-doing, as the greatest evils of all; to bear cheerfully whatever sacrifice of pleasure or burden of pain this saving service involves; to struggle strenuously for better economic, political and social conditions, in the calm

assurance that God's best gifts are spiritual, to be had by us all for the asking; to do all in the modest and reverent sense of how little our best efforts add to the glorious work God's good spirit is doing thru institutions so much greater and men so much better than we—faith proved by life; trust tested in experience; love without limit; the passion to serve and to save; the willingness to suffer and to sacrifice; the striving for the temporal in the peace and power of the eternal; so they be clothed with modesty and crowned with reverence—these are The Christian Life.

Brunswick, Me.

On the Trail of the Subconscious

BY JOSEPH JASTROW, Ph.D.

[Professor Jastrow occupies the chair of psychology in the University of Wisconsin and was president of the American Psychological Association in 1900. He is the author of "Time-Relations of Mental Phenomena," "The Subconscious," "Character and Temperament," "The Qualities of Men," etc.—EDITOR.]

TO many "the subconscious" suggests an adventure in darkest psychology. It is a popular notion that we each harbor in the obscure recesses of our minds a sort of understudy, a subconscious personality, an irregular proxy, who occasionally comes forward in startling revelation, and projects the thoughts and behavior of an under-mind—according to others, of a super-mind—into the even tenor of our ways. Some propose to train this mysterious counterpart to act as a useful deputy; they persuade us to believe that if the conscious struggling self will relax and fall back on this deeper, truer, hidden insight, go into a trance or on a vacation, the self will come into its own and find the solution of perplexities knocking at the door of consciousness. The subconscious has been pictured as an elusive, superior wraith and a the most familiar of companions. The truth is that its life is neither so obscurely black nor, so transparently white as it has been painted.

So long as we are mentally alive, consciousness is variously busy; but it is not a meddlesome busybody. It goes about its many-sided affairs with a poise and a directness of purpose that is possible only thru close organization and long training. It goes where it is wanted and directs only so far and so long as is profitable. The mental economy demands a regulated superintendence, but an extremely complex and elastic one; it is ever ready to take charge, ever keeps in touch, even when seemingly off guard. When all runs smoothly, the mechanism is least conspicuous. There may be a fussy or nervous over-superintendence; a simple case thereof is that of a too intent swallowing of a pill, which sticks in the throat because there is more directive effort than such a lowly business warrants; we swallow our food subconsciously, easily and naturally. We walk

naturally, not when we think most, but when we think least about it. What bridal couple ever walked to the altar with a natural gait! How difficult to get a natural pose or expression in a photograph, to be "taken" consciously intelligent yet subconsciously unaware. Clearly our habits, disciplined and spontaneous, which form our second nature, are our real understudies; we get a direct glimpse of them when we catch the habits at work under diminished superintendence. For this we must relax toward "absent-mindedness." I find that my understudy can wind my watch when I dress for the evening, and make me wonder who did it when I try to wind it again at bedtime; that "he" can direct my steps and take me halfway to the university when my errand is in the opposite direction at the post office; that he can lay aside my eyeglasses and give me quite a chase on the trail of the subconscious to recover them. Yet the subconscious is as much of a fairy as an imp and in reality very little of either, but for commonplace purposes a fairly satisfactory and often unreliable caddy, with a caddylike sporadic psychological attack of stupidity, or inspiration, or good luck.

It is the limits of the subconscious that attract interest. Its commonplace behavior is familiar, but by the same token significant. It seems natural that I should walk subconsciously, far less so that I should talk subconsciously, almost incredible that I should write subconsciously. Such statements require analysis to extract their meaning. I keep on walking while my mind is otherwise engaged so long as the footing is easy, but pick my steps on muddy or slippery ground. I am keenly conscious of every step as I cross a trench on a narrow plank. If, instead of a shallow trench, there were a deep chasm with noisy rapids below, I might decline the venture,

tho quite convinced that the plank had not shrunk in width or lost in strength. If the gangway is provided with a railing I do not hesitate, and cross without touching it. It is a material railing, but a mental, or, if you like, a moral support. Clearly, walking may be steeped in consciousness; which means that it may be involved in considerations and anxieties. In talking, the trained mechanism is slighter, and considerations make far larger demands. To have it go on with much lowered conscious direction would involve something of a mental lapse. Here we approach the unusual, and presently the abnormal. Some persons frequently, tho briefly, talk in their sleep; many sleepers can hear and answer a question without awakening. For various reasons sleep-walking demands a more serious departure from the normal than sleep-talking; Lady Macbeth combines both in her guilty unrest. As to writing, the mechanical part is for fluent writers trained to a lowered direction. It is a common experience to find oneself copying from a page accurately, with thoughts far afield. To compose as well as write in sleep or in a trance would be strange indeed; but why?

That is another story, but one that needs to be told. If you inhale a few whiffs of ether, you become senseless and thoughtless and willless together; and when you come to, you resume feelings, thoughts and control—at first dazedly, after a while alertly. In waking from sleep you seem to pass from unconsciousness quickly to consciousness. The less traveled trail of the subconscious leads to *partial* resumption. Somnambulism is a partial or irregular resumption of one kind. In a more gradual release from the disabilities of an anesthetic, the mental functions resume irregularly; snatches of expression, violent gestures, passive dreams, imaginative constructions accompany the unfettering of the mind—at times handed over to the memory of the waking consciousness, more often fragmentary or lost. Drug intoxication makes strange invasions into the vagaries of consciousness, calls out visions, releases controls and reserves, brings forward suppressed and unsuspected resources of inner experience. Most enlightening because

subject to the play of experiment, is hypnosis, an artificial trance-like state, in which suggestion plays upon the mind's stops. From many sources of evidence we may formulate *what* it is that we resume. First of all, we resume and maintain an alert relation with the world about us; we feel, and see, and hear. Again, we fit feelings and thoughts into a continuous many-stranded coil of inner experience. In resuming we find the mental book-mark and go on to the next page with a fair knowledge of what has gone before to make us what we severally are. Finally, we do not passively resume or receive the returning self, but take the initiative, take the reins in our hands. The same old self goes on in the same old world with the same old tasks, yet ever with a touch of novelty that demands the alert consciousness of a new combination, possibly a strenuous pulling together of ourselves, subject in its success to a happy support of conscious and subconscious participation.

Partial resumptions are as properly called partial lapses; they are as characteristic in the mental obligations that are met as in those that are ignored. In absent-mindedness, distraction or "wool-gathering" the full waking privileges are slightly in abeyance; in somnambulism and hypnosis they are irregularly resumed, the direction of resumption following the clue of imposed suggestion. The hypnotized subject is for the moment asleep; but my suggestion reaches his altered consciousness so peculiarly that he acts upon it, apparently sees, hears, walks, talks, commands his muscles, his words, and his ideas; yet is unaware of his surroundings, is alienated from his normal self, when awakened knows nothing of the strange antics he has performed while hypnotized; left without suggestion shows no initiative, as to the suggestion he offers little or no resistance. Hypnosis is a selective alteration of consciousness, dissipating its unity, confining the world—like Lady Macbeth's nocturnal penance—to the imposed quest or task.

The hypnotic consciousness, like the more normal subconsciousness, is a detached consciousness, or a state of dissociation. In that state the normal consciousness is not wholly put out of com-

mission, but plays the subordinate part, not unlike the rôle of the subconscious in the normal state. I tell the hypnotized subject that he cannot write the letter *a* and ask him to copy "*Alabaster from Madagascar.*" He writes "*Albster from Mdgsr,*" but must have seen the *a*'s just as clearly to know where to omit them as where to insert them. In order to "cut" an acquaintance, the undesirable citizen must be seen and recognized. Is it all sham, then? By no means—difficult as it is to draw the line between belief and make-belief. If I give my hypnotized subject a paper dagger with instructions to thrust it into the body of the man lying on the bed, he carries thru the operation; if I give him a steel dagger and the man is of straw, he also commits murder; but if both dagger and man are genuine, what then? If he balks in the last instance, does it not indicate that some detached phase of the handicapped consciousness recognizes the unreality of weapon or victim, permits the dominant hypnotic consciousness to carry thru the project in the first two situations, checks the hand in the last? There is in this altered and imposed relation an "other consciousness" restraint. For the normal status, to a slight extent, some actions will become detached and be performed subconsciously; in hypnosis some little normality remains and imposes its limitations.

Momentary states of partial resumption of waking privileges seem explicable if they are both brief and light; if long and deep, particularly if recurrent and connected, they extend the conceptions of the mind's waywardness toward the abnormal. I speak of my dream states, but not of my dream self. Dreams are mere transient interruptions of my waking consciousness, detached, irregular, despite some measure of persistent traits and clear kinship in thought and emotion, in knowledge and desire, with the self I think I know. Somnambulists have been known to somnambulize in serial form, finding in the next séance objects hidden in the previous one, and inaccessible to the waking self. Somnambulists, fearing that they may rise and leave the room, have hidden the key of the door, only to find that the subconsciousness that directed the sleep-

ing enterprise was equal to finding it; but retorted by dropping the key into a basin of cold water, trusting to the shock to arouse the normal consciousness to its responsibilities. Here we have the house of mind divided against itself; it is only when such schemes arise that we learn how far the subconscious can usurp the throne or alternate in rule. The normal issue, despite warring factions, conflicts of impulse and conscience, the snubbed and starved and socially suppress cravings, hopes, ambitions, the dramatic potential selves that fate compels to live in imagination only—is a unity, an individual, a character; yet in each instance this is an achievement, however common, and seemingly inevitable. We all harbor the possibility of instability, or disruption, as we grow thru the psychological ages of man; the storm-and-stress of adolescence makes the issue uncertain, injects the factors of internal dissension, drives from hearth to cloister, from folly to tragedy. Knowing as we do the precarious vicissitudes of personality, what wonder that here and there the fissures dividing the dominance of mood, the direction of conduct in an unstable brain extend to an involved, persistent or recurrent chasm. Then we have "*The Dissociation of a Personality,*" far more perplexing in the fact as related by Dr. Prince* than in the "*Jekyll and Hyde*" of fiction. To find one systematized consciousness spitefully taking vengeance on its alternate, both housed in the same tenement of clay, seems a preposterous issue. Yet the feminine Hyde would entangle furniture, pictures and her body in endless yards of worsted and wake up her Jekyll counterpart to cut a way out of the maze; the robust Hyde would walk miles out of town and leave the feeble Jekyll stranded without a cent of carfare for the journey home; the crafty Hyde would induce the victimized Jekyll to tear up a ten-dollar bill under the belief that it was a worthless scrap of paper. Extreme, abnormal, is all this assuredly; yet observe that, while the common body that is swathed in yarn, the common legs that carry their owner for miles, the common hand that tears the money, offer no protest until the dis-

*Morton Prince: "*The Dissociation of a Personality.*" New York. Pp. 569. See also Joseph Jastrow: "*The Subconscious.*" Boston. Pp. 549.

tracted consciousness is in command, yet the fact that these pranks are no more serious indicate the subconscious concern of the supprest self; and no less must the subconscious presence of the perpetrator be assumed to assure of the enjoyment of her deviltries. Indeed, we can prove it so; for a neutral ground of concession was arranged, and under persuasion and threat a tribunal of arbitration established, the original personality enthroned, the patient cured.

Standing alone such a case seems chaos itself, the very mockery of psychology. Puzzling as it remains, volcanic in eruption and obliterating its tracks, it is natural withal; science recognizes no freaks. Most of all does its grotesque quality lie in this: that all these things were done, not merely dreamed or desired or concocted, but carried thru.

In the supprest field, where action is only thought and feeling, there may be unrest and dissension; but the normalized will quells the mutiny before it arises. Here lies the trail to the limitation of the subconscious; the reason why hypnosis goes so far and no further, why a trance in which altered personality plays its drama keeps to its stage and does not make a stage of the world. The player and the person are two, yet one. Yet the person loses himself in the part. Confusion is possible; the outer world of fact may seem unreal, because of the intense reality of the world of imagination, which is also the world of desire. Unstable characters express the uncertainty of conflict, the obstacles to achievement, the duplicities, conscious and subconscious. It is affectation when the pose lies near the surface, hysteria in its deeper invasion. And tho not a blessed word, hysteria is a most significant one—a great highway narrowing in its remoter issues into a tangled trail. Hysteria when mild is psychological instability; when pronounced it is a veritable jungle of psychological contradictions to be made intelligible in terms of subconscious domination. Cases of conflicting, distressed and handicapped personalities are in large measure hysterical, the symptoms indicative of a marked dissociation. The unity of mind must be gained by reconciling the subconscious

invasions with the accredited, naturalized dominion.

The depth of the invasion of the abnormal subconscious is decisive. There is a striking tale of a romantic head-clerk of Geneva, Mlle. Smith,* who on Sunday evenings held séances to imprest circles, in which as "medium," not as actor, she became the reincarnated Marie Antoinette; or, in another cycle, an Oriental princess involved in tangled intrigue; or yet more amazingly, a Martian soul, revealing thru an entranced pencil the scenery, the customs, even the language of the sister planet. It is a remarkable performance for a subconscious disciple, but a disciple of the head-clerk of a Geneva shop, nonetheless. The detail is convincing. There is a "control," an imaginary lay figure, that directs the revelations; but he knows his place and does not invade (or rarely) the shop or the home of Mlle. Smith. The subconscious is held at arm's length and does not wreck a work-a-day career, but is content with its Sunday evenings at home. But all thru the week, in the detached undercurrents, are incubated and hatched those wonderful creations, imaginative, reasoned, yet ever patterned along the lines of the normal endowment. So similarly, but without so marked detachment, problems are solved in hours of meditative brooding or in half-sleep; visions appear in revery; the subconscious resources, sympathetic to twilight, yield to persuasion when remote to an intent summons. Inspiration acquires a psychological, not a mystic meaning.

The trail that started in the open leads to a thicket, beset with the rich undergrowth of our luxuriant mentality; but it is not a blind lead. The subconscious is for the most part an humble, disciplined collaborator and facilitator, in charge of the mental machinery. Being used to turn on cranks and valves, throw in gears and keep things going, he at times turns them on without orders; or when dazed or befogged takes orders from others than his master, or, breaking thru discipline, takes a joy ride on his own account. This is all near enough to the normal to be intelligible.

*Flournoy: "From India to the Planet Mars," 1900, pp. 447.

The fundamental reason why there may come to be in unusual cases an abnormal subconscious life, is that in all cases there is necessarily a normal range of subconscious thought and action. It is easy by overlooking the valleys and the lowlands to look upon the hills as mysterious upheavals. All normal uses make possible abnormal abuses. Because it is good for man to use his mind and fear the fearful he is liable to fears that are in vain; because it is his privilege to regulate his life by reasonable beliefs, he is prone to upset his peace of mind by superstitions; because his mental endowment is complex enough to achieve and appreciate the

great things of human life, it is open to the hazard of high endeavor. The consistency, the singleness of the normal issue, sets in striking contrast the waywardness of rival personalities. True enlightenment lies along the highways, however alluring the byways of the mind. To maintain the conception of the subconscious on a profitable level, it is important to emphasize its normal kinships as well as its queer relations. Sanity of view, like sanity of life, is ever an achievement, but happily one equally within the compass of the lowly and the great.

MADISON, WIS.

The National Committee and Its Work

BY VICTOR ROSEWATER

ACTING CHAIRMAN OF THE REPUBLICAN NATIONAL CONVENTION.

THE approach of our President-nominating conventions directs attention again to the national committees of the big political parties, upon which devolves the duty of making up the temporary roll of the delegates. Where there are many seats contested, as there were four years ago and as there will be again in the Republican convention, with inevitable charges and countercharges of bias or favoritism or so-called steam-roller methods, this particular function of the committee takes on an altogether disproportionate magnitude in the public mind. In point of fact, passing on contests constitutes but an incidental part of the committee's work, which would be altogether eliminated if the party machinery in the various States and Territories were in a normal condition of stable equilibrium. But the provisional determination of the contests arouses an interest that justifies an attempt to answer the question of the how, why and wherefore of the National Committee.

It just happens that in the makeup of their national committees the two great parties follow one and the same plan. The committee comprises one member from each State, Territory and insular

possession. In numbers therefore it varies, just now counting up fifty-three, exclusive of officers, who are not necessarily members. This formation of the committee dates from the very inception of the national convention system. Copying the custom of the party organization in the separate States, the first conventions saw the need of a permanent body of duly accredited representatives authorized to act for the party in the intervals between the sittings of successive conventions which are supposed to be in possession of plenary power, such permanent body exercising delegated authority within specific and specified limitations. The immediate purpose was to take charge and conduct the campaign for the Presidential ticket just put in the field, which explains why it was originally called the National Executive Committee. It was perfectly natural, too, in those days, when States rights ideas were dominant, that the equality of the States should be recognized, and the committee made up of one member for each State chosen on recommendation of the delegates present from that State. When the Territories were accorded a voice in the nominating conventions, they likewise acquired representation in the National

Committee,' and the same is true with reference to the much later advent of the insular possessions. Whether this equal representation plan is good or bad, warranted or unwarranted, I do not venture to discuss; strong arguments can be adduced for and against it; it is the fact only that I wish here to recite.

Let it be understood, then, that the National Committee in each political party is the creature of the convention; that the convention prescribes the number of members, how they shall be chosen, what powers they may exercise, and imposes duties to perform. The charter or fundamental law of the committee, then, is to be found in the resolution, or rather in the rules, adopted by each succeeding convention. Reverting to the convention proceedings, taking the Republican Convention as the type merely because it goes more into detail, we find these salient points:

"XII—A Republican National Committee shall be appointed, to consist of one member from each State, Territory, Alaska, the District of Columbia, Porto Rico, and the Philippine Islands. The roll shall be called and the delegation from each State, Territory, Alaska, the District of Columbia, Porto Rico, and the Philippine Islands shall name, thru its chairman, a person who shall act as member of said committee. Such committee shall issue the call for the meeting of the national convention within sixty days at least before the time fixed for said meeting and delegates to the national convention shall be chosen in such manner as the national committee shall provide. An alternate delegate for each delegate to the national convention, to act in case of the absence of the delegate, shall be elected in the same manner and at the same time as the delegate is elected. Twenty days before the day set for the meeting of the national convention the credentials of each delegate and alternate shall be forwarded to the secretary of the national committee for use in making up the temporary roll of the convention. Notices of contests shall be forwarded in the same manner and within the same limits of time. And when the convention shall have assembled and the committee on credentials shall have been appointed, the secretary of the national committee shall deliver to the said committee on credentials all credentials and other papers forwarded under this rule.

"XIII—The Republican National Committee is authorized and empowered to select an executive committee to consist of nine members, who may or may not be members of the National Committee."

For several months after its creation the National Committee is actively engaged in the management of the cam-

paign. Yet here attention is devoted exclusively to the national standard-bearers, altho in close co-operation with the State Committees and other constituent party organizations, but leaving to them the untrammelled direction of matters relating to candidates within their respective jurisdictions. The National Committees do not take within their purview the election even of Congressmen or Senators, another set of committees, known as the National Congressional Committees, being charged with this special province. The actual planning and execution of campaign plans really goes to a still smaller body consisting of the chairman and his executive committee, and the other members of the committee for the most part confine their labors to their own States, for which each is usually the medium of communication and interrelation for the national body with State organization.

The Presidential election concludes the work of the National Committee as a campaign committee, unless, indeed, as in 1876, follow-up measures to insure fruition of a victory are needed, in which event the inauguration and installation of the President would be the objective point. After that the committee, as such, lapses into a state of inaction for almost four years. I do not mean to say that the members of the committee become individually *functus officio*, for they are expected to keep in touch with the party in their States, and in some instances, notably in the South, wherever official party representatives are wanting, they serve as advisers to the President in the distribution of patronage. Such consultation, however, is by courtesy, and not by right; whatever may have been done in years gone by, the committee as such does not now undertake to award patronage or exert the slightest pressure upon the candidates after they enter office.

The National Committee has its next function to perform when preparations must be made for nominating another Presidential ticket. The committee is convened about six months in advance of the customary convention time to formulate and promulgate the convention call. Generally rivalry is precipitated over the selection of the convention city and the

fixing of the convention date, the other features of the call necessarily conforming to the conditions laid down by the preceding convention. The laws recently enacted by various State legislatures designed to modify the whole convention system in some of its most vital points, and to subject Presidential nominations to primary preference votes, have introduced complicating factors which promise to force still further changes, if they do not eventually supplant the convention altogether with some new piece of nominating machinery. It is enough merely to remark that the formulation of a call avoiding conflict with these many divergent laws, and at the same time protecting the integrity of the party, is a delicate and difficult task, and becoming more so all the time. The physical arrangements for the convention are devolved upon a sub-committee, which supervises equipment of the hall, provides the badges and tickets, engages the employees, selects temporary offices, restrains the rapacity of hotel keepers, and holds the convention city to the terms of its invitation.

The preparation of the temporary roll of convention delegates is, then, the last work of the National Committee in its four years' cycle. It goes without saying that if a convention is to be an orderly assemblage for the transaction of serious business, rather than a mere mass meeting or a mob gathering, it must have a fixed membership, and that while the convention, like other representative bodies, is the final judge of the qualifications and credentials of its delegates, a temporary roll is a practical necessity and the National Committee the only tribunal provided to do the work. The contest cases are conducted in the nature of quasi-judicial trials—at least they were for the Republican convention of four years ago, and doubtless will be again this year—with opportunity to all sides to present evidence and argument. Stress is, of course, laid on compliance with the call, upon party regularity, upon free and untrammelled participation by the rank and file without race discrimination, upon charges of fraud, intimidation

or violence. It is, of course, the privilege of any defeated contestant to appeal to the convention to reverse the decision of the committee. Along this line the most important reversal on record was the seating of the previously rejected Bryan delegation in the Chicago convention of 1896, without which the "cross-of-gold" speech would never have been made to win the nomination for its orator. The common impression is that it is the political conditions prevailing in the South that alone produce the contests, but this is only partially true. Contests come up from the North, too, to plague both Democrats and Republicans. There are real contests legitimately waged, and fake contests shrewdly set up for a purpose, and some body must sift them out and pass upon them. Ordinarily the temporary roll as made up by the National Committee is accepted unchanged by the convention as the permanent roll. Four years ago the Republicans were confronted with the largest number of seats ever contested, but not a delegate declared by the National Committee to be entitled to sit was later deprived of his place, altho in quite a few cases the conflicting and contradictory evidence might have justified a finding either way.

As already indicated, the National Committee has no feature of permanency, but is succeeded every four years by a newly constituted committee. It would be desirable to have an overlapping tenure similar to that of the Senate, but this permanency is secured by retention of members for repeated terms; for here, as in other public service, experience and familiarity with the duties count for much. State and national legislation is fast encroaching on the law and customs of our political parties, but so long as we adhere to party government our National Committees, or some similarly empowered bodies, must be constituted to serve for their respective parties as the administrative authority in the nation for the larger and less compact organization, just as do the State and local committees in the State and smaller areas.

Elements of Our Population

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

THERE is no more important factor connected with the distribution of our population than that of nativity. According to the Census of 1910 our people were classified as follows:

Native white—Native parents.....	40,488,441
Native white—Foreign parents.....	18,900,663
Foreign-born white	13,343,583
Negro	9,828,204

The proportion of native whites of native parents and of negroes has decreased slightly since 1900, while the proportion of native whites of foreign parents and foreign-born whites has increased a little during the same decade. The total increase in our population from 1900 to 1910 was 21 per cent. The only element in the population which has increased more rapidly than this has been the foreign-born white, which, during this decade, increased 30.6 per cent. The increase in negroes has been the slowest of any group, amounting to only 11.3 per cent. The number of foreign-born in this country in 1910 for whom there

were more than a million representatives to each country were as follows:

Germany	2,499,200
Russia	1,706,900
Austria-Hungary	1,658,700
Scandinavia	1,250,500
Ireland	1,351,400
Italy	1,341,800
Great Britain	1,221,400
Canada	1,198,000

Germany has been in the lead for several decades, but it is surprising to find that Ireland, easily second in 1900, has been forced into fifth position, while Russia, then fourth, is now second. In the same way Great Britain, which was third in 1900, has become seventh in 1910, while Austria-Hungary has advanced from fifth position to third. Those from Austria-Hungary and Russia are the only nationalities to have gained over a million each since 1900, while those from Germany and Ireland have together lost over half a million during the same period.

John Masefield

BY MARY LAMBERTON BECKER

THE man who gave me John Masefield's "A Mainsail Haul" to read had been a deep-sea sailor and lives his life among seamen. "It's the real thing," said he, and sailors do not say that of books about the sea, except Joseph Conrad's and "Two Years Before the Mast." Yet he had never heard that Masefield had written a play.

When "The Tragedy of Nan" came up, not like an exotic, but a wild late flowering of the Elizabethan drama upon its own old soil, few who welcomed it knew that Masefield had written anything else.

When a few months ago "The Everlasting Mercy" started what seems to be a revival of English narrative verse, it may have owed to its author's previous record its chance of being published at all, but it certainly does not owe its popularity to either of the audiences that he had already gathered. Many who praised it and most of those who blamed read the name of the author for the first time on its title-page.

For it is now just ten years that John Masefield has had to do with the reading public, and all that time all it has had of him has been books and a name on their title-pages; this spring there has been a portrait by Strang, but not a line of biography, not even in "Who's Who"—only the names of his books, not all of them, and a publisher's address. It is almost as if he regretted the youthful burst of confidence in "A Mainsail Haul," where he spends two sparkling chapters in an account of how he was stranded in New York, stone broke, between voyages, in that strange wandering youth of his: when three of them lived on tobacco and an occasional egg, "and sang songs in the streets, but it came on to rain, and we were all soaked thru before the citizens had had time to get out an injunction." While he was debating whether to take himself and his library—one volume, the "Morte d'Arthur," in his pocket—to a livery stable or a can factory, he was of-

fered a job to help behind the bar in the Colonial Hotel on Sixth avenue, since torn down. Those who have learned from Arnold Bennett, as learn they may, how to run a boarding house, can add from these two chapters a knowledge of the technic of a saloon. No wonder they are quoted as autobiography, sometimes a risky thing to do; not only are you sure that Masefield has been there, but you have a vague sense that so have you. No wonder that when he now writes in the first person the experience of a prize-fighter in "The Everlasting Mercy" he adds in a note: "The persons and events described in this poem are entirely imaginary, and no reference is made or intended to any living person."

At all events he had certainly, before he settled down to being a literary worker in London, spent an adventurous youth, now on shipboard, now on this continent or on that, sensitive, recording, remembering—one of the few writers who should they meet a man from Mars could give him something like a fair answer to the question "What do you think about the world?"

Yet it was not his romances like "Captain Margaret," the more direct result of these wanderings, that made his fame. It was on the banks of the Severn that he placed his "Tragedy of Nan," among the orchards, where the high tide at harvest sweeping up the river takes the nets for miles. "They find 'em high up. Beyond Glorster. Girt golden flag-flowers over 'em. Apples of red and apples of gold. They fall into the water. The water be still there, where the apples fall." The action is all indoors, the lovely lush landscape is all in the words of the speakers, even more in their thoughts, dropped into the hearer's senses phrase by phrase, or painted to the eye of the mind, stroke by stroke. It cheapens stage painting: afterward it hardly seems possible that the play has gone on within four kitchen walls, so full are the senses of outdoor colors and odors and sounds. The color

of life itself for these peasants is drab, but for one vivid creature, Nan, daughter of a hanged man, taken in out of charity, the kind of charity a farmer's wife keeps for her husband's unrepresentable relations. But the tragedy is not in the baiting of Nan; it is that, loving and giving, she is brought to hate and to kill, to kill the sweetheart who threw her aside when he found her father's fate would interfere with his own prospects, and crawls to win her back when Crown officials coming to prove her father's innocence and bring her compensation money make her not only suitable but desirable. Told in this way it may seem a cheap enough plot. Its strange charm is in the way each character in the play is made with the fewest and simplest words, with actions of inexorable reality, to show himself for what he is at the heart. The self-revelation is effected with an art so subtle as to seem unconscious. Here, for example, are two people talking together, Nan, pure, warm, spiritual in her loving; Dick, gloating over the beauty of her hair and the thought of mulled cider "with an apple roast therein and a sod toast therein"; even capable of feeling a pure devotion, but not of paying for it with hunger or cold:

"*Dick.* My father say to me—'Mind thy innards,' he say. Very partikler about his innards, Dad were. I learned about innards from him."

"*Nan.* It be wonderful to 'ave a father to do for. To think as he knowed 'e when you were a little un. To think as perhaps he give up lots o' things so you might fare to be great in the world."

"*Dick.* My dad never give up. 'E said 'e try it once, just to try like. It never'd 'ave suit my dad."

"*Nan.* It be always 'ard for a man to give up, even for a child, they say. But a woman 'as to give up. You don't know. You never think per'aps what a woman gives up. She gives up 'er beauty and 'er peace. She gives up 'er share of joy in the world. All to bear a little one, as per'aps 'll not give 'er bread when 'er be wold."

"*Dick.* I wonder woman ever want to 'ave children. They be so beautiful avore they 'ave children. They 'ave their red cheeks so soft. And sweet lips so red's red. And their eyes bright, like stars a-zhining. And oh, such white soft 'ands. Touch one of 'em and you 'ave like shoots all down. Beau-ti-ful. Love-lee."

"*Nan.* It be a proud thing to 'ave beauty to raise love in a man."

"*Dick.* And after. I seen the same girls,

with their 'ands all rough o' washing-day, and their fingers all scarred o' stitching. And their cheeks all flagging and sunk. And lips all bit. And there they do go with the backache on 'em. Pitiful, I call it. Dragging their old raggy skirts. And the baby crying. And little Sairey fell in the yard and 'ad 'er 'air mucked. Ah! Ugh! It go to my 'eart."

"*Nan.* Ah, but that be'nt the all of love, Mr. Dick. It be 'ard to see beauty gone, and joy gone, and a light 'eart broke. But it be wonderful for to 'ave little ones. To 'ave brought life into the world. To 'ave 'ad them little live things knocking on your 'eart, all them months. And then to feed them. 'Elpless like that."

"*Dick.* They be pretty, little ones be, when they be kept clean and that."

One character does not reveal himself: it is the old fiddler, mazed since the death of his bride, talking to himself, unheeded by the others; his murmurings are the emotional ground-bass of the play's harmony. It is Gaffer and Nan that describe one to the other the oncoming of the harvest-tide, the lyrical outburst that opens the last act.

"*'Ush,'* it says. '*Ush,'* it says. '*Ush,'* it says. And ther come a girt wash of it over the rock. White. White. Like a bird. Like a swan a-gettin' up out of a pool. . . . Bright it goes. High. High up. Flashing. . . . And it wammers and it bubbles. And then it spreads. It go out like soldiers. It go out in a line. It curls. It curls. It go toppling and toppling. And on it come. . . . With a rush. With a roar. And its claws clutching at you. Out they go at the sides, the claws do. The claws of the tide."

"The Tragedy of Pompey the Great" really does what Bernard Shaw in "Cæsar and Cleopatra" tried to do—it shows how like are living beings, whether they live in our age or in the time of the Romans. Pompey, like Shaw's Cæsar, talks straightforward colloquial English, and so do the others.

"For things that go," says a woman-servant of the soldiers, "from the prison of a womb to the prison under the grass, they're very proud. . . . Your breath will be in the wind; a little noise in the night. That's what you come to, soldiers. Dust, and a noise in the trees. Dust, and the windows rattling."

Who cares whether windows rattled in Cæsar's day? Short of making them speak Latin there is nothing but to let them speak such English as will express the idea. This is of course Shaw's method as well; the difference is one of feeling. Both men realize that we and the classic Romans are much the same sort

of people, only Shaw thinks they were as small as we are, and Masfield thinks we are as great as they. This Pompey, the tragic victim of a cause the gods loved not, whose dream of empire means "equal rights and equal laws to all the world," who sees in colonies only "little bad bits of Rome planted down in the wilds," believes Cæsar an opportunist, one to whom public life is a means of self-aggrandizement and empire a market for exploitation. He "comes at a devil of a pace"; there is no knowing where to have him; he is a practical politician. "Those on my side," says Pompey, "must act like knights of the bodyguard of God." And Cato: "There are two Romes. One built of brick by hodsmen. But the Rome I serve glimmers in the uplifted heart. It is a court of the calm gods." All this sounds as modern and as ancient as Imperialism. "Nan" and "Pompey" are both tragedies of human destiny thwarted, but they both get their grandeur and their pain from the sense that they are tragedies of God's destiny deferred.

I have noticed that tho the methods of the two playwrights are dissimilar, the plays of Masfield resemble those of Synge in that they are generally disliked by the same people. That is, putting aside non-literary causes, the same people who instinctively turn from Synge turn from Masfield too. Indeed they are alike in that their poetry is generally written in prose, that their peasants act and talk according to circumstance and condition and not with an eye on any literary Cushing's Manual, and that neither has expressed, in his plays at least, any philosophy of life. In this Masfield differs from Hardy, whom his rich slow beauty of phrase most often calls to mind: if the hand of Providence is to Hardy, as some one says, a clenched fist, it is sure that he clenches his back again in the face of the brooding sky. Masfield has not reduced himself to a gesture; he is life's recorder, sometimes wistful, sometimes dispassionate, sometimes bubblingly glad. In his two sociological novels he is more wistful than glad; judged by the event he is even pessimistic, but it is the mild reflected pessimism—if such it is—of Galsworthy, whose influence is so strong in "The Street of To-Day" as almost to obscure

the characteristic Masfield color. This, however, shines vividly in "The Everlasting Mercy," of which probably more people are talking in England today than of any other poem for at least a decade.

It is the story of Saul Kane, poacher and prize-fighter, who "gets religion." Told in the first person, in a rugged line that sometimes finds its rimes and sometimes makes them, it plunges you into the prize-fight that Kane wins because the other man sprains his thumb, and the bestial, reeking orgy that celebrates it. You must, whether you will or no, see all this, hear it, smell it—and Masfield has not forgotten that the first and most distinguishing impressions of scenes like this come to one thru the nose. It is told with the ways of speech of one who, looking backward, sees that every step of that wild night was along a road laid to a great glory. He tells of the window thrown open from the sodden room where he "felt a cool wind go like grace about the sleeping market-place"; the sudden access of delirium that whirls him thru the sleeping town calling to judgment; the little sayings and doings of the day that mark the phases of his emotional state—and then midway of the night, the Quaker preaching-woman at the public-house bar looking at him with her black eyes wide, "a tall, pale woman, gray and bent," speaking of the Christ within him—"All that you are is that Christ's loss." And then she leaves him, with one last long look and the words, "He waits until you knock."

"I heard her clang the Lion door,
I marked a drink-drop roll to floor;
It took up scraps of sawdust, furry,
And crinkled on, a half-inch, blurry;
A drop from my last glass of gin;
And some one waiting to come in,
A hand upon the door-latch gropen
Knocking the man inside to open.
I know the very words I said,
They bayed like bloodhounds in my head.

'The water's going out to sea
And there's a great moon calling me;
But there's a great sun calls the moon,
And all God's bells will carol soon
For joy and glory and delight
Of some one coming home tonight.' . . .

"I did not think, I did not strive,
The deep peace burnt my me alive;
The bolted door had broken in,
I knew that I had done with sin. . . .

"O glory of the lighted mind.
How dead I'd been, how dumb, how blind
The station brook, to my new eyes,
Was babbling out of Paradise. . . .
I thought all earthly creatures knelt
From rapture of the thing I felt."

There is not a point in the story that any slum missionary cannot match from the testimony of the twice-born. Nor are the brutal scenes that begin it strange to the missions, where so many conversions are recorded as coming at precisely the point of nervous tension that Kane had reached. Most surprising of all, there are in the midst of these riots moments of such tender sweetness as show the soul waking wide-eyed and innocent within the brutal body. Any one with a keen eye and a strong stomach could describe the prize fight; to express Kane's spiritual exaltation needs spiritual sense, but

to make one descry thru the filth glimpses of the awakening soul, requires a form of genius. Such phrases suggest Blake only because Blake alone has heretofore exprest in poignant beauty the child yet living in the hearts of simple men.

Since the English publication of "The Everlasting Mercy,"* two other narrative poems† have brought his first decade to a close. It seems as if this form must be an interlude; it cannot be that he has finally forsaken the drama. If he has, his best work has been done; if not, no one knows what he may yet give the world of beauty and of power.

The Road to Yesterday

BY EMILY HUNTINGTON MILLER

WE dreamed alone, my heart and I
Of summers lost and vanished springs;
A little wind went singing by,
With breath of roses on his wings:
"Come out!" he beckoned, "come away!
I know the road to Yesterday!"

We ran together down the way,
A pleasant path of sun and shade,
We found the homestead, old and gray,
The garden where the children played
Before their feet had learned to stray
Beyond the realm of Yesterday.

The roses blossomed, white and red,
The plum-trees dropt their fragrant snow,
A joyous bird sang overhead
The very song of long ago;
And sunbeams, thru the open door,
Wove webs of gold along the floor.

But from the window one should look
With tender longing in her face—
And one, above a holy book,
Sit musing by the fireside place—
Sweet souls! that changed to food divine
Life's bitter bread, and meagre wine.

And all the empty rooms should fill
With children's voices, clear and sweet;
And on the silent stairway still
Sound the light tread of children's feet—
"O heart!" I sighed, "what need to stay?
There is no road to Yesterday!"

SOUTH PASADENA, CAL.

Pros and Cons

BY READERS OF THE INDEPENDENT

[During the last few weeks we have laid aside several hundred letters that have come to THE INDEPENDENT and this week we publish a selection from them. These letters are mostly "extracts" from longer letters, but they fairly typify the kind of praise and blame we are constantly receiving.—EDITOR.]

From the East.

I have enjoyed THE INDEPENDENT very much as it furnishes news that can be relied upon.

J. M. BAEPH.

AMERICAN MISSION, LATAKIA, SYRIA.

From the Author of "In His Steps."

I could let nearly every other paper on my table go before THE INDEPENDENT. Count me a life subscriber.

CHARLES M. SHELDON.

TOPEKA, KAN.

Both Interesting and Instructive.

I never enjoyed reading a magazine more than I have THE INDEPENDENT. I find it both interesting and instructive.

I. KRUEGER.

BUTTE, MONT.

Thanks.

Allow me to say that you grow better and better. You are keeping the vivacity of youth mingled with the maturity of years.

R. B. PEELLE.

WILMINGTON, OHIO.

"Expurgated Swedenborg."

Under this caption THE INDEPENDENT says that the Christian Church annulled certain teachings of the Old Testament. Is THE INDEPENDENT, in its infidelity, a fool or a liar?

X. Y. Z.

NEW YORK CITY.

We Thank You.

I wish to express to you my appreciation of the saneness of your editorials in the last two numbers. Particularly those which touch upon the struggle between Taft and Roosevelt.

J. J. JEWETT.

RIVERTON, WYO.

Speaking Out Straight.

It has been refreshing to note how steadily THE INDEPENDENT has dared to speak out straight on the many questionable actions of Romanism, not least being that article on the Britannica.

(Rev.) GEO. T. LEMMON.

SAND LAKE, N. Y.

The Harvey-Wilson Episode.

I have been especially pleased with your fair exposition of the Harvey Wilson affair. A personal knowledge of Mr. Harvey made me see its justice all the more clearly.

FLETCHER D. PARKER.

PROCTOR, VT.

Stupid Schurman and Shallow Judson.

In recent numbers of THE INDEPENDENT you have contributions from university presidents on Mr. Roosevelt and the third term, and as exhibition of stupidity and shallowness they surpass anything in modern literature.

BRADY HARRIS.

BELTON, MO.

Greater Than Washington, Franklin and Lincoln.

Since 1660 I and my fathers have been Americans. We have sustained the government in all her trials and tribulations. We have never seen a greater man than Theodore Roosevelt.

R. H. MAIN.

BARRY, ILL.

High Character.

No magazine which has come to my home was more welcome than THE INDEPENDENT. I appreciate its high character, its editorial opinions and its survey of the world of important things. It is a splendid publication in every way.

W. WORTHINGTON.

CHARLESTON, WASH.

From a Japanese.

As a Japanese I am very much appreciated for your remarkable efforts and influences in the Japanese-American relations and International Peace movements with Dr. Jordan and others. We need your INDEPENDENT for this propaganda, too.

S. NISHIZAKI.

PORTLAND, ORE.

The Office and the Man.

I, for one, believe you are "all off" on your attitude toward Roosevelt. If ever there was a case of the office seeking the man this is

one. The people want the return of Roosevelt; there is no doubt about that here in the Middle West.

R. LINDSEY.

YORK, NEB.

Self-Control.

In your issue of January 25 you have an article written by your representative called "More Slavery in the South." Reading this article I *almost* got angry, and with some of your other customers said, "Stop my paper," but of course I would not let my temper control me entirely.

C. GRACELEY.

LA RUE, OHIO.

Disappointed.

When, a year ago, I subscribed for THE INDEPENDENT, I expected to receive a frank, unbiased and honest review of current events. Instead, I receive a magazine with the very misleading title of "Independent," being about as diametrically opposed to independence as fire is to water.

C. NELSON.

WINDBER, PA.

Washington Was Satisfied.

I just must endorse your remarks about Roosevelt's platform. I have always admired Theodore Roosevelt, but I can never again support him for the Presidency. If Washington was satisfied there could be another chief executive found among 3,000,000 population, we can now surely find a suitable man among 90,000,000.

P. ALLEN CLOUD.

LONDON GROVE, PA.

We Are Independent.

In THE INDEPENDENT of February 8, under your article of "The Republican Candidates," a question occurred to me whether or not in a political sense THE INDEPENDENT is what its name indicates or democratic in policy. I would like very much to know in order more intelligently to understand the political comment.

E. C. RUBLE.

DRISCOLL, N. DAK.

Indispensable.

THE INDEPENDENT is the one magazine I cannot do without. It grows more indispensable with every copy I read. The review of current events is concise yet comprehensive, the special articles timely and scholarly, then come the editorials, a most thought stimulating and critical review of both.

C. L. NORQUIST.

JAMESTOWN, N. Y.

Taft and \$ Guggenheim.

Under no consideration will I vote for William Howard Taft, and that is the attitude of thousands of Republicans. The moment Taft is nominated a Democratic President is elected.

When a man allies himself with such high-waysmen as \$ Guggenheim, all decent people should turn him down hard.

J. Q. POLLARD.

LAWA, COLO.

Rooseveltian Sagacity.

I could freely and fairly praise other articles and editorials in your number of February 22—how charming is "Dr. Sun!" But I now commend "Mr. Roosevelt and the Republican Party." Rooseveltian sagacity will now be tested and, if found wanting, many thousands will welcome the chance to vote for Woodrow Wilson.

W. L. PEARSON.

WICHITA, KAN.

God Loves the Irish.

It may be your editor is an Irishman, which would explain his deliberate insult of New Englanders. The overwhelming flood of pauper foreigners has crowded the poorer native American to the wall. He, the bone and sinew of the country, is now insulted even by his own people who look down upon him from their aristocratic pedestals acquired largely by predatory wealth.

ANGLO-AMERICAN.

Simplified Spelling.

If you want to know what I don't like about your paper I will tell you, tho, of course, such things don't amount to much after all.

One thing, I don't like your spelling—you can't change the English language by edict, and the way you spell such words as through to "thru" is sort of unpleasant to read.

Another objection is that I honestly think that your paper is inclined to narrowness.

H. C. BROWNING.

NORWOOD, COLO.

The Independent as a Textbook.

THE INDEPENDENT is often of great service to me in teaching the boys of my school, which is filled with the scum of the public school. The sane editorials which THE INDEPENDENT always contains sometimes has an uplift which they sorely need. The one concerning Dr. Sun and those of the heroes of the "Titanic" had a lesson upon Christian nobility that fell upon sadly fallow, but appreciative, soil of these rough boys' hearts.

A PLEASED SUBSCRIBER.

SEATTLE, WASH.

Drawing the Line.

I have frequently disagreed with you, but this was in regard to matters concerning which men will always differ, and I never was dissatisfied with your magazine simply because its position on many matters differed from mine. However, the line is always drawn somewhere, and I am inclined to draw the line at a magazine that invites Harry Orchard to contribute to its columns and treats such a contribution seriously in an editorial.

CHARLES PERGLER.

CRESO, IA.

Justice Hughes.

Cannot some pressure be brought to bear on Charles E. Hughes to get him to permit his name to be brought before the Chicago convention? Personally, I feel that Mr. Taft's

policies are what the country needs, but Mr. Taft does not enthuse the people, does not have sufficient popularity to carry the election. The primaries here was a fight as between Roosevelt and La Follette, and the vote was not a pro-La Follette vote so much as it was an anti-Roosevelt vote. O. B. BRAINARD.

HEBRON, N. DAK.

The Goat Pastures of New York.

Some time ago THE INDEPENDENT deprecated cutting down the beautiful natural growth along the highways—golden rod, daisies, wild carrot, etc. How, now! Your farmer editor should get together or the farmer reader will lose confidence in you. Take a winter course in Cornell and come to the address below and some of us will take you around and show you what real farming is like away from the "sububs" and goat pastures of New York commuters.

HERBERT G. REED.

BERGEN, N. Y.

Taft's Judicial Qualifications.

We are tired of hearing of Mr. Taft's legal and judicial qualifications. I believe he would have done better if he had shown more backbone for his promising and less mulishness when that virtue was uncalled for.

Lawyers are in some respects the more narrow-minded professional men and I believe I am putting my finger very near the soft spot of this administration when I say that this administration has been too much an administration of lawyers.

EDWIN D. MCHOSE.

SCHUYLKILL, PA.

Socialism.

Last summer, I don't remember what dates, you published some articles on Socialism that to me seemed out of place in a Christian magazine, for of all organizations in the United States I believe there are none that threaten our Christian religion, our morals, home life, and Government, as does the Socialist party. My home is in Milwaukee, Wis., and so you cannot dispute the fact of my knowing what I say. Their administration in Milwaukee has been a volume of blunders, ignorance, vicious politics, and graft.

C. T. ISHAM.

MILWAUKEE, WIS.

Lack of Labor Interest.

I am dissatisfied with the position of your paper; you constantly ignore labor and labor organization. You are quoting those that are opposed to labor or organized labor, such as the article written by Harry Orchard, he himself a false swearer and murderer, holding him as a star of the laboring classes. And you also said in an editorial in the same paper that the majority of labor was simple-minded. You never give a fair statement of labor trouble or strikes, like the Lawrence strike; give one side, that is the capital side. All I ask of any party, be honest and square.

P. G. DEFENDORF.

BRISTOL, PA.

What She Cannot Stand.

The things I cannot stand about THE INDEPENDENT are your attitude on the negro question, and the reformed spelling, which gives me such unpleasant jars in reading. We are Northerners, "dyed in the wool" abolitionists, but we have been living in Virginia over twenty years. When we came we had some of the prejudices in favor of the negro race that you have. We haven't now. They are the most low-lived, no account, ungrateful, treacherous, mean, dishonest lot imaginable. No matter how much you do for them they will leave you in the lurch at a second's notice, for no reason.

FRANCESCA BOONE.

CHARLOTTESVILLE, VA.

The Independent, The Springfield Republican and Myself.

It has been a rare occasion when THE INDEPENDENT, the Springfield Republican and myself have been in such accord in politics as in the last months. While regretting many things in his course I yet had a genuine admiration for Roosevelt when he went out of the Presidency. But what spirit possesses him now! It almost seems a case of "reputation-suicide." I like your comments on the political field and the inside news you give us of the Catholic Church. And I thank Mr. Holt for the Japan articles.

W. S. HAWKES.

CALDWELL, IDAHO.

No Use for Us.

My objections to your magazine are many. It is in the class of *Appeal to Reason* and other Socialistic organs. Destructive in principle, and bigoted as Elbert Hubbard could want it. You assume to be more capable than Pope Pius X, in directing the 375,000,000 people who obey him in matters spiritual, and our President and Congress are almost as certain of condemnation in your columns, as that they decide a question contrary to your one-sided opinion. I have no use for your sheet and do not desire further communications from you.

NELLIE DUNCAN.

CLEARFIELD, IA.

Self-Respect.

As a subscriber thru my wife I am writing to you for an explanation on your part as a supposedly independent magazine for the statements that you make concerning the Democratic party. You state in an editorial, "They do not care for the poor people," again, "We have been expecting the Democrats to make some stupendous blunder, as they usually do." I know that it is doing THE INDEPENDENT no particular harm in asking that my subscription cease when the present year expires, but I believe that for my own self-respect I must ask this if you do not care to make a satisfactory explanation of your statement.

J. E. BUCHANAN.

CHENEY, WASH.

His First Contribution in Years.

I am writing to you at this time to say that your paper has been my "political Bible, as it were, for many years," and I am sorry I cannot follow you in your tirade in this week's issue on Roosevelt.

You are certainly right in your view that Roosevelt secured the presidency for Taft, and then at the suggestion of his stand-pat friends and progressives of the class of the President, he started a discrimination against any one, who like Roosevelt et al., were of a different type of progressiveness (?).

I would like to see this in print as my first contribution to THE INDEPENDENT in years.

CHAS. A. WOOD.

MECHANICSBURG, OHIO.

He Is Desperate.

I have always been eager to receive THE INDEPENDENT on account of its sobriety and fairness, but I will say that I was sadly disappointed with your last issue. It reads as tho you had joined the insurgents. Do you want this to be a rough and tumble country? You must apprehend Theodore Roosevelt. He is desperate. Taft's life is in danger by his own party. A bunch of Senators falsely stampeding the people and Theodore Roosevelt sees a chance for the greatest act of treachery and villainy that man has ever done. You ought to see very easily now that he cares nothing for honor. You let Theodore Roosevelt off by intent and criticised Taft too severely, especially the private letter. L. P. WILLITS.

LENEX, IOWA.

Deceiving the People.

The article by Senator Root on the "Importance of an Independent Judiciary" in THE INDEPENDENT of April 4 is based on a false assumption, ignores actual conditions, and is apparently intended to divert attention from the real issues involved in the present agitation.

The present agitation is not against courts of justice but against courts of injustice.

There was a time when such articles as this would deceive the people but that time is passed. Mr. Root's article is a reflection on the intelligence of your readers.

While your editorials are refreshing, I regret to note the tendency of your magazine to insert articles which attempt to make plausible the position of the special interests.

LEROY WELLER,

Acting President, Beaver College.

BEAVER, PA.

We Don't Ring True.

Many things about your paper appeal to me but when you strike some religious topics you hurt me. It seems to me the ring is not true.

I know I have no right to expect you to make the paper just to suit me, and I don't; and yet, there are certain things I have believed from my youth up and I feel that they are right, in my very heart and soul. So it makes me feel badly to have THE INDEPEN-

DENT strike me so—me and many others who think as I do. Were this not so, I would surely be on the list of subscribers. And I know others who feel the same way.

EDGAR L. VINCENT.

BINGHAMTON, N. Y.

Muzzling the Press.

The true mission of a magazine of the character of THE INDEPENDENT is to discuss every important public matter, and few more important matters have arisen in my lifetime than the attempt to suppress the radical press of the country by the freezing-out process.

If the editorial staff of THE INDEPENDENT do not know the motive behind the increase of second class rates they are not intelligent enough to edit a magazine that can enlighten me. If they do know but dare not express their opinions they are too cowardly for me to respect. If they know and do not desire to state the facts for business reasons and because their interests lie in leaving the people in ignorance, then they justify the conclusion which I drew that they belong to the class of publications which I positively will not support if I know it. CHARLES C. RODOLF.

MINNEAPOLIS, MINN.

The Catholic Question.

I would recommend to you earnestly to devote some attention to the Catholic question.

Believe my word, many intelligent people were indignant at that article in THE INDEPENDENT some months back of "Our New Cardinals." What in the world has our nation to do with those cardinals and the church of Rome? There is nothing more undemocratic than the Roman organization in this country.

The Catholic hierarchy is constantly combating our public schools, legal marriage, etc., and yet your paper has not the courage of old to stand up for the American nation and our free agencies by repelling these slanders.

Is THE INDEPENDENT still independent? Oh, for some of the spirit of old that will stand for principles. Surely the early history of your periodical was pre-eminent in its stand for moral convictions. SUBSCRIBER.

CHICAGO.

You Overwhelm Us.

I simply could not get along without THE INDEPENDENT. I admire you for your courage, fearlessness and devotion to the right, as you see it. I follow your editorials with pleasure and profit and the whole magazine is a looked for visitor at my home every week. Long may you live to defend the right and the real principles of true and genuine progress and reform. I want to comment, very definitely, for that able editorial in last week's issue on "Republican Presidential Candidates." It is, by all odds, the keenest analysis of the situation I have read. I commend you for your stand on the "Race Problem," "Liquor Problem," and all questions pertaining to Church and social betterment. I also regard you as

true "Progressives" in politics, but not wild "Radicals," as some so-called "Progressives" are. I believe that many so-called "Progressives" are very unfair to President Taft, and I admire you for giving Mr. Taft a "square deal," when many others refuse to do so. I am not even sure that the apostle of the "square deal" has been square with Mr. Taft. You have never failed to notice the good in President Taft's administration, even tho you, like others, have found some mistakes. In this, you are right.

I heartily endorse your "Peace Program," and every other right cause for which you stand.

R. T.

CANONSBURG, PA.

T. R. and New Jerusalem.

As a most earnest well-wisher of progressive movements and progressive legislation and a worker for the juster relations so many desire to see between man and man, in whatever station found, I believe I represent a large element in the South that shares in the deep disappointment felt in the North over Mr. Roosevelt's entrance into the struggle to win the Presidency of the United States again. We have been hoping that the nation had found in such men as Roosevelt, Bryan, Governor Hadley, La Follette, Woodrow Wilson, and others in their class, leaders who would set aside, crucify if need demand, their personal ambitions that they might serve the New America we believe our country has determined on becoming—has already become in sufficient measure to kindle great faith in true patriots, as prophets of the new puritanism in politics and statesmanship.

(Rev.) G. E. CUNNINGHAM.

LITTLE ROCK, ARK.

Popularizing vs. Personalizing Science.

Your recent editorial entitled "The Middleman in Science," is one of the most timely, interesting and effective articles that I have read for a long time. To continue the piling up of voluminous biological data is valuable to a certain extent. There are doubtless results to be obtained from colossal documents and interminable series of figures. All honor to those that have given large sums of money for investigating the structure of the most distant stars, for scraping the bottom of the deepest ocean, for ascertaining the color preferences of recently hatched turtles, for measuring the length, breadth and thickness of *Daphnia*, or for observing the influence of varying temperature on the color spots of potato beetles.

But, dear Mr. Editor, I fear that you lay a little too much stress upon popularizing to the neglect of personalizing.

It is not so much the popularizing of science that is needed, as the making of that science applicable in human life. We have built so many churches and have scattered books and periodicals in so large proportion that the need is no more the popularizing of religious matters, but the inspiring and the improving of human life by the personal application of those religious principles. Science is in the same

situation. We human beings have enormous temples of science, voluminous libraries and a multiplicity of machines. What we now actually need is more human lives brought into enthusiastic harmony and attunement with nature. Where is the man or woman who will recognize and support financially a humanized fact rather than one that is isolated. It is the aim of the Agassiz Association to incite a personal love and a personal interest for nature rather than to help him to accumulate more scientific data.

EDWARD F. BIGELOW.

President of the Agassiz Association.

SOUND BEACH, CONN.

A Plea for the Narrow Skirt.

The narrow skirt is not a fad for displaying the graceful curves of a woman's figure, for making her attractive "without a face," but an evolution. To be sure we have not reached perfection yet, but we are going in that direction. Women have gradually learned that skirts can be made comfortable, and graceful, without the superfluous material bunched or pleated in here and there, that was once thought necessary.

To the home dressmaker it is a boon. With the present simple fashions a woman can have two dresses for the same money and time that one formerly required. And as more and more women every year are making their own clothes, this is no small thing in its favor.

Then why should we go back to the cumbersome skirts of a few years past, or the more cumbersome hook-skirts, or the voluminous skirts of ante-bellum days?

A HOME DRESSMAKER.

MONTANA.

W. J. Bryan.

I have read THE INDEPENDENT the past year with interest. I have noted your excellent editorials and feel that you have a valuable publication, but I hold in very high esteem those men who have given their lives to the betterment of America, an one man in particular I hold in such esteem that I cannot read an editorial that in any way makes light of him and continue to enjoy the editorial. I name the man who takes political defeat rather than advocate what he does not believe tho it would lead to victory. I name the man who is working with all of influence for temperance. I name him who is an inspiration to a Christian and helper to those who would be helped. William Jennings Bryan is not praised by any of the \$3 papers because we who are back of him do not own large interests in steel, or oil, etc., nor in large newspapers, but we are desirous of seeing good from whatever source and if there is anything sacred it is the man who throws all the strength he has into the righteous side of all questions. He has been killed and burned by his repeated acts these sixteen years, but there is no name with the force that the name W. J. Bryan has in America and if you are in a position where you can safely study him I respectfully refer his life and every act to your most careful consideration.

H. R. H. WILLIAMS.

GRAND ISLAND, NEB.

A Seed in Fruitful Soil.

The best circular letter that has come to my desk in a long time is yours of March 1. Your personal humility in your capacity as editor, and the love, loyalty and affection which you show to your old, lost subscribers, are so absolutely pathetic that you have repeated the miracle of drawing water from the rock and blood from the stone, and got \$2 from me.

Up to now I have always thought that dominance was the pulling power in business literature, but if other men are as I am, and if the masses respond to the same variety of touch as I do, I shall change my method.

With the success of your letter upon myself as an inspiration, I shall write my own next circular letter in suppliant vein, mentally clothed in sackcloth and ashes, holding in my left hand a picture of Rachel weeping for her children, and visualizing the humiliations of Gethsemane and Golgotha.

THOMAS E. DOCKRELL.

NEW YORK CITY.

-Rough Housing.

As principal of a New England academy I want to enter a hearty protest against the appearance of the article entitled "Rough-housing" in the January 25 issue of THE INDEPENDENT. I am sure I do not fail to see the point that the writer is trying to make. The sentiment he expresses in the latter part of the article is fine and it is couched in pleasing language, but his reference of relationship is unhappily chosen.

Could the writer of the article see some of the protesting letters which a principal receives from the parents of these rough-housing boys, protesting because the principal insists on putting the cost of some breakage "on the bill"; if he could hear them declare it was our duty to stop the breakage, not allow it to happen and then "charge it"; if he could know that some of these boys' parents are hardly able to keep the boy in school with legitimate expense, it seems to me he would see there is no place for "rough-housing" in school-life.

I do not care to enter into a discussion of the moral effects, both upon the boy and upon the teacher who must set to rights the damage done by this same "rough-housing." I shall mention only one other feature. This may seem small, and yet it is of vital interest to a school located as mine is. It is January. The thermometer registers zero or below. A good gale is blowing. A rough-house breaks a window in the dormitory. Either the boy must sleep that night with the storm coming in at the broken window, or I must call my already over-worked janitor, who even then is struggling with an obstinate furnace, trying to warm the corridors to inhabitability, to come and spend an hour repairing the work of a so-called harmless rough-house. I have taken as an example a broken window. The same principle applies, and to a greater degree, to other damage.

Your paper lies on our library table. All of our students read it. Already I have seen some calling attention of others to the article,

and all laughing in high glee over the statements.

I do not mean to eliminate all the boyishness from the school corridors, but I do maintain that open approval of "rough-housing" cannot work for good either of the school or the student. Mere mention is all that is necessary in this paper. Instances are not lacking to back up all that is said. I find the former reputation of this school has been very seriously damaged among its more influential prospective patrons, because of the evidence of "harmless" or even "beneficial" rough-housing, seen in the corridors.

Please note I have said nothing on the methods of subduing or eliminating this phase of school life. I merely assert that rough-housing is not a necessary part of the school curriculum.

L. R. JONES.

VASSALBORO, ME.

Since 1848.

When you were born in 1848 I was a farmer's boy of twelve in Bucks County, Pa. Less than twenty years before Peter Cooper had made the little engine, "Tom Thumb." Rail-roading was in its infancy—only four years before your birth.

The first news was sent by magnetic telegraph (May 29, 1844). Mr. Morse had erected wires from Baltimore to Washington, and the first message sent was "What hath God wrought!" (Numbers, 23:23).

The first news was: "James K. Polk nominated for President" (the Democratic Convention being in session at Baltimore).

If on that May day (1844) Mr. Morse could have seen down the age for a half century he must have repeated with increased animation, "What hath God wrought!!"

The very year you were born gold was discovered in California. Our country in those days was weak among the nations of the world; in fact, it was on trial as to whether that form of government would stand the test of years.

We had Henry Clay, Daniel Webster, John C. Calhoun, A. Lincoln, U. S. Grant, McKinley and many other noble men, who strove not for self but for the good of the nation. "Blessed is that people whose God is the Lord."

As we look around to-day and realize the immense strides in all lines of work, we are amazed at the expansion.

We thank God that we have been permitted to live during these years of growth.

We are conscious that your pages have materially assisted in these grand results.

In all these sixty-four years, whenever we have looked into your pages we have found something worth while and helpful.

Looking back upon these untold blessings, we heed the leading of the Spirit, in thankful quiet, Christian living.

Forget not the mighty nation you have so materially helped to build up during these three score years. Press on, and when your work is finished may you receive a Crown of Life.

LEWIS C. PAXSON.

STOCKTON, N. J.

Literature

Dramatic Poems

IN spite of Bonaparte's remark that the verse which phrases them is only the fringe on the robe of dramatic poetry, and in spite of the fact that our actors ignore the way in which verse is to be read, dramatic poetry is not yet an abandoned art. Mr. William Watson, for example, in *The Heralds of the Dawn*, renews something of our faith in the form by writing unstrained, direct dialog that bears a full tide of thought and a sound understanding of the true modern progressive movement.¹ With foresight of Niagaras ahead, already sounding in our ears, he is neither pessimist nor blind optimist. His conclusion is one of promise. There is no sunset without a dawn, in prevision at least; no tragic fall of the flowers that does not leave the buds of a new spring prefigured. For the vehicle of his verse he takes the unrhymed pentameter of the master of verse, and it carries with ease, clear aim and precision. The dignity is held on the Shakespeare terms, that it shall be seasoned with wit, humor and even drollery at times. Says Puncheon in the play, at a moment when blood is high and rustics stand about, dazed:

"As for me,
I've a mind to go about my business,
For I begin to think that politics are
A study should be left to learned men,
Such as astronomers, and the best-born
clergy."

Says Garlic, the clown of the riff-raff:

"I had an uncle was a great traveler, but he made a true repentance and died a right godly man, much honored as a cheesemonger."

Here is a pair discussing greatness. Says a child fresh from the country:

"Mother, what is a great man like, to look at?"

"Lord, child, how should I know, that never saw one?"

"I should fear to meet one in a dark night."

And here is one of the great ones—a minister of state, soliloquizing of his

fellow minister of state. The speaker has qualms of conscience; the other has none to speak of:

"How covetable that strictly bounded mind,
No shreds of twilight hanging loose upon it!
Mine own leans out into the dark, and so
Hazards its very balance, in hope to catch
The footfall of events ere they arrive,
And from the dark wins nothing. 'Tis to no
Purpose one plays the eavesdropper about
Fate's door,
The servants there are incorruptible,
And will not sell one secret of the world."

Ideonia is the imaginary seat of the kingdom of the Foregone. The drama opens on the borders of the land, where a victorious army has encamped. Here has been the theater of wrong and ruin; a great general and a simple rustic, Abbo of the Woods, whose daughter has been the victim of the general's lust, are in close proximity. The general has his innings for the time; later Abbo has his, but is before the judgment seat and about to be condemned, to the great satisfaction of the king's followers, who are not willing to await any defense the victim has to offer. The old king is near his end. The young prince, soon to take the throne, Prince Hesperus he is, facing the future as his father faces the past, stands between the angry soldiery and the murderer of their general:

"Again I charge you, harm him not!
Stand off from him. So great a murderer
Shall fall not thus, beneath your casual steel.
No single arm shall hew him down haphazard,
Nor aught less than a realm and people be
His executioner; for he shall have
Justice, a thing more terrible to the wicked
Than random vengeance. Take ye him away,
And set strict guard on him. Deny him not
The smallest customary privilege
The law decrees for men yet uncondemned.
Omit no form, fulfill each due observance,
And let him at the fitting place and time,
Be brought to trial and judgment, that here-
after,
None shall have cause to say of us, 'They
gave
The violent up to violence, and delivered
Unto the lawless them that broke the laws.'
Take ye him hence and do no wrong to him."

Besides the beauty of the rhythm, its variety in stress of vowels, its fine variation in pause, the nimbleness of its little

¹THE HERALDS OF THE DAWN. A Play in Eight Scenes. By William Watson. New York: John Lane Company. \$1.25.

feet, the pretty little vaults the iamb takes as it dances along, its loan of a syllable to the last beat in four of the lines, out of a pure exuberance of joy in its own privilege of unfettered movement—besides all this, there is the high thought of a grand civilization that knows its own worth and is borrowing nothing from Utopia. The millennium is still far off, but there is a silver hint of it.

A younger poet than Mr. Watson composes in the high vein of Tennyson's "Idylls of the King" his *Tragedy of Etarre*.² If Mr. Rhys Carpenter were writing for the stage we would have to complain of his poem that it was pitched too high, too much in monotone, but as a fine dramatic venture for parlor reading, of the spirit and form of Longfellow's "Golden Legend," it has many charms. The plot is simple. The knight Gawaine, wandering in mist and under a gray sky, meets three maidens, of an airy consistence, who give him the choice of a guide thru a life of contest. If he accepts the first, he advances with youth at the fore, beauty, bright eyes, love and uncertainty, with the joys and mysteries of uncertainty, in a world of romantic adventure. If his choice is the second, "Ours is a dark fulfilment," he is told.

"The plume that flutters down the tired wind
Is not more idly grasped, nor with less toil
Attained, than is the secret of our word."

He chooses the second, altho the third offers "a gift of wisdom greater than the strength of kings." Presently he meets with a knight, Pelleas, who lies on a wild upland, beaten and bruised by three attendants and ministers of the fair lady of the Castle of Etarre, whose love he hopes to win by a futile humility waiting on a past of achievement. He has hitherto found humility not a good working capital with a high-spirited lady. So, at any rate, Sir Gawaine thinks, and offers to personate the lover and win his thanks by a more heroic front, waiting on a deed of his own—an imaginary deed—calculated to excite compassion in the heart of the lady, and as pity leads the mind to love, Sir Gawaine honestly hopes to gain the difficult prize for the humble knight. The two swear to con-

duct the game with the highest honor. A little divinity steps in whose ways are not as the ways of either of the two knights, but it wouldn't be fair to the reader to tell the deeds of this little imp of mischief; nor would it be fair to the poet not to say that he has taken a long step on the poet's path toward that marvelous rhythm to be found in its perfection in Shakespeare's dramatic verse and in Wordsworth's simplicity in the use of metaphor. The one has a swing in the iambic pentameter worth studying all one's life—a swing not to be told in the books of rhetoric. The other has a delicate sense in the choice of words that climb. Not Jack on his beanpole gets nearer the heavens than does the little word rightly chosen and under high training for the climb. The poem has many fine passages which one would like to quote. None better illustrates the climbing rhythm than the touching good night of the wayward lady:

"Kiss me once more, till love be bared indeed
And I in sweet communion with thy thoughts
Be drawn into thy life and be a dream
Within thy mind, a pulse within thy heart.—
Kiss me once more, till life forsake his toil
Of mystic alchemy and hidden consonance
Of soul with body."

The scene of Mr. Edward Doyle's new play³ is the Florence of 1400; the atmosphere that of a plague-stricken city in a time when man was helpless, authorities hopeless, social life in shreds and patches. The plot of the play founded on this state of affairs is rich in incident, varied and sufficiently complex in color, passion and character to furnish material for an exciting spectacular representation. The tragic element is strong, but supported and shaded by a company of roysterers, a jester whose foolery is a compound of the bluff of that period and the bluff of modern politics and athletics. The jester, the black company and the penitents, together with the roysterers, form now the foreground, now the background, of action, which in itself is never without the dolorous sound of the death bell. The doomed city is under a spell comparable to that set forth so vividly in Manzoni's "I Promessi Sposi." Says the villain of the plot, as he listens from his seat at the festive board:

²THE TRAGEDY OF ETARRE. A Poem. By Rhys Carpenter. New York: Sturgis & Walton Company. \$1.25.

³GENEVRA. A Play of Medieval Florence. By Edward Doyle. New York: Doyle & Co.

"It bodes ill for the black-cowled company
 To make a visit to a festive house.
 'Tis like death looking in and whispering,
 'Next.'
 Fool, call the servants. Bid them fetch the
 wine—
 A cask of it—the best vernaccio!
 Here come my friends to help me drown the
 Plague."

Pictures like this, as sharply defined, are frequent, and throw in shadow blackening on shadow. The author defends the use of a meteorological phenomenon translated in the spirit of the time as supernatural, by quoting Dante as recognizing it; but the authority of Dante was not necessary to justify the dramatist in introducing the "Crimson Cross"; it was a part of the pyrotechnics of the Church propaganda. Tho the advance of scientific discovery has laid a heavy hand on thaumaturgy of the sort, it would, no doubt, have its use when properly handled on a modern stage. The action of the drama is rapid and natural, the characters well drawn and individualized, the dialog spicy, forceful and varied.

Florence is the scene of yet another drama. With a king of France, a prince of the Medici, and Savonarola in the foreground, armies marching and countermarching in the background, Philip Decker Goetz takes us back to the year 1494, when Columbus was on the seas.⁴ The story of the play finds the king in love with a beautiful peasant girl, the son of the Medici crosses the king's path, and naturally there is a clash of wits in the stage language of that old time—for the artificial lingo of kings and courts finds favor with Mr. Goetz. It was the grand pace of Shakespeare, who used it chiefly for kings and filled their mouths with sonorous phrases suited to the atmosphere of Mars and Jupiter. But the pretty peasant girl, who pleased her paramour the king, would not have pleased him long if she had indulged herself in such high-flown phrases as these (she is speaking of the king to a new lover):

"He will not juggle any word he says,
 But after he will gloze the soul he bodied
 With smooth, obscuring phrase, refuting all
 You thought he said. Hard pressed, importuned to't,
 He turns your mildest friend from hostile
 eyes."

VINCENZO.

Who saddened you with all this world-old
 wisdom?

LOIS.

Youth greys in brief apprenticeship to sin
 And Latin is the general tomb of joy,
 Which, when I learned with quick accomplishment

While yet a girl, I little thought the dim
 Premonitory cadences my tongue
 Should sound with perilous pleasing of a
 king."

This language spread over five acts on a modern stage would be "perilous pleasing" to the galleries.

The Church and the New Age

THE recent rapid rise of democracy in the Old World and its rebirth in the New have been accompanied by the emergence of a new social consciousness which is slowly taking form as a controlling principle destined to counteract the irresponsible tendencies of democratic freedom. Every institution is confronted if not confused by the new issues which these changes are bringing to the fore. The shifting of emphasis and the realignment for forward movements are especially noticeable in the counsels of the wisest leaders of the Churches which have usually been considered the most conservative of all organizations. How can the Church best meet the new conditions? Which social aims and tendencies may be regarded as in harmony with the Christian ideal and receive the stamp of Christian approval? What part should Church leadership take in promoting the changes already in progress?

Such questions as these are agitating the minds of thoughtful men who have the best interests of the Church and humanity at heart. A careful, conscientious and impressive survey of the whole situation from an English point of view is found in Rev. Henry Carter's volume on *The Church and the New Age*.¹ The present condition and resources of the Church are analyzed, the character and ideals of British democracy are discussed, and ways are pointed out by which the Christian forces may be more effectively applied to the urgent problems of social reform. Mr. Carter feels

⁴THE SUMMONS OF A KING. A Play. By Philip Decker Goetz. Buffalo: The McDowell Press.

¹THE CHURCH AND THE NEW AGE. By Rev. Henry Carter. New York: George H. Doran Co. \$1.25.

strongly that if the Church is to have her rightful part in ushering in better social conditions, a clearer apprehension of the "will of God for social life," gained by study and conference, must prevail. Many Church leaders and the Church as a whole must know "the poor, not ecclesiastically as sinners beyond the pale, but humanly as brothers in distress." The author's historical outline and illustrations are English, but similar conditions make his principles and suggestions instructive and applicable in our own country.

With equal force Professor Batten, in his discussion of *The Social Task of Christianity*,² emphasizes the new era and opportunity which have come to the Church thru social movements and the necessity laid upon Christianity to supply moral impetus and universal ideals in the struggles yet to be carried on. While the author does not minimize Christianity's past accomplishments, he regards these as but a guarantee that the greater tasks now confronting the Churches will be undertaken with sufficient earnestness and vigor to insure the progress and ultimate victory of Christian ideals. The power of our religion, he declares, was once demonstrated by changes wrought in individual lives, and the credentials of the Churches were found in "historical continuities" and creeds; in the future the decisive test of Christian claims will be the measure of ability to reconstruct the social order and provide a suitable environment for the culture of a type of humanity dominated by the principles and spirit of Christ.

Rev. John Haynes Holmes writes with more fire and less caution. He sets small store by the work of the Church in the past, for almost since the days of Jesus her leaders have missed an essential point in the full program of salvation: "the social nature of the individual life." He contends that Romanist, Protestant and nineteenth century liberal have all failed to do the real work of Christianity because of this misunderstanding. To emancipate humanity from sin, social reform is necessary. We must redeem the individual "thru the delib-

erate reconstruction of the social organism." Mr. Holmes's studies lead him to believe that sin, disease and poverty are equally and entirely social in origin and can be cured thru social changes. Income is the panacea and social justice the method. Therefore he would have the Church cease its direct efforts for the individual and take as its appointed task the reconstruction of the social fabric. The author holds that in adopting this *Revolutionary Function of the Modern Church*³ Christianity would be giving proper expression to the "revolutionary consciousness" of Jesus and so would return to its initial social impulse and yield "once again to the perfect mastery of Christ." Few will follow Mr. Holmes in his extreme views, but his book is a stirring challenge to Christian thought and conscience, and indicates the fearless examination Christian leaders are giving social questions.

As an outline of practical social reforms that have already gained the attention of the Churches and need to be prosecuted with increasing vigor, the compilation⁴ authorized by the Social Service Commission of the Federal Council of the Churches of Christ in America deserves high commendation. The various essays are written by competent men on the separate items of the social program which was adopted by the council in 1908, and which in itself alone would justify the existence of that organization. Unemployment, child labor, a living wage, protection of the worker, and workmen's compensation are some of the subjects discussed from the standpoint of Christian ethics and ideals. The volume would make an excellent handbook for classes studying social service problems.

The reading of these four volumes impresses one with the determination, resources and honest endeavors of the Churches to grapple with the difficulties arising from social change, and we believe the authors are justified in emphasizing the importance of the religious contribution to any permanent settlement of the present social disturbances.

²THE SOCIAL TASK OF CHRISTIANITY. By Samuel Zane Batten, Professor of Social Science, Des Moines College. New York: Fleming H. Revell Co. \$1.25.

³THE REVOLUTIONARY FUNCTION OF THE MODERN CHURCH. By John Haynes Holmes, Minister of the Church of the Messiah, New York. New York: G. P. Putnam's Sons. \$1.50.

⁴SOCIAL CREED OF THE CHURCHES. Edited by Harry F. Ward. New York: Eaton & Mains. 50 cents.

Among the Idolmakers. By L. P. Jacks. New York: Henry Holt & Co. \$1.35.

For a theologian and a philosopher the editor of the *Hibbert Journal* has an uncommonly lively fancy. It puts queer ideas into his head, one of the strangest being that a person's philosophy on religious belief ought show itself somehow in his life. Of course there have always been people who thought that—of late they have been called pragmatists—but few have ventured to imagine so clearly as Mr. Jacks the consequences that would follow an attempt to put into practice some of the theories we hear advocated. The cleverest sketch in this volume is that describing "The Reformers' Paradise," a sort of a philosophical experiment station, a settlement endowed by an eccentric millionaire where any one who had got up a new religion or mode of life could try it out and see how it worked. Here the Free Lovers and the Futurists may quarrel to their hearts' content; here side by side stand churches devoted to the Worship of Ancestors, to the Worship of Posterity and to the Worship of Our Noble Selves; here the Cult of Failure, the Cult of Nothing and the Cult of the Sacred Rat find a refuge; here flock the health faddists, the man who eats dirt, the man who spends most of the day in a Turkish bath, and the president of the League of New Gorillas. But somehow the experiment is not a success; at least, it does not accomplish its object, the Unification of all the Idealisms. Another chapter in the volume is devoted to the strange dilemma of the man who read a book on free will that was absolutely convincing to him. He applied for admission to the Libertarian League, but was rejected when he confessed that he did not do it from choice, but because he was compelled to believe in the will. He next tried the Determinist Club, but was there also pronounced ineligible because he admitted that he came to them of his own free will. So back and forth like a shuttlecock he went, for as soon as he had been convinced by the arguments of one side, he was logically bound to go to the other. For those who do not like such philosophic fantasies there are a couple of stories showing the regenerative influence of the Canadian climate on

English character, in which pioneer life is so enthusiastically depicted that one might mistake them for emigration tracts issued under the auspices of the Canadian Pacific.

The New Life of George Borrow. Compiled from Unpublished Official Documents, His Works, Correspondence, etc. By Herbert Jenkins. Illustrated. 8vo, pp. 496. New York: G. P. Putnam's Sons. \$3.50.

Letters of George Borrow to the British and Foreign Bible Society. Edited by T. H. Darlow. 8vo, pp. 471. New York: Hodder & Stoughton. \$3.

In spite of the emphasis which the publishers give to the statement that the "new" life of George Borrow is based upon "information not accessible elsewhere," we are not much impressed. It would have been in better taste to have let Mr. Jenkins's authoritative account of a most interesting personality speak for itself: the business of writing and publishing books does not properly make use of the noisy methods of safety razor vendors. Mr. Jenkins's book is not noisy, however. Tho its hero was a lover of most diverse elements in life—beer, bruisers, linguistics and evangelism, to say nothing of road girls—the biographer makes no effort to coin striking epigrams. He is content to narrate soberly—but almost dully—the life of "the poor lad," whose father claimed to "have observed attentively," without seeing "what to make of him." Was there ever a less likely candidate for either the law or the Bible Society? In some ways the pug-nacious author of "The Bible in Spain" was a thoro English Protestant, whose anti-Papal sentiments were "Elizabethan in their fury." But Borrow was not prosaically consistent: he was superstitious as well as Protestant, and was a born romantic in his love of the road. We do not say that all the mysteries of his life and character are elucidated by Mr. Jenkins, but his account is fuller than any other in respect to more than one passage of the colporteur's life, and will supplant Dr. Knapp on many bookshelves. For one thing, this later biographer had access to a copy of the letters addressed to the British and Foreign Bible Society: letters which are now accessible to all the world, edited with scrupulous care and scholarship by an official of that society.

When Borrow wrote "The Bible in Spain" he

"obtained from the Committee of the Bible Society the loan of the letters which are here published, and introduced considerable portions of them into that most picturesque and popular of his works."

It must be confessed that the cream of the letters was poured into the new mold, and that the casual reader will find no inducement to prefer the materials to the masterpiece.

The Contest for California in 1861. By Elijah R. Kennedy. Pp. xiv, 366. Illustrations. Boston: Houghton Mifflin Co. \$2.25

A college professor, coming upon a marble statue in the capitol inscribed with the simple legend "Baker," is said to have asked, "Who was Baker? What did he do to get in here?" This question prompted Mr. Kennedy to write an instructive and very entertaining biography. The title of the book is not altogether felicitous, since California and the secession movement appear only incidentally, as the background of the hero's achievements; but the story is capitally told. Colonel Edward T. Baker was a remarkable man, especially remarkable in the diversity of his talents. In three wars he showed himself a brave soldier and skilful commander; he was a pioneer in the building of the Panama railroad; as a lawyer he ranked with the leaders of the bar in Illinois and California; he was a prominent member, first of the House of Representatives, then of the Senate; and in an age of orators he was commonly regarded as the most eloquent American of the time. Crowds came to hear his arguments in court, and on one occasion, when the question of liability on a promissory note gave the Colonel little opportunity to spread himself, they shouted for a speech. That same evening, without preparation, he did give them a speech; one which was on the subject of "Books" and which led a Justice of the Supreme Court to say, "Baker, you know everything about books—except law books." Yet, like Franklin and Lincoln and Greeley, the man had no systematic education; he simply read eagerly by himself and kept in his retentive mind everything which he read. Mr. Kennedy, having known Colonel Baker intimately, is able to explain something

of the charm and inspiration which friends found in him—"as gentle and pure and unselfish and generous and eloquent a man as ever cheerfully gave his life for a noble cause."

The Expedition of the Donner Party and Its Tragic Fate. By Eliza P. Donner Houghton. Chicago: A. C. McClurg & Co. \$2.

In many ways the history of the Donner party, which was lost in the Sierra Nevada in the winter of 1846-1847, is an epitome of the great shifting of population that colonized the Pacific West. Its leader came immediately from Illinois, but was born in North Carolina, and had followed his improving fortunes into Kentucky, Indiana, Illinois, Texas, and back to Illinois, before he fell victim to the Western fever, divided his estate, and took his wife and children on their disastrous journey. From the Missouri border to the Great Salt Lake, the trip was uneventful; but the caravan followed the wrong road across the Nevada desert, suffered the pangs of hunger, thirst and cold, and faced winter and starvation in the mountains. Eighty-one persons remained in the party when it reached the mountains, only forty-five lived to reach the California settlement. It is true that in their extremity the living ate the frozen bodies of the dead, but a truer measure of their character is the fact that of the survivors only five were men. Thirty-two children and eight women were saved. One of these children, born in 1843, is the author of this graphic history, and now keeps her promise "that when I grew to be a woman I would tell the story of my party so clearly that no one could doubt its truth" (231). From the human standpoint, her document is irresistible. Historically, tho entirely convincing, it is over-dressed. Mrs. Houghton, now sixty-nine years old, is telling of events that occurred when she was four, yet she gives long conversations which pretend to be the actual words that passed. She records others which she does not claim to have heard. She rarely gives exact references to the voluminous literature on the expedition which she has used. The volume shows the crudeness of the hand untrained in historical construction, yet it is true in its funda-

mentals, and thru it all runs the grisly but absorbing story of a migration that is finished and an era that is gone.

Wings of Desire. By M. P. Willcocks. New York: John Lane Co. \$1.30.

This is an unusual novel; it is masculine in style and feminine in point of view. Generally books by women are simple in structure, with few characters and sketched in broad lines. But Miss Willcocks employs a rich vocabulary, full of curious expressions, and she takes as much delight in technical terms as Moore, Conrad or Meredith. The scene changes as often as in a Shakespearean play and the characters are so numerous that it is hard to keep track of them all, tho they are carefully enough differentiated. The author seems equally at home in England and Punta Arenas, on shipboard and ashore, in saloon and boudoir. The theme of the book is woman's rights, not in the narrow and comparatively trivial sense of the ballot, but the right of women to choose their own ideals and to establish their own standards of morality, instead of confining themselves to the cultivation of those virtues assigned to them by the stronger sex. But if such independence from masculine conceptions of femininity is ever to be attained, we hope that the desires and dispositions which Miss Willcocks ascribes to women in this novel are not common to the sex. The stringency and injustice of the English divorce law makes plausible, but not pardonable, the conduct which the author attempts to justify.

The Negro in Pennsylvania. Slavery—Servitude—Freedom. 1639-1861. By Edward Raymond Farner, Ph. D., Professor of History in the University of Michigan. Pp. xii, 314. Washington: American Historical Association. \$1.50.

An immense amount of careful labor has been put into this book, which received the Historical Association's prize for 1910. We are told of the introduction of slavery into Pennsylvania, the legal status of the negro, his gradual emancipation, and the story of prejudice and abolition. It is a sad history, except that one is impressed by the immensely better condition of the negro in the State at present as compared with that in the

years before the Civil War. The book is to a considerable extent the account of the noble work of the Friends to ameliorate the condition of the negro and to secure his rights against overwhelming prejudice and injustice. The reader of the book will be impressed by the wealth of authorities supporting the author's statements which appear as notes on every page.

Scientific Mental Healing. By H. Addington Bruce. Boston: Little, Brown & Co. \$1.50.

Psychotherapy in various guises flashed upon the American public out of a clear sky, like most movements in this country, where it often happens that something very old turns up as a new discovery. Consequently, such a book as this is especially useful here in showing us what a long history mental healing has and how much work has been done on the subject by European scientists. Mr. Bruce has for many years been interested in the exploration of the borderland of unknown psychology, and he includes in this volume a summary of the half century of psychical research, as well as an account of the investigations of Prince and Sidis on dissociations and other maladies of the personality and of the dream theory of Freud.

Intellectual and Political Currents in the Far East. By Paul S. Reinsch. Boston: Houghton Mifflin Co. \$2.

This is the best piece of work that Professor Reinsch has yet done, which is certainly not faint praise. As a penetrating and subjective interpretation of the Far Eastern races, their political tenets and tendencies and their thought currents, it can hardly be praised too highly. With the exception of Lafcadio Hearn we recall no Western writer on the East who has conveyed his ideas in such an analytical and alluring literary style. The book is of such a nature that it cannot be easily epitomized in the space of an ordinary review, hence we content ourselves with merely advising those of our readers who would understand the great psychical forces underlying the unfolding civilization of the Far East to put themselves under the spell of Professor Reinsch's fascinating volume.

Literary Notes

....Baseball enthusiasts will find *The Ten Thousand Dollar Arm*, by Charles E. Van Loan (Small, Maynard; \$1.25), interesting reading. It is filled with dramatic situations, where the right thing happens at the right time. To any one but a "fan" a large part of the vocabulary would be unintelligible.

....Emile Legouis, professor of English literature at the Sorbonne, has just published thru Bloud et Cie, of Paris, a contribution to the series entitled *Les Grands Ecrivains étrangers on Chaucer*. Professor Legouis will represent the Sorbonne at Harvard University next fall as exchange professor.

....Octave Uzanne has written, in *The Modern Parisienne*, essays that are invariably either brilliant or vividly instructive—and sometimes both. His lightness of touch is far from involving flippancy, and the problem of prostitution, open or clandestine, receives extended treatment. The translation is admirable. (Putnam; \$2.25.)

....The May issue of the *Annals of the American Academy of Political and Social Science* is devoted to a symposium on "Efficiency in City Government," including many valuable documents, and a supplement treats of "Timber Bonds as Investment Securities." (Philadelphia: American Academy of Political and Social Science; \$1.)

....From the Library of Congress we receive a *Select List of References on the Initiative, Referendum and Recall*, compiled under the direction of Hermann H. B. Meyer, chief bibliographer. Books, pamphlets, magazine articles and public documents all figure in the list of references, which, with two indices, fills one hundred and two pages.

....From the Chicago publisher we receive the seventh edition of *Who's Who in America*, being the volume for 1912-1913. This work of reference, indispensable for every journalist and every library, has been brought down to date and now contains almost nineteen hundred biographies, with eight thousand cross references to earlier editions. Altho it contains two thousand pages more than the volume for 1910-1911, the new edition occupies less space. (A. N. Marquis & Co.; \$5.)

....An interesting biographical sketch is *The Life Story of J. Pierpont Morgan*, by Carl Hovey (Sturgis & Walton; \$2.50). In reading this account of a great captain of capital, one realizes how closely his life has been associated with great events in our history: the railroad development following the Civil War,

the Treasury crisis of 1895, the period of the combination of industries, and, finally, the panic of 1907. The present volume barely glances at Mr. Morgan's interests as an art collector and man of the world. The point of view is favorable to the great financier.

....Constance d'Arcy Mackay has written some *Patriotic Plays and Pageants for Young People* (Holt; \$1.35), one-act pieces calling for simple costume. Dealing with the youth of our American heroes, they will be welcomed by the teacher, the leader of summer camps, and the social worker. They have educational interest, and make an up-to-date appeal to a "safe and sane" patriotism.

....This is the season for baseball verse and a volume of it comes to us from Forbes & Co., the Chicago publishers: *Baseballogy*, by Edmund Vance Cooke (50 cents). Nothing in the little volume comes up to some lines of the Field brothers, written a good many years ago; but the slang and black and white sketches which illustrate the text will please enthusiasts.

....Number twenty-six of the "People's Books" issued in New York by the Dodge Publishing Company is entitled *Henri Bergson: The Philosophy of Change* and is contributed by H. Wildon Carr. We defer criticism of this brief statement of the French pragmatist's philosophy, published at twenty cents; but it is an interesting fact that M. Bergson himself suggested Mr. Carr's title. Another résumé is to be found in René Gilouin's *La Philosophie de Henri Bergson*.

....Joseph de Smet contributes to the *Mer-cure de France* of May 1 an appreciation of Joseph Conrad of which the last paragraph but two is as follows:

"It has been said that Conrad is the Rudyard Kipling of the sea and even in England these two creators have been weighed against one another. Different tho they are, they do not fail to offer points of contrast. The psychology of Conrad has more depth and his value is notably more sustained."

The same critic has lately published thru the Société du Mercure de France a work on *Lafcadio Hearn*, the man and the work (3 francs 50), which is in some ways the most scholarly attempt at an evaluation of the greatest English stylist since Pater, besides offering a generally adequate biographical sketch.

....Intelligent sight-seeing is always the most enjoyable as well as the most profitable, and travelers intending to visit the cathedral churches of England may easily put themselves in the intelligent class by reading the appropriate sections of Miss Esther Singleton's unpretentious, compact volume entitled *How to*

Visit the English Cathedrals (Dodd; \$2). The text contains many extended quotations wisely selected from the best authorities, the descriptions are comparatively untechnical, the information accurate, and the illustrations numerous enough to make clear the author's explanations and familiarize the reader with the leading characteristics of the various styles of cathedral architecture.

....E. B. Havell, the author of "Indian Sculpture and Painting," has now supplemented that standard work with an illuminating book on *The Ideals of Indian Art* (Dutton; \$5)—probably the most enlightening book on this subject ever written in English. His interest centers in the fact that

"Indian art is still a living thing with vast potentialities, of such unique value to India and all the world that it should be regarded as a great national trust which Great Britain is bound to honor and duty to guard and maintain."

He points out that Hindu art was not adrest, like modern Western art, to a narrow coterie of *litterati* for their pleasure and distraction. Its intention was to make the central ideas of Hindu religion and philosophy intelligible to all Hinduism, to satisfy the unlettered but not unlearned Hindu peasant as well as the intellectual Brahmin. And so he finds that Hindu symbolism is justified because it speaks straight to the heart of Hinduism and because it is used with consummate artistic knowledge and skill.

....The Cambridge Manuals of Science and Literature are likely to constitute before long a big library. We have previously mentioned several of these little but thoro and scientific forty-cent volumes, and here are five more edited in England and issued here by G. P. Putnam's Sons. They are *The Modern Locomotive*, *The Natural History of Clay*, *Earthworms and Their Allies*, *The Migration of Birds*, and *Prehistoric Man*. As an example of the value of the whole series we record that Dr. Duckworth's treatment of the last subject covers all the main discoveries of the bones of prehistoric man from the Javan Pithecanthropus and the large discoveries in Europe during the last ten years, with outline figures of skulls.

....The Concordance Society's second publication is *A Concordance to the Poems of William Wordsworth*, edited by Prof. Lane Cooper, of Cornell (Dutton; \$12.50). A large quarto of 1136 double-column pages, well printed, and containing some 211,000 quotations, this book is a monument to its editor's scholarship and thoroness. The basic text is the Oxford Wordsworth. There is no room left for doubt as to whether the poet thus honored is a classicist or a romanticist

when we find here 1,200 iterations of *I* and six pages of *me* and *my*. *Love* is entered 1,200 times, *think* and *thought* together only 1,000. There are more than four long pages of *heart* and less than one and one-half of *head*—including the heads of lilies, beacons, mountains, ponies, guide-posts, etc., to say naught of mast-heads and head-stones.

....In the introduction to the eight-volume *Correspondance générale de Chateaubriand*, of which the first volume has just been issued (Paris: Honoré et Edouard Champion; 10 francs) M. Louis Thomas exclaims at the fact that, for a century after the *Génie du Christianisme*, there has been no kind of edition of Chateaubriand's correspondence. The work now issued thru the enlightened house of Champion makes, he confesses, no pretense at including René's "complete correspondence." One never knows if a correspondence is complete: even today savants are still unearthing and publishing "inedited" letters of Voltaire. There is, all the same, no doubt that the present edition, which is, besides, beautifully printed, with a minimum of critical impedimenta, the "instrument of work and source of documents for literary and political history" which its editor hopes it may prove. The author of the *Mémoires d'outre-tombe* "gives himself more fully, without pose, without trimmings." Of the 400 pages of letters now published, the first bears the date 1789, the last that of 1817. Thus revolution, emigration, empire and restoration are all represented: the first two periods very scantily.

....There is much intelligent analysis and criticism in William Archer's book, *Play-Making*, published by Small, Maynard & Co.; and probably the two dollars which it costs will not deter intending Ibsens and mute inglorious Molières from carrying it off to their hall-rooms, there to devour it in lieu of a good dinner. Yet perhaps the dinner would be the wiser investment. He who dines is often rewarded for keeping his eyes and ears open, if he dines with his fellows; and knowledge of life comes before knowledge of technique, as Mr. Archer is the first to confess. One may suspect that the dearth of intelligent plays which we all lament is due less to the want of technical training, administered by Professor Baker of Harvard or Mr. Archer of London, than to loose-end methods of thought, ignorance of fundamental human nature, and silly imitation of silly imitations, and no book can cure any of these diseases. Sir Arthur Pinero is a good workman; sometimes Mr. Jones is almost his equal; in America Augustus Thomas and even Eugene Walter are, at their best, men of the

theater. Yet very little modern play-writing rings true, and the most notable of our producers, Mr. Belasco, depends for most of his performances not upon vigorous drama, but upon meticulous stage-carpentry. It is a sign of the times. Never was the theater more talked of: and never did it offer less excuse for serious discussion. We class Mr. Archer's well-written guide to play-writing with the work of the Drama Leaguers here in America: it gives formal expression to the popular demand for theatrical entertainment, and the popular demand for some share in the game; it would raise the standard of such entertainment, and it is, in the last analysis, altogether futile.

....The author of the *Histoire de la Littérature Française du Romantisme à nos jours*, newly issued by the publisher Grasset of Paris, finds it unnecessary to devote more than one paragraph of all his 320 pages to René Bazin, whose novel *The Children of Alsace* ("les Oberlé") has just been given an edition in English. What M. J.-H. Retinger, the author of the new *Histoire* cited above, does say of his fellow-countryman is well worth reading. He begins by praising a certain "odor of the soil" emanating from M. Bazin's books, and

"descriptions which recall I don't know how the dried leaves we find by chance between the pages of books read in times past."

This is, he continues, perhaps the sole merit of the novelist, in spite of his work's "high probity and indisputable morality."

"He is ambitious to regenerate the people by his novels. But can a work of art become, today, a weapon, even for the best of fights? Is that its rôle? I honor M. Bazin too much as a man to speak of him as an artist."

M. Bazin is a "best seller," in his own land, at any rate. He is, all the same, and in spite of whatever criticisms we may quote at his expense, a novelist of solid merit, who constructs his work conscientiously, and who interests us, in spite of his old-fashioned air and his didacticism and his failure to create a quorum of characters convincing in themselves. In *The Children of Alsace* he paints a family of French ancestry whose father and husband has, from commercial and social ambition, accepted the German regimen and all which that implies. This house is divided against itself. Perhaps there is symbolism in the sad romance of the Oberlé household: grandfather, mother and son (all of lively French sympathies), father and daughter (Prussianized). The issues involved have a high degree of actuality at the moment when the Kaiser threatens to smash the constitution of the Lost Provinces "into little bits." (*The Children of Alsace*. By René Bazin. New York: John Lane Co.; \$1.30.)

Pebbles

MAUD—That story you told about Alice isn't worth repeating.

Kate—It's young yet; give it time.—*Boston Transcript*.

"Do you remember old Judge Plunks?"

"I'm sorry that I cannot recall him."

"You remember him, all right."—*Puck*.

AN authors' union may not be practicable, but those who send manuscripts to magazines ought at least to be eligible to the waiters' union.—*New York Evening Mail*.

MRS. PROUDMAN—Our Willy got "meritorious commendation" at school last week.

Mrs. O'Bull—Well, well! Ain't it awful, the number of strange diseases that's ketched by school children?—*Tit Bits*.

THE new millionaire's banquet table was spread, and the guests about to be summoned.

"Are you sure there are no reporters present?" anxiously asked the host of the butler.

"I've made certain of it, sir."

"Then go out and get a few," rejoined the host.—*Canadian Courier*.

THE temperance orator was waxing eloquent.

"What," he demanded, "what causes more misery than liquor?"

"Thirst," responded a husky voice from the rear of the hall.—*Cincinnati Enquirer*.

BALLADE OF POETS' ALLIES.

And Swinburne hurried back to the house to get his riming dictionary.—THEODORE WATTS DUNTON.

Often the Muse comes to time,
Sometimes my pleadings are vain;
Fancies ethereal, sublime
Hobble and halt with a sprain.
Syllables show their disdain,
Rimes their appearance delay,
Then I invoke in my pain
Gummere, Walker, Roget.

Walker attends to the rime,
Roget's on hand to explain,
Gummere's drafts soothe and I'm
Raised to a rarefied plane.
Hitched to a star in my wain,
Trope and cæsura ne'er stray,
Lords of Apollo's high train—
Gummere, Walker, Roget.

Verse smiths whose last sorry dime
Knows not prosperity's chain
Haunt the Parnassian clime
Seeking its favors to gain.
Hopes are oft shattered in twain,
Life is ineffably gray
Till come those aids to the brain—
Gummere, Walker, Roget.

L'ENVOI.

Long has the Stagyrte lain,
Mingled with classical clay,
While the bards toast 'em again—
Gummere, Walker, Roget.

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Mr. Taft's Candidacy

AT the close of an exciting canvass in his own State, Mr. Taft won only 8 of the 42 district delegates. The 6 delegates at large may hereafter be added, but he can have not more than 14 out of the entire number of 48 representatives of the Republican party of Ohio in the national convention. The remaining 34 and possibly 40, will support Mr. Roosevelt. A great many Republicans did not vote. Some of them, we presume, were restrained by profound dissatisfaction or disgust. We are told that many farmers voted for Mr. Roosevelt and opposed Mr. Taft because of the latter's reciprocity agreement with Canada. If that agreement had been made effective, the protective duties upon certain farm products, when imported from Canada, would have been reduced. But Mr. Roosevelt would have had them entirely removed. In his letter to the President he said:

"It seems to me that what you propose to do with Canada is admirable from every standpoint. I firmly believe in *free trade with Canada*, for both economic and political reasons."

Free trade, of course, would have been more objectionable to the farmers

than the reciprocity agreement. Still, on this issue, it is asserted, they voted against an Ohio President and for Mr. Roosevelt, who had been telling them that this Ohio President was a man of flabby intellect, a hypocrite, the consenting tool of dishonest bosses, the promoter and beneficiary of fraud.

This reverse in Ohio was a hard blow to Mr. Taft's candidacy. We do not seek to minimize the force of it. But it does not necessarily prevent Mr. Taft's nomination. He asserts that he already has 570 delegates, or 30 more than a majority, and there are only 58 more to be chosen. Many of those who are counted for him, however, are affected by contests, and others are believed to be unstable. There will be desertions. It is expected that a majority of the decisions of the national committee with respect to the temporary roll will be in his favor. But the committee's decisions cannot be predicted with certainty. The nomination may depend upon the action of uninstructed delegates heretofore counted on his side. It is probable that he will have a bare majority on the first ballot and that Mr. Roosevelt will then have almost as many. Mr. Roosevelt asserts that the majority will be his.

There has been talk about a compromise in favor of some one not now in the field. In this talk no one but Justice Hughes has been named. Senator La Follette cannot be nominated. We see no evidence that Senator Cummins could get a majority of the delegates. If the friends of Mr. Taft should seek another candidate, they might be willing to vote for Justice Hughes, but to many of Mr. Roosevelt's supporters he would not be acceptable. Mr. Roosevelt himself is not thinking of a compromise. At Dennison, Ohio, last week, he said:

"I will name the compromise candidate. He will be me. I stand for myself as the original candidate and the compromise candidate. And as for the platform, we will accept a compromise by taking the whole platform."

Mr. Taft sees in the recent public utterances of Mr. Roosevelt indications of a purpose to bolt the ticket, if the committee should reject the Roosevelt contestants and if the President should be renominated. These utterances permit such an inference. On the other

hand, Republicans are forming anti-third term clubs. Senator La Follette said, last week:

"No party ever nominated a man for President who has said the things that Roosevelt has said about Taft, or that Taft has said about Roosevelt, and no party will make that kind of a nomination unless it wishes to bargain for defeat at the outset."

He believed, he added, that he himself was to be the nominee. If he really thinks so, he deceives himself. But if Mr. Taft or Mr. Roosevelt should be nominated, it is difficult to see, as we said some time ago, how either of them could support the other, or how the earnest followers of either could take that course. Each has declared again and again that the other is unfit to be President. Mr. Roosevelt says that the President stands for government by oligarchies, has been the willing tool of bad men, has suggested fraud and profited by it, is guilty of mendacity and the grossest hypocrisy, and is disloyal to every canon of ordinary decency. Mr. Taft says the ex-President has repeatedly told falsehoods about him, that his purpose is to wreck the party, that he lightly regards constitutional principles, is impatient of legal restraint, and does not understand what liberty regulated by law is, and that his election for another term would subject our cherished institutions to a severe strain. So bitter has been the contest between the two Republican factions that the gap which separates them is almost as wide as that which lies between the two great parties.

We have held that Mr. Taft is entitled to a renomination and that his party should give it to him. We think that he and his friends should continue to seek that renomination and we are glad to hear that he is steadfast in his course. It is his duty, in the face of all obstacles and without regard for a prospect that may seem discouraging, to uphold his candidacy—his duty to himself, his party and his country. Heretofore we have shown why, in our judgment, he has earned a nomination for another term. His record in office has not warranted a withdrawal of the following remarks about him, made three and a half years ago by Theodore Roosevelt:

"I do not believe there can be found in the whole country a man so well fitted to be Presi-

dent. He is not only absolutely fearless, absolutely disinterested and upright, but he has the widest acquaintance with the nation's needs, without and within, and the broadest sympathies with all our citizens. He would be as emphatically a President of the plain people as Lincoln was, and yet Lincoln himself would be no freer from the least taint of demagoguery, the least tendency to appeal to class hatred of any kind. . . .

"The true friend of reform, the true foe of abuses, is the man who steadily perseveres in righting wrongs, in warring against abuses, but whose character and training are such that he never promises what he cannot perform, that he always a little more than makes good what he does promise, and that, while steadily advancing, he never permits himself to be led into foolish excesses which would damage the very cause he champions. In Mr. Taft we have a man who combines all of these qualities to a degree which no other man in our public life since the Civil War has surpassed."

By withholding from Mr. Taft a renomination the Republican party would make itself ridiculous, virtually repudiating the work of his Administration and saying that the party's record at Washington for the last three and a half years has been one of failures. He should not give up the fight, unless the convention forces him to do so. If the Republicans of the United States choose to reject Mr. Taft and thus to mark him as the first of their Presidents to be so humiliated, they should be required to do it in the open convention. And if they prefer Mr. Roosevelt, it is there that they should say that in the man who so misrepresents and abuses Mr. Taft has been found for the first time an American worthy of honors not given to Washington, Jefferson or Grant. THE INDEPENDENT is utterly opposed to a third term for Mr. Roosevelt or anybody else.

Nothing But the Tariff

IF we may listen to the Democratic unison of voices, there is but one master devil in American politics, and that is the tariff. Remove the protective tariff and every other evil will take docile leave of public life. The harmony on this subject is bewitching. We wonder if they believe it. The followers of Henry George have accepted with no more credulity the teaching of "Progress and Poverty," that the love of the unearned increment is the root of all evil, than do our Democratic leaders

agree to declare that the tariff is the one venomous dragon which Saint George must slay.

We read the issue of a single day's utterances and we find first the Democratic Governor Foss, of Massachusetts, himself a receptive candidate for a higher office, saying in a letter to the *New York Times* that Democratic success is certain, irrespective of quarrels in the Republican party, "because the Democratic party will devote itself harmoniously and exclusively to the platform of honest tariff revision." So he concludes:

"That is the issue on which a Democratic President can be elected next November. Taft has failed on this issue. Roosevelt has shirked it, preferring to attack the railroads or any other interest out of which personal notoriety could be secured. The country recognizes that the only hope of tariff reform is thru the Democratic party. The tariff is the issue. The candidate must fit it. The party must not deviate from it. Then victory is assured."

The victory may be assured, for the Republican dissension has been so unfortunate that Democracy is likely to win, whether as a Presidential candidate it selects a living lion or a dead dog; but we fail to see that the tariff is the issue that most concerns the people. To be sure, Mr. Roosevelt dodges it, and the Democratic House of Representatives is trying to put President Taft "in a hole" over a series of revisions of the tariff; but insurgency in both parties is talking of certain other evils much more than of the tariff. Very possibly Governor Foss believes that it is of little use to smite at their hydra heads, for they all spring out of the one engorged tariff neck, a sharp blow on which would decapitate them all at once.

Governor Mann, of Virginia, sings the same song, or, rather, curses the same monster. The people, he tells us, are tired of "special privileges enjoyed by protected manufacturers." And he continues:

"They are alive to the fact that the rights of the laboring man have been used, not for his protection, but for the protection of the employer, as illustrated by the tariff on cotton and woolen goods and the wages paid for their protection. They will not permit the guarantee of profits to the manufacturers, which the Republican party, by the tariff, now gives, and promises to continue, while it is

withheld from the farmer and every other business and profession."

Equally with the Governor of Virginia it is the tariff, the tariff only and all the time, that is the fount and origin of all evils.

On the same day that these two Democratic Governors declared that opposition to the tariff is the one slogan of their party, Governor Wilson, the Democratic Governor of New Jersey, and a prominent candidate for the Presidency, expressed himself in much the same way. The tariff he put supreme "before every other question":

"There are special circumstances in the United States which put the question of the relation between politics and business before every other question. These circumstances arise out of the way in which we have handled the tariff question."

So the tariff, he said, controls politics:

"Those who get the tariff favors spend a part of their profits in maintaining the political organization of the party thru whom the favors are obtained. . . . Emancipation will begin when the tariff is impartially revised, when the foundations of monopoly are cut away, when the law speaks out its meaning in unmistakable terms and is unhesitatingly enforced against every effort to throttle free enterprise and break down the initiative of average man."

On the side of the Republican leaders, however, the tariff is almost wholly ignored. It was enough that the platform of 1908, and President Taft following it, refused all amendments of the tariff until a scientific study of the cost of production elsewhere had been made, so as to protect the American artisan against the competition of cheap labor abroad. Laying the tariff aside, other topics interest the leaders and the candidates who invaded New Jersey on the same day that Governor Wilson and the two Governors quoted above made their utterances. Senator La Follette definitely brushed the tariff aside when he said in a speech at Trenton:

"Neither the currency nor the tariff is the issue of this, the most important campaign since the Civil War, but the grasp of corporations on the nation."

Here Mr. La Follette for once speaks for both Mr. Taft and Mr. Roosevelt, for both dodge the tariff and both of them would agree with him in the supreme importance of curbing the corporations and protecting men rather

than money, so far as the two can be separated. What the insurgent Republicans talk about is what they call the democratization of politics, trusting the people, demanding the initiative, referendum and recall, and the popular primary nominations; and they differ from the supporters of Mr. Taft in scarce anything, so far as is evident to the naked eye, except in the recall of judges and judicial decisions, which Mr. Roosevelt continues to defend in his latest speeches. He will not wait for orderly amendments to constitutions, but demands that if any enactment is decided unconstitutional the people should have the right to confirm it immediately, whatever the Constitution may say. It is these questions, nearby and visible, which the Republican leaders are considering, while the Democrats bundle them all into the tariff coffin, and assure us that when we bury that we shall bury all else which delays the Golden Age when "the herds shall no longer fear the great lions" and "the ancestral virtues shall dominate the peaceful world." May the spindles of the Fates hasten the day! Meanwhile we hesitate to believe that the tariff issue offers a sufficient battle-cry for the Democratic party, and we fail to see why it should be ignored by the Republican party. Taft as truly as Roosevelt or La Follette is the representative of democracy, but a democracy that does not go to the extreme of the judicial recall which Mr. Roosevelt desires.

The Compromises of the Socialist Convention

THE Socialist party is learning to play the political game. It has been easily recognized by the intelligent press that the recent convention was animated thruout by "an enthusiasm for compromise," as one paper has it. In the chorus of approval that has been given to this tendency of the Socialists to become more like the older parties, however, the full significance of the compromises upon which the new party now rests has been lost.

These compromises are four. The question of the relation of the party to the labor unions was, as we have previ-

ously indicated, "solved" by a resolution so broad and ambiguous as to satisfy both Mr. Gompers's American Federation of Labor and Mr. Haywood's Industrial Workers of the World.

Three other equally important matters were referred back to the special committees that reported them, tho all three have been discussed at length both at Indianapolis and at the Chicago convention two years ago. One of these, the Asiatic exclusion question, was handled at length in THE INDEPENDENT two weeks ago. The present failure to meet that issue throws the party back on the compromise of 1910: exclusion of the present Asiatic immigration, but not on the ground of race. Exclusion had to be supported to please the Federation of Labor, but the reason for it must not be opposed to the doctrine of international fraternity.

The land question was also referred back for the second time. But there is a plank in the new platform that demands the taxing away of the unearned increment of land, held "for speculation or *exploitation*." Taken with other planks, this position may catch a considerable part of the farmer vote in Oklahoma, Texas and other States. The party has repeatedly shown that it means by "exploitation" the hiring of wage labor, but as there is nothing explicit on this point in the platform, this fact will cost few if any votes among the employing farmers.

The attitude to be taken toward commission government in cities was also left for future decision. This involves the party's attitude on non-partisan primaries and other advanced democratic reforms which might threaten what Mr. Berger frankly calls the "Socialist machine." Where the commission form is already in use, Socialists almost of necessity favor it. Elsewhere they are, as a rule, opposed, sometimes because its provisions for the recall and direct legislation are not radical enough for them, but also fearing its effect on their organization.

Even the compromises balance one another almost scientifically. The position on Asiatic exclusion is fairly satisfactory to the Debs men, who would admit Asiatics and every one else, but also allows

the followers of Mr. Berger, who would exclude Asiatics only, to save their face. The position on labor unions, in its ambiguous endorsement of "industrial unionism," which may mean anything, is by no means all the conservatives could have desired. But it must be taken in connection with the provision that those who advocate "violence," "crime" or "sabotage" must be expelled from the party. This latter plank was generally taken as a complete defeat for the radicals. But even here they were given every opportunity to stay in the fold. Representing the Industrial Workers of the World, they were eager to deny that they wanted the party publicly to advocate "crime," "violence" or "sabotage" (for they cannot afford to have any more of their members in jail), and they claimed that they opposed the resolution on the ground that it suggested that members of the party had openly advocated such measures in the past. This resolution was a defeat for the ultra radicals, but taken in connection with the labor union resolution and the failure to adopt the conservatives' proposal of Asiatic exclusion "on race grounds," it was by no means a crushing blow.

If, however, we note that Debs secured 165 votes for the Presidency to 56 for Seidel, we can see that the "principle of compromise" was preserved to the end. Debs is a radical beyond cavil, even if less revolutionary than Haywood. But Seidel was preserved as Vice-Presidential candidate.

It is doubtful if either of the older parties can show an instance of equal partisan "harmony" either as to platform or candidates.

The Menace of the Monroe Doctrine

THE current report that Mr. Roosevelt asked President Taft to appoint him major-general of cavalry in case of a war with Mexico does not quite befit the Nobel Prize for peace, and we decline to believe it. Fortunately, there was no war with Mexico or Japan, and the former commander-in-chief of all the military forces of the United States retains the title of mere colonel. The President could have assured the peti-

tioner that there was no likelihood of war, and no reason for war.

Our Department of State has acted admirably in the presence of the late disturbances in Mexico, as it did in the previous revolution to which we have referred. It is fortunate that we have had an Administration that desires peace and knows the evils that would follow war. The time is approaching, if it has not already come, when our emphasis upon the Monroe Doctrine gives some little anxiety to our American sister republics. Mexican factions may fight each other, but if we should cross the border to protect the interests or lives of our own citizens or those of foreign nations, the warring parties would unite immediately against us. Doubtless we would gain the victory easily enough, as wars go, but it would be a very unfortunate campaign for us. We might take more territory and create more States, or even wipe Mexico from the map, but nothing could prevent the public impression that we had fought, not for duty or honor, but for greed of possession. Or if we withdraw, leaving Mexico unmutated, we should for generations have the ill will of our Southern neighbor.

But the chief concern we should keep in mind is the effect which any unhappy intermeddling with a neighbor's internal affairs would have within the republics of South America. Three strong nations are there growing up, if they have not already arrived—Argentina, Chile and Brazil. Any one of them is strong enough to be able to protect itself against any likely invasion. It is for our interests to keep on the best of friendly terms with them. They are naturally suspicious of a nation like ours, which has undertaken to give them a patronizing protection. They have needed it, and some of these republics, particularly the smaller ones, may need it still; and yet the day of it is passing by, with the era of approaching peace and arbitration. Our Department of State has no little task as well as duty in hand to keep the Latin republics assured that our protecting hand is not a heavy hand. In the old days of colonial Indian wars a merchant in Maine, if we remember, was killed by the Indians because he insisted in putting his hand on the scale

in which he was selling goods to the Indians in exchange for their furs, he said his hand weighed a pound. After killing him they cut off his hand and weighed it, and found that it did weigh just a pound. He should have kept his hand off to avoid suspicion, and so should we.

It is of the first importance that we keep the good will of our southern neighbors. We are just finishing the Panama Canal, and we have the right to expect a great increase in our South American trade. Europe has it nearly all now, and, thanks to our Monroe Doctrine, these southern republics have no fear of Europe; they only fear us. It is our policy to keep out of mischief; to allow revolutions to run their own course to let these nations stew in their own juice if they choose it; and only in the last resort to interfere. It is better to have every American citizen who feels himself endangered leave a country that is in revolution. Our people have entered into business in Mexico knowing what was the risk. We can conceive circumstances, in which for the sake of protection of life or for pure philanthropy's sake we might intervene, but such a case is so extreme that we need not consider it. The case is different with Cuba. There we have more right to insure peace. We gave Cuba her freedom; we generously gave her the right of independent self-rule, if she was able to exercise it. When she attempted a revolution we sent our army and imposed peace, telling her not to do it again, on penalty of our permanent occupation. We gave the little republic a new chance, still under our wing, and we hope she will improve it. Just now it once more looks as if we might be compelled to make Cuba ours as is Porto Rico. The President has lately given warning once more, but in the form of congratulation over ten years of independence, with the hope of permanent peace, such as is now threatened by a fresh uprising. Again the President sends a force of marines to watch events there, just as he sent troops to the Mexican border, but not with a view to intervention. Should we be finally compelled to intervene once more, the continental republics could not object,

any more than they object when the little republic of Panama asks us to supervise her election, or when the republic of Santo Domingo asked us to straighten out her financial affairs. But perhaps the best way in which we could assure these Latin republics of our absolute justice and good will would be by consenting to refer to arbitration the claims which Colombia makes against us.

Conspiracy Against Foreign Governments

WE have previously criticised the Dillingham bill before Congress for its proposed exclusion of immigrants who are unable to read and write. We have shown that such exclusion does not shut out criminals, for the criminals are not illiterate. We have also shown that the illiterate immigrant has good and valuable working hands and will add wealth to our country. The illiterate negro slave was worth a thousand dollars. We have also shown that the illiterate immigrant is soon replaced by his children instructed in our schools, and speedily assimilated into our institutions and traditions. It is, we have said, selfishness and a sordid policy which would hold all the chances for those who already have them here, as if new comers would not make new chances as well as new wealth.

We would now call attention to another evil in the bill imported into it by Senator Root's amendment. The purpose of that amendment is a good one, for it is meant to prevent Mexican adventurers crossing our border to stir up revolutions in their own country. This amendment makes it an offense punishable by deportation for any alien to take advantage of his residence in this country to conspire with others for the violent overthrow of a foreign government at peace with that of the United States. That sounds innocent enough, but it has applications that need to be considered carefully; and we are not surprised that it has aroused great opposition, and a public meeting in Cooper Union in this city was crowded with protestants.

We are in the habit of making a distinction between political offenses and criminal offenses. We deport murderers

and thieves, but not those who are plotting revolution or have taken part in one. That is a distinction recognized in other countries as well. The persons sentenced in London for conspiracy to smash windows urged in their defense that theirs was simply a political offense, and that therefore they should not be punished as guilty of malicious mischief. We have long boasted of our country as the refuge of the oppressed of other lands fleeing from imprisonment and death. After the uprisings of 1848 in Europe a multitude of refugees came to this country and were warmly welcomed. We fought "mit Sigel" in our Civil War, and we made Carl Schurz a member of the President's Cabinet. Such men were Kossuth and Garibaldi, political refugees in this country; and Kossuth went about the land preaching sedition against the rule of Hungary. We would not send them back for trial because they had violently attacked their governments, nor would we have done it if they had continued to conspire against it after coming to our shores. We would forbid filibustering expeditions by natives or aliens, but not consultations and conspiracies. In Europe refugees and conspirators have found similar refuge in England, France and Switzerland.

There is really but one government now in Europe which such a law of exportation would seem to favor, and that is Russia. We have a multitude of immigrants who have fled from Russian oppression. It was they who filled Cooper Union. The treatment of Jews in Russia is barbarous and inhuman. It is not strange that our country sympathizes with them and not with the rulers of Russia; and we have shown our displeasure by denouncing the treaty with Russia. To conspire against the Russian Government is merely a political offense, an attempt at revolution, such a revolution as we cannot condemn. It is our business not to allow any overt act of violence to be taken on our shores, no expedition to be sent, no arms to be smuggled out to aid revolutionists, but there is no reason why Russians should not here in safety consult how they can go back to Russia and start a revolution, or aid one that has been started. It is not our business by our police depart-

ments to assist Russian spies, and send back such conspirators to be imprisoned or put to death, on the decision not of a court, but of an immigration official.

We have neutrality laws that are strong enough. We do not want men to come here to plot assassinations or to make bombs, or to start expeditions, but we will not have it appear that we sympathize with tyranny anywhere, or that we punish those who plan its overthrow.

Jeanne d'Arc

THREE weeks and three days ago there was inaugurated at Orléans the fête of the 483rd anniversary of the deliverance of the city, and of the five hundredth anniversary of the birth of Jeanne d'Arc. On May 7 high mass was celebrated in the cathedral by Cardinal Amette, Archbishop of Paris, grouped with whom were Cardinal Luçon, Archbishop of Reims; the archbishops of Bourges and of Rouen; the bishops of Orléans, Blois, Beauvais, Amiens, Saint-Dié, Quimper, Meaux, Nevers, Verdun and Moulins. On the same day the Archbishop of Rouen blessed the monument to Jeanne in the cathedral.

This array of priestly names recalls another great roll of church potentates, remembered for its association with the Maid's history. Four hundred and eighty-one years have elapsed since that black day in Rouen when she went to the stake, after an unjust condemnation by the ecclesiastical court made up, in part, of her own countrymen. Here are some of their titles: The bishops of Noyon and Beauvais; the abbots of Fécamp, Saint-Ouen, Jumièges, Bec, Corneilles, Preaux, and Mont St. Michel; the priors of Longueville and Saint-Lo. There were also twenty-eight Masters and Doctors of Theology, a host of secretaries and clerks and the malevolent British ecclesiastics—Beaufort, Bishop of Winchester; Louis of Luxembourg, brother of the infamous John, and "Cardinal of England"; the bishops of Ely and Norwich; the Abbot of Mortimer. In her lifetime, Jeanne's fame was celebrated only by laymen—and by at least one poet of her own sex. Christine de Pisan sang of her:

"By Esther, Judith and Deborah, women of high esteem, God delivered His oppressed people.

... But Jeanne is above all. Thru her God has worked many miracles.

"By a miracle was she sent. The angel of the Lord led her to the King."

This miracle is appreciated today by the Church which Jeanne loved, and which betrayed her thru its unworthy servants. She has been beatified. She is honored on the very scene of her martyrdom. But before the Church "rehabilitated" her she had become the heroine of poets and dramatists of all nations, and the purest incarnation of French patriotism. There is today strong evidence that the Maid never dictated or signed the puzzling abjuration which was the one blot on her record; but the poets believed in her before the "scientific" historians. She who "loosened the cord which pinioned France," who "brought peace to a land laid low by war," stood for more than militant womanhood. She fought only at God's command, and fought for her fatherland of men and women alike. Thanks to her alone, many of the names of her contemporaries are known today. Theodore Roberts has expressed this in the opening stanzas of his fine poem, "The Maid":

"Thunder of riotous hoofs over the quaking sod;

Clash of reeking squadrons, steel-capped, iron-shod;

The White Maid, and the white horse, and the flapping banner of God.

"Black hearts riding for money; red hearts riding for fame;

The Maid who rides for France and the king who rides for shame;

Gentlemen, fools, and a saint riding in Christ's high name."

Beatification can mean very little when one has ennobled a sordid century—the century of Louis XI and that brilliant cut-throat, Maître François Villon!

Ransacking the World

IN 1862 the National Government began to create and endow farms for experiments. The first was located near Washington, and is still in use, as a hub to the enterprises undertaken by Mr. Wilson and his assistants. Agricultural experiment stations were, however, not a novelty, for one had been founded in Albany, N. Y., by the New York State Agricultural Society, in 1849, and in 1870 an-

other was created as an adjunct to Harvard College.

We have received recently from the Department of Agriculture bulletins covering the importations of plants for 1910. The plants enumerated count up, including previous reports, to the astonishing number of 29,327. All of these are the result of a systematic search of the whole world, for fruit, vegetables, melons, shade trees, nut trees, and whatever else may be of value in the United States. Of course, nothing like a complete examination of this vast number of plants can be accomplished under the direct supervision of the Government. They are intrusted to the experiment farms and stations over the whole country, and even this does not suffice. It has become necessary to select private individuals of known enterprise and ability to examine comparatively, and entrust to them a large share of the work. In this way the whole United States is gradually being dotted with experiment grounds.

Bear in mind that the number given does not include all that are under test. A large addition was made in 1911, and the workers are in the field quite as busy as ever. One explorer, Mr. Frank N. Meyer, is in the region which includes the famous historical countries of Samarkand, old Bokhara, the Oasis of Merv, and Khokan in Russian Turkestan. Mr. Meyer alone has secured a new race of hardy dwarf prunes from the mountain slopes 3,000 to 7,000 feet high. He has found apricots with sweet instead of bitter kernels, and from this high altitude he sends us dwarf varieties of cherries of distinct value. With these come a long list of wild roses, new varieties of almonds and pistache nuts, while currant breeders have their list of varieties enlarged, and melon growers get new sorts that are unusually hardy as well as sweet.

These investigators are directed, wherever possible, to pay special attention to alfalfa, in its almost numberless varieties, peculiar catching power of an enterprise of this sort. The Government is no longer alone in the field. Professor Budd, of Iowa, took up investigations on his own responsibility, but backed by the State, and from his list of imported apples we secured varieties that were far

better fitted for the Northwest and other colder sections of America than we had before. The apple belt was decidedly widened. His work was equally notable for its success in increasing our number of valuable prunes and melons.

At present we have not one man in the country who has been so thoroly successful and so brilliantly enterprising as Prof. N. E. Hansen, now of the State College in South Dakota. He has himself made four trips, including a trip around the world, and the study of plant life in some of the chief deserts of the world, from the Gobi desert of Mongolia to the "Grave of Caravans" in Turkestan. His three trips to Siberia were under the direction of the Department of Agriculture, and the intent was to secure plants from dry regions for trial in our more arid sections.

That one part of his experience which considers alfalfa is alone a marvel, and embodies all that would have been carried on by natural evolution in a full century. He found that even in Northern Europe no one believed that a perfect hardy alfalfa could be found. The European alfalfa was brought from the hot regions between India and the Mediterranean Sea. Mr. Hansen proposed to go to Asia himself and investigate the subject thruout the whole possible alfalfa zone. He found that the blue-flowered alfalfa, with its many modifications, did not extend far northward, but that a yellow-flowered alfalfa could be found growing as far north as Siberia. He sums up his conclusion to American farmers in this way: "I cannot help but believe that this Siberian alfalfa will extend to the Arctic Circle on the American continent." He thinks that hybrid alfalfas will also be found, or made to be adaptable, very far south of where the plant is now in growth. Everywhere he found the alfalfa plant considered to be of immense importance. Everywhere plowing with alfalfa is about the only way of expressing the work of this plant. It runs its roots thirty feet into the ground, bringing to the surface much of value, and taking its food where no other vegetation has been able to reach. American farmers will be certainly delighted to know that while hunting for plants in Siberia he picked seed from

loads of alfalfa hay where the snow was on the ground, and it was never winter killed.

These seeds, brought over by Professor Hansen, are to be tested in every county of South Dakota, under act of the Legislature, and a few plants have been spared for carrying the test to the northern limits of North Dakota and Minnesota. Quite as notable is the work of Mr. Hansen in cross breeding our native plums with the Japanese sorts, also with the Chinese apricot. The sand-cherry has been crossed with the peach, and in other ways our orchard fruits and small fruits have been enriched. We are by no means at the end of this sort of experimental work when we leave the famous grounds of Mr. Burbank. Every young farmer in the United States ought to have an experimental corner on his farm, and when the old fellows retire from market fruits, they should only retire to apply their experience to the improvement of what they have already grown. It is impossible to determine the economic value of new introductions or new creations without several years given to this specific work. Let the old and the young devote themselves to it, while those in the prime of life put the results to a market test.

Returning to the bulletins, it does not need a practised eye to discover that there is something here of interest to every one who owns a blanket's breadth of soil. There is no end of flowers for the lawn, with new shrubbery, and lawn trees adaptable to every latitude of the States. To our Japanese persimmons we find one added five inches in diameter, and practically seedless. Two new kinds of maize come in from the desert region of South Africa, of value to the corn growers. A delicious large yellow raspberry will be welcomed to our gardens. Our leguminous plants, apart from alfalfa, are amazingly increased in number. From India come cherries and peaches and pears and apples. Drought-resistant Chinese pears come from Manchuria. New sorts of pomegranates reach us for our Southern States. Two or three new varieties of seedless grapes are added to the one variety already in cultivation. The soja bean, or soja pea, as it should be called, comes from Man-

churia, ready to increase our admiration of this addition to our list of hay and fodder plants. The object all the time has been to find trees and plants specially adapted to sections of our country that are subject to drought or to severe freezing.

It would be extremely interesting to go more deeply into this marvelous work and describe the exceedingly promising new things that wait upon our agriculture and horticulture. There is a long list of cow-peas, some of them adapted to our Northern States. On one page alone we find three new sorts of wheat, a half dozen varieties of apricots and as many of almonds. Other pages are covered entirely with new watermelons and muskmelons of aggravatingly rich qualities, while new potatoes come from Peru and new cotton plants from Turkey. In fact, the whole world is being ransacked and thoroly beaten up to make American farmers rich, and thru them American life interesting and happy.

Cuba's Protest That there is an insurrectionary movement in Cuba which is endangering property and life appears beyond question; but it is not yet clear that President Gomez cannot quell the revolt within a reasonable time. He does not like it that President Taft has sent a fleet of observation to the Cuban coast to be ready to protect American interests and intervene if necessary. His protest is a vigorous and lively one, and is intended even more to have an effect in Cuba than in Washington. And it has the effect desired in inspiring patriotic fervor for supporting Gomez and maintaining independence. We do not believe that President Taft desires to intervene. He remembers that under the Platt amendment, which is a part of the Cuban constitution, "the Government of Cuba consents that the United States may exercise the right to intervene for the preservation of *Cuban independence*." That is the first condition of intervention specified. Then follow two others, "the maintenance of a government adequate to the protection of life, property and individual liberty, and for discharging the obligations with respect to Cuba imposed by

the Treaty of Paris." The two latter conditions might require annexation, but the first one comes first as a duty, "the preservation of Cuban independence"; and this we assume is what President Taft desires, and not its overthrow. At present we have nothing to do with the reasons the negroes have for dissatisfaction with President Gomez, but we fear they would make nothing by provoking American intervention.

End of a Primary Campaign

In the days before a better George took the British throne Thackeray expressed the general satisfaction in rejoicing that when George IV descended from earth the line of Georges ended. Our country has similar occasion to rejoice that this primary campaign, so far as it is primary, for the choice of delegates to the Republican Presidential convention, has ended. The country has never seen anything like it, and never wishes to again. We do not lay it, at least not yet, to the new primary system, for the Democratic campaign has thus far been a very decent one. Its candidates have not rushed over the country vilifying each other. Only one who has not thus far been an avowed candidate, but who was three times a candidate, has attacked Governor Harmon. We charge no ill motives against either Mr. Roosevelt or President Taft, for we believe they have been actuated in good part by patriotic motives, but that does not justify their wisdom or courtesy. President Taft would have done better if he had refused the advice of his political managers that he personally attack Mr. Roosevelt, and there is no such danger to the republic from the re-election of Mr. Taft as has been asserted. It has all been an unhappy spectacle before the wide world.

Settlement of the Coal Strike

The settlement of the anthracite coal strike is very happy for the miners, and none the less so for the operators, and a damage and loss only to the rest of us who are consumers. The operators simply put up the price to all who use it, as use it they must. We cannot burn wood; there is none to burn. The price of coal is put up twenty-five

cents a ton, which is twice the advance in cost of mining, so that the extra amount the consumers must pay is divided between those who own the mines and those who mine the coal. The leading operators put up the price, and all the smaller operators do the same, and it looks like what the Sherman law regards as an agreement in restraint of trade. There may be no trust, no formal combination, but somehow the result follows just the same, altho the district attorney may not be able to prove it, and may not interfere as in other cases, as when ice and milk were in question. We recall that when following a strike the railroads planned to charge higher freights on interstate traffic the advance was forbidden by the commission in charge, but there does not seem to be any such recourse now. One may well raise the question and refer it to Congress for decision, whether a general law should not cover the control of all businesses that are concerned in natural monopolies, such as railways and mines, so that no rise in prices should be made that is not justified by the additional cost. We cannot object to miners having a fair wage and operators a fair profit; but to make the additional cost of production a pretense for an increased profit to the producer does not seem fair. Such doings help the socialist campaign.

The Retirement of Senator Crane In a certain way Senator Crane reminds us of an earlier Senator from Massachusetts, Henry Wilson, who entered the Senate as the associate of the eloquent Charles Sumner, as Mr. Crane became the colleague of Mr. Lodge. Neither Wilson nor Crane was an orator like their colleagues, and neither had a college education, but both were men of great wisdom and prudence, both men for consultation and decision, whose judgment and tact solved difficulties and calmed passions. Senator Crane makes no stirring speeches, but he has had great influence in committees and counsels, and few men will be more missed in Washington. It is extraordinary that so many of the older leaders of the Republican party in the Senate have voluntarily retired from its membership, and now Mr. Crane follows Mr. Aldrich in refusing re-election.

His withdrawal is a serious loss to Massachusetts and to the country, for we need these quiet, unostentatious business men as statesmen, not goaded by ambition, but devoted to the simple interests of the nation, and whose experience in business gives them special qualifications. After the 4th of next March we shall see in the Senate different men of quite different minds, for the old order changeth, and we may hope that the new will be better, but with some concern.

What Is Ethical? The Atlanta lawyers whose services secured the release of Charles W. Morse, banker, from the Federal prison in Atlanta, are there reported to have received a fee of \$100,000. When asked if this were the fact one of the firm declined to answer saying that it would not be "ethical" to give the amount of the fee, but that a satisfactory fee was paid. It is pleasant to observe such concern for ethics. The pardon was obtained from President Taft, it being asserted that Morse had a fatal disease and could live but a very short time. He may have such a disease, but he has survived it long enough to visit Europe, for his health, and he has now returned to this country. Whether, as reported, he went to prison with property worth two millions we have no means of knowing, but it looks as if a man had been able to escape a full prison term because he was rich enough to pay lawyers a big fee to secure his release on pretenses that turn out to be false. Possibly the lawyers really believed all they told the President, and earned their fee quite ethically—we do not know; and the fact that they are so superlatively sensitive as not to offend ethically by telling the amount of their fee inclines one to hope that all their proceedings in their difficult and delicate matter were equally ethical.

The Young Men's Y. M. C. A. Theology Christian Associations in this country are so numerous, and their secretaries, teachers and athletic instructors so much more in number, that they have had to establish schools for training those who will be employed. Such a

school in Springfield, Mass., has nearly two hundred students. There has been some criticism of their graduates on the ground that they have not been found sound theologically, that their views of the Bible are quite too critical; and a committee was appointed to look into the matter. The result is a report which shows that the instruction is not dangerous to faith and not offensive except to such as hold extremely conservative views. In their investigation the committee asked the students with what views of the Bible they entered the school. Out of 148 who answered the questions, 50 said they came believing in the literal six days of creation; 60 believed the story of the creation of Adam and Eve to be literally true; 70 believed in the Garden of Eden; 40 in the temptation by a serpent; 91 in the Flood as historical; 60 in the Tower of Babel; 25 in the sun standing still for Joshua; 45 believed that the whale swallowed Jonah; and 41 that the Bible was verbally inspired. When so many came with such extreme views it is not strange that those outside who had similar beliefs of the Bible were disturbed at what was taught in the school. The committee say that such extremely conservative views "are not held by any biblical scholar today," and are not taught in this school, where the teaching "is in harmony with the teaching found today in the theological seminaries of the evangelical Churches." At the same time we may be sure that, as the committee says, the teaching of Professor Ballantine, who was particularly attacked, "is not of the type of the radical, destructive school of biblical criticism, but in harmony with the views generally held by biblical scholars today." It is true, we believe, that there are some seminaries which have avoided learning anything new, but they are few. The overwhelming testimony received showed the graduates in their work to be faithful and evangelical, and the trustees refuse to change the course of instruction.

In view of the present commotion at Yale University, aroused by Mr. Owen Johnson's novel, "Stover at Yale," reviewed in last week's *INDEPENDENT*, we were especially interested in the records

of these fortunate juniors who have just been "tapped" by the three famous senior societies, "Bones," "Keys" and "Wolf's Head." From the current *Yale Alumni Weekly* we discover that 35 of the 45 elect are athletes or athletic managers, 10 are devoted to dramatics, and 7 are on the college papers. Scions of the Vanderbilt, Harriman, Cortelyou, Schwab and other such well known families are represented among the chosen, while more than half of the "Keys Crowd" are actors or singers. On the other hand 29 of the 45 stand within the first third of the class in scholarship which makes the scholastic attainments of the society members higher than the average of the class.

It is very late to make a correction of a false statement quoted by *THE INDEPENDENT* several years ago from a leading daily paper in this city, to the injury of the Catholic Church in Chile. As we then read it, apparently authenticated by the documents, very compromising statements as to the condition of the Church in Chile and the criminal extravagance of the Archbishopric of Santiago were exposed in an encyclical from Rome, and an answer by the Archbishop of Santiago. The story was repeated by Secretary Speer, of the Presbyterian Board of Foreign Missions, and when the authenticity of the documents was denied, Mr. Speer made long and careful investigation, and the result he has given in a book on "South American Problems." The documents are an absolute forgery, gotten up for political purposes and confessed as forgeries by the man who wrote them. We much regret having given the story currency.

Mr. Balfour, ex-Premier, declares in a late speech that he expects before a time not far distant, that Great Britain and her self-governing colonies will be united in a common Imperial Parliament. That is possible and reasonable. If Great Britain wants to make war her colonies, which will suffer by it, ought to have a voice in the matter. But in that case there will have to be a devolution in Great Britain itself, probably three local parliaments for England, Ireland and Wales, besides that for Ireland; and the

very proposition for an Imperial Parliament implies a consent for such local parliaments, and first for the Irish Parliament which Balfour and his party are condemning, but less bitterly than in Gladstone's day.

There is no end to the greed of the war demon in times of peace. The German Reichstag has been driven to provide for the addition of a new naval squadron for which three battleships and two cruisers are to be built before 1920 at a cost of from \$24,250,000 to \$31,750,000 yearly, with a corresponding increase in the army. The Reichstag did, however, muster up courage to insist that the additional cost should be provided for by taxes on wealth, not on the poor people who are now taxed to the limit. And now Admiral Mahan tells us that we must build two battleships every year, or the Germans will break down the Monroe Doctrine. Thus Germany and Japan alternate as bugaboos.

The Federal Council of Churches has an interdenominational commission on the Church and Social Service, which asks that the churches accept September 1 as Labor Sunday, and ministers are advised that literature in preparation therefor can be obtained on request. Another activity of the Federal Council is announced, through the generous foundation of Mrs. Elmer Black, of New York, in the engagement of the Rev. Frederick Lynch, of this city, to develop the work of the Council in aid of the peace movement. Mr. Lynch is a New York pastor and editor who has been active in the peace campaigns and represented its organizations abroad.

The Yearly Meeting of the Friends in Philadelphia agreed that dozing in meeting is not a breach of decorum. But a Friends' meeting may be all silence, which will excuse drowsiness. In the churches which have a full vocal program that occupies only an hour of song and sermon only old people should be pardoned for sleeping; in accord with the remark of the visiting preacher at a new church: "The building is new, but I observe you have put in it the old sleepers."

We spoke not accurately when we said May 16 that there is less alcohol drunk per man in this country today than there was a generation ago. That is true of the alcohol of distilled liquors but not of beer and other malt liquors, which are drunk so enormously by a class of our citizens in the cities that it has progressively varied the general average of alcohol consumption largely for two generations.

Dr. Reitman, the associate of Emma Goldman, who was tarred by the Vigilantes at San Diego a few days ago, and driven with her out of town, declares that the Industrial Workers of America and the "direct action Socialists" will take action to punish the men and the city that have interfered with their liberty. The Vigilantes have proved themselves no better than the "direct action" socialists and anarchists, and both sides deserve equal reprobation.

Synthetic sapphires and rubies are gems just as beautiful, just as real, as the rubies and sapphires dug out of the gravel. One sort is made in the earth's furnace and the other in the chemist's furnace. The latter is made out of small gems compacted together, and so like the former that only the most expert examination can distinguish it. Why one should be preferred to the other it is not easy to say, and yet the German jewelers want a law to label those which are the product of human art.

The President refuses to publish the correspondence with Colombia over the Panama secession for fear it would tend to disturb the feelings of the people of Colombia. This fact may give reason to believe that there is some truth in the story that negotiations are going on with Colombia to settle the claim made by her against this country.

The startling statements at first made about the loss of life from the breaking of the Mississippi levees were much exaggerated. We are informed that the present data give not more than sixty authentic cases, and the total number of deaths is probably not over a hundred.

Insurance

Texas Compulsory Investment Law

IN an address delivered before the Texas Welfare Commission at Dallas, Texas, a few days ago, Mr. Robert Lynn Cox, general counsel of the Association of Life Insurance Presidents, asserted that the compulsory investment law of that State, enacted several years ago and which requires all life insurance companies transacting business there to invest seventy-five per cent. of their reserves in Texas securities, had completely failed to bring cheap capital to the State, as intended by its authors. Quoting from the statistics of the life companies, he showed that the borrowers on real estate mortgages had paid an average of three-fourths of one per cent. more interest in 1911 than was paid on the same class of loans in 1907. In the neighboring State of Oklahoma, where all the industrial conditions were similar, but in which no such law exists, the average rate of interest on the securities mentioned was, in 1911, one and one-fifth per cent. lower than in Texas. He also made the important point that under the free system of Oklahoma the aggregate loans of the companies to citizens of that State equalled 200 per cent. of their policy reserves.

To men of sound business training, the objectionable provisions of the Texas compulsory investment law are obvious. They become immeasurably so when applied to the investment of trust funds of so sacred a character as are those of life insurance companies. It deprives those charged with the administration of the trust of that fullness of discretion which is absolutely requisite to the demands of safety, and puts in the place thereof the blind, unalterable and arbitrary requirements of a statute conceived in inexperience.

The big Eastern life insurance companies would not voluntarily absent themselves from the rich Texas field if they did not know that the law in question

was dangerous to the interests of their policyholders. We can find the names of but two of these in a list of companies doing an active business there during the year 1910, the total insurance in force being about twelve millions. In 1906 there were about twenty Eastern companies with an aggregate insurance in force of over 200 millions. Their places have been taken by a host of small, young companies which, compared with their predecessors in that field, are comparatively inconsequential in the matter of money supplies for investment purposes.

It is plain that the largest and most serviceable companies will not return to Texas while the compulsory investment law remains in force and, having regard to the statements made by Mr. Cox, it would seem the part of wisdom if it were repealed.

WHILE insurance in this country leads the world in quantity, we must turn to England for novel forms of insurance. A full schedule of insurance against rain was in operation in England last summer, divided into four classes, providing payment for each separate week in which there are more than two wet days; every wet day on which the rainfall exceeds 0.20 of an inch; the second and each additional wet day in every week on which the rainfall exceeds 0.15 of an inch, and every wet day in any four consecutive days on which the rainfall exceeds 0.20 of an inch. These policies came into force on May 1 for all parts of the country except South Wales, the Lake district, Scotland and Ireland, and terminated at the end of September. The exclusions show a clear appreciation of the greater liability of some areas to rain than others.

UNDER a law just approved by Governor Wilson, of New Jersey, casualty companies doing business in that State must furnish the Commissioner of Labor with complete reports of accidents to persons insured by them.

The Net Earnings Tax

CORPORATION net earnings in 1911, as shown by reports concerning the Federal tax on them, were less by \$115,000,000 than in 1910, altho the number of corporations making returns increased by 17,660, or about $6\frac{1}{2}$ per cent. There was not a proportionate decrease of gross earnings. The Commissioner of Internal Revenue points out that this was due mainly to higher wages, notably in the case of railroads, which, he says, seem to have paid larger sums for labor "without a corresponding increase of income, in many instances an actual decrease of income being shown." Net earnings in the Pittsburgh district, mainly those of iron and steel companies, were less by \$47,591,000. This year's tax will be about \$28,278,000, against last year's \$29,432,000. It seems to us that this year, thus far, there are signs that the amount collected will rise again.

Coal Prices and Wages

WHILE the wage increase granted to 170,000 anthracite coal miners was 10 per cent., their net gain was only about $5\frac{1}{2}$ per cent., owing to the accompanying abolition of the sliding scale. To compensate for the additional expenditure required, the companies have added 25 cents a ton to the price of the domestic sizes of coal. It is admitted that this will much more than cover the wage increase. To meet that increase 15 cents a ton would have been sufficient. After payment of the $5\frac{1}{2}$ per cent. addition to the wages, the companies' income will be enlarged, it is estimated, by from \$4,000,000 to \$6,000,000 a year, drawn from the pockets of consumers. A warrant for this, the companies say, is found in the increased cost of machinery, mules, hay, etc., and in recent legislation shortening the workday.

It was to be expected, we suppose, that something would be added to the price. Recent wage increases in the New England textile and writing paper industries have been followed by higher selling prices. The railroads of the country

have been unable to meet higher wages by higher freight rates, because they were restrained by Federal authority. But the anthracite railroad companies have acted unwisely. The addition to the price of coal should not have exceeded the wage increase, ascertained with care and shown to the public. The companies are rich. Their dividends are large; their stock commands high prices in the market. They can afford to pay this wage increase without adding anything whatever to the price of coal. By adding nearly twice as much as the amount of the wage increase they stimulate official inquiry as to their methods and large profits, and suggest legislation for effective control of their operations. The public heartily dislikes what is called the anthracite monopoly and regrets what is regarded as the failure of the Government's suit against it.

....It is expected that the State of New York will receive about \$5,000,000 of inheritance taxes on the estate of the late Col. John Jacob Astor. Large sums will also be paid from the estates of Benjamin Guggenheim and Isidor Straus.

....The Chicago firm of Sears, Roebuck & Co. has undertaken to give \$1,000,000 for the improvement of agriculture, with especial reference to the quality and quantity of grain. At the beginning \$100,000 is to be given, and the use of it will be under the direction of the Crop Improvement Committee of the Council of Grain Exchanges.

....The directors of the Columbia and the Knickerbocker Trust companies have approved the terms of a merger of the two institutions. The new Columbia-Knickerbocker Trust Company will have a capital of \$2,000,000, a surplus of \$7,000,000, and about \$58,000,000 in deposits. Its president will be Willard V. King, now president of the Columbia, and Charles H. Keep, now head of the Knickerbocker, will be chairman of the board. A. B. Hepburn, chairman of the Chase National Bank's board, will be chairman of the executive committee.

The Independent

NEW YORK, THURSDAY, JUNE 6, 1912

No. 3314

Survey of the World

National Politics

Last week's most important primary election was the one in New Jersey, where both Mr. Taft and Mr. Roosevelt had made a vigorous campaign, using the arguments and assertions with which they had addressed voters elsewhere. Mr. Roosevelt had a plurality of about 13,000 and won all of the State's 28 delegates. On the Democratic side, Governor Wilson was successful. He has 24 of the 28 delegates. The remaining 4 represent the opposition of ex-Senator Smith and his associates. About 50 per cent. of the voters went to the primaries. This reverse did not shake Mr. Taft's determination. At the end of the week his friends claimed for him 584 votes in the convention, or 44 more than a majority, conceding to Mr. Roosevelt 427. On the other hand, Mr. Roosevelt's friends claim a majority. The contests before the national committee affect 222 seats, and claims affecting 181 were filed in the interest of Mr. Roosevelt. A demand that new Roosevelt members shall be seated now in the committee has been made, but it is expected that the rules will be followed. As Ohio's 6 delegates at large were still to be chosen at a State convention, as to the control of which there was doubt, Mr. Taft directed that there should be no yielding or compromise by his friends. Mr. Roosevelt also opposed any compromise. Late reports indicate that Mr. Taft will have a small majority in the convention. Opposition to the appointment of Senator Root to be temporary chairman at Chicago was withdrawn by Mr. Roosevelt, who said he had been advised by delegates that the matter was of little importance. Mr. Taft was told that at least 80 of New

York's 90 delegates would vote for him. Speaking at Gettysburg on Memorial Day, Mr. Roosevelt said that just after the war there were foolish people who talked of imperialism and a dictatorship:

"The talk of imperialism was not more foolish then than it is now. I have too much respect for you to tell you that you are in no danger of a dictatorship. When any man tells you that, get him a nurse and a perambulator, for if he really believes it he isn't fit to be at large."

Mr. Bryan says that Mr. Roosevelt will be the nominee of the regular convention or of a bolting one, and that he can be defeated by any good Progressive. "Mr. Clark and Mr. Wilson are the leading Progressive candidates. Either of them can defeat Roosevelt."—Mr. Clark leads on the Democratic side, but Governor Wilson has nearly as many delegates, having added those of Minnesota and Texas to the 24 in New Jersey. Arizona, Montana, Kentucky and Rhode Island voted for Clark last week. About 140 Democratic delegates remain to be chosen. It is said that Senator O'Gorman, of New York, will be temporary chairman of the Baltimore convention.

Congress In the Senate, last week, the House bill revising the iron and steel schedule of the tariff was passed, but with an amendment repealing the ineffective Canadian reciprocity act and imposing a duty of \$2 a ton on print paper. Fifteen Republicans were absent and others who were present did not vote. Only one Republican was counted for the bill. The vote was 35 to 22. It was thought that the amendments would be rejected by the House and that the resulting disagreement would prevent tariff legislation at this session.—Speaking at a Liberal banquet in Ottawa

WILBUR WRIGHT IN FLIGHT AND IN REPOSE

The Father of Flying died on May 30 at his home in Dayton, Ohio. The great aviator had for a month been ill with typhoid fever, followed by complications, and little hope of his recovery was entertained. Wright's reputation as the first practical airman was made in France, and in 1909 he was awarded a gold medal by the French Academy of Sciences. His work with heavier than air machines, in which he was associated with Orville Wright, his younger brother, he dated only from 1903. Before that the brothers worked as printers, and ran a bicycle repair shop. Wilbur Wright was born near Millville, Ind., in 1867, the son of a bishop of the Methodist Church. He was unmarried. Wilbur Wright was famous, not only for his flying and for his flying machines, but for his wise caution as a man of the air, and for his modesty even in his hours of triumph. In this issue of THE INDEPENDENT our readers will find an article on the Progress of Aviation during the Last Year and incidental consideration of the Wright Brothers' work in safeguarding flying. Press despatches tell of a British meeting to raise funds for a memorial, and of the naming of a street in Le Mans, France, where some of his flights were made, in honor of Wilbur Wright.

on the 30th, Ex-Premier Laurier severely criticised Mr. Taft's letter to Mr. Roosevelt concerning the reciprocity agreement, saying he was surprised that the President used the shallow rhetoric of Canada's jingoes. He found Mr. Roosevelt's reply commendable. It was an open secret, he said, that in the reciprocity campaign special interests of the United States joined hands with the special interests of Canada to defeat the agreement, "both singing lustily 'God Save the King,' but also murmuring to themselves, 'God save our monopolies and our Trusts.'" Canada could not be made an "adjunct" of the United States except with her consent, which could not be gained by the proffer of all the United States' wealth.—The Senate, 45 to 11, passed the House bill providing that work on Government contracts shall be done under the eight hour law.—A trust company in Buffalo and a large bank in New York have formally refused to answer the questions sent to them by the Money Trust committee. Other banks have declined informally. It is expected that the committee will seek to compel answers to be given.

Trust Cases In the suit of the Government relating to 950,000 bags of Rio coffee held in New York warehouses and owned by the Brazilian Government and the State of Sao Paulo, the Federal Circuit Court, on the 28th, declined to grant the injunction and temporary receivership which had been sought. On the 27th, speaking at the banquet of the Pan-American Union, Señor Da Gama, the Brazilian Ambassador, sharply criticised our Government for bringing this suit. It was a heavy blow, he said, to "hopes of a new era in our commercial relations." The proceeding was based upon a revolutionary doctrine, and our Government had claimed in court a forfeiture of property owned by Brazil. The action was equivalent to international discourtesy. His remarks were made in the presence of Secretary Knox. While Attorney-General Wickersham says there is no friction between him and the Secretary, it is asserted by many newspapers that the suit was begun without the Secretary's knowledge, and that the latter has urged a withdrawal of it. There were reports

last week that it would be discontinued, and other reports that there would be a new suit, less objectionable to Brazil.—The Government's suit against the Atlantic steamship combination, relating to steerage passengers, is to be tried within a few weeks.—A continued advance in the price of beef, the price now at Chicago being the highest in thirty years, gives weight to a report of the Bureau of Statistics. Packers have asserted in explanation that recent shipments of live stock from the West have been very light. The bureau shows, however, that receipts of live stock at the seven principal markets in April were greater than in any preceding April since 1907, and that receipts for the first four months of the year were larger than those of any corresponding period during the last decade. Consequently, there is a demand for new legal proceedings against what is called the Beef Trust, and a resolution has been introduced in the House directing the Department of Justice to make an inquiry without delay. An investigation will be made by the House Judiciary committee, and it is expected that the Government will sue for a dissolution of the combination.—John D. Rockefeller was a witness last week in a suit relating to control of the Waters-Pierce Oil Company, in which it is alleged that the Standard combination still exists. He asserted that dissolution of it had been completely effected.

Labor Questions The number of hotel and restaurant waiters on strike in New York City steadily increased last week, until about 4,000 men were out. Among the twenty-one hotels affected were the Waldorf-Astoria, Plaza, Astor, St. Regis, Vanderbilt and Knickerbocker. A dozen of the finest restaurants and two clubs were also in the list. All continued to do business. Many vacancies were filled by applicants residing in the city, and a considerable number of negro waiters were brought up from the South. The employers were willing to grant an increase of wages, but refused to recognize the union.—At the trial of Clarence S. Darrow, in Los Angeles, for bribing jurors in the McNamara case, Bert H. Franklin, formerly chief detec-

tive for the McNamara defense, testified last week for the prosecution, saying Darrow gave him money to be used in buying jurors. It was proposed to him, he said, in Darrow's interest, that he should plead guilty to bribery, in consideration of the payment of a fine of \$5,000 and \$3,000 more for himself.—The increase of 25 cents a ton in the price of anthracite coal, following the recent settlement with the miners, has led to an inquiry by the Federal District Attorney at Philadelphia, and a resolution for another inquiry has been introduced in the House at Washington. An investigation will also be made by the Merchants' Association of New York.

Municipal Corruption The employment of William J. Burns, the well known detective, by residents of Atlantic City, N. J., about a year ago, to inquire as to official corruption there, has led to disclosures affecting many persons. Four members of the Council have confessed, in signed statements and in court, that they took bribes for the passage of an ordinance, and it is expected that as many more will be convicted. At least a score of other employees of the city are implicated. To get the proof, Burns used a fictitious project for a million-dollar concrete walk to displace the board walk along the shore front. There will be many indictments. The evidence relates to repeating at elections, other election frauds, the corrupt protection of gambling places and disorderly houses, the purchase of hospital supplies, etc. Burns will be retained for some time to come, and those who employed him will strive to cleanse the city with his help.—Charges made in Pittsburgh by the Voters' League, and supported by religious organizations, have compelled proceedings for the impeachment of three heads of municipal departments.—Mayor Blankenburg, of Philadelphia, has appointed a commission of twenty-one prominent residents (four of them are women) to make an investigation concerning vice in that city.—In San Francisco the last of the indictments against Ex-Mayor Schmitz was dismissed last week, and the court expressed regret that Abraham Ruef was the only member of the old ring who was suffering punishment. Ruef is publishing in a

San Francisco paper the story of his criminal career.

The "Titanic" Report On May 28 the sub-committee of the United States Senate made its report on the loss of the "Titanic." On the same day the chairman of the sub-committee, William Alden Smith, of Michigan, made a speech on the subject. The Senator disavowed "experience or special knowledge of nautical affairs," but held that "very few important facts which were susceptible of being known" had escaped him. He defended the detention of British subjects to secure their testimony, stating that his course was simply "to gather the facts . . . while they were still vivid realities. Questions of diverse citizenship gave way to the universal desire for the simple truth."

Senator Smith commented upon the "mystery" of the "Titanic's" captain disregarding danger "when other and less pretentious vessels doubled their lookout or stopped their engines." The force of the impact must have indicated to Captain Smith the fact that his ship was doomed; blamable, therefore, was the failure of captain and officers to give an immediate and general alarm or to make other than haphazard attempts to save the lives of passengers. In paying a tribute to Phillips, the wireless operator who lost his life, Senator Smith exclaimed:

"When the world weeps together over a common loss, all nations should take steps wisely to regulate wireless telegraphy and see that operators are fairly paid."

Condemning the failure of the "Californian" to learn the facts of the "Titanic" wreck and to save the lives of her passengers and crew, the Senator commented on the fact that the ship was within easy reach of the scene for nearly four hours after her wireless operator knew of the collision. Captain Lord, of the "Californian," is placed, he continued, under "a tremendous responsibility." Senator Smith condemned also the "reign of silence" which was maintained ashore, after the tragedy. He recommended that the lanes of travel be more carefully defined, and more precautions of various kinds adopted by merchantmen. The committee report is largely a review of the evidence and a

recommendation of legislation. Here are some of its conclusions:

Many more lives could have been saved had the survivors been concentrated in a few lifeboats, and had the boats thus released returned to the wreck for others. The lifeboats could have saved 1,176 persons—instead of 706.

The supposedly watertight compartments of the "Titanic" were not watertight, because of the non-watertight condition of the decks, where the transverse bulkheads ended.

The steamship "Californian" was nearer the sinking steamer than the nineteen miles reported by her captain, and her officers and crew "saw the distress signals . . . and failed to respond to them in accordance with the dictates of humanity, international usage and the requirements of law." The mysterious lights on an unknown ship, seen by the passengers on the "Titanic," undoubtedly were those of the "Californian." Eight ships, all equipped with wireless, were in the vicinity of the "Titanic," the "Olympic" farthest away—512 miles.

No general alarm was sounded, no whistle blown, and no systematic warning given to the endangered passengers, and it was fifteen or twenty minutes after the collision before Captain Smith ordered his wireless operator to send out a distress message.

The "Titanic's" crew was only meagerly acquainted with its positions and duties in an accident, and only one drill was held before the maiden trip. Many of the crew joined the ship only a few hours before she sailed, and were in ignorance of their positions until the following Friday.

Some of the committee's recommendations are as follows:

Ships carrying more than 100 passengers should have two searchlights; a revision should be made of steamships inspection laws of foreign countries to the standard proposed in the United States; every ship should be required to carry sufficient lifeboats for all passengers and crew; the use of wireless should be regulated to prevent interference by amateurs; all ships should have a wireless operator on constant duty.

Bulkheads should be so spaced that any two adjacent compartments of a ship may be flooded without sinking. Transverse bulkheads forward and abaft the machinery should be continued watertight to the uppermost continuous structural deck, and this deck should be fitted watertight.

—London's yellow press treats Senator Smith's report and speech as a "violent, unreasonable diatribe," of "amazing ignorance." The speech in especial is termed "grotesque" and made up of "inflated rhetoric."—"The promptness and knightly sympathy" of Captain A. H. Rostron, of the rescue-ship "Carpathia" (we quote Senator Smith) was recognized on May 29,

when a committee of "Titanic" survivors presented to him, at New York, a silver loving cup. Medals were presented to every member of his vessel's crew.—In foggy weather in New York harbor, on the same day, the New York and Porto Rico liner "Berwind," outward bound, rammed the 3,519-ton French liner "Hudson," from Bordeaux. The incoming steamer was able to reach a Brooklyn pier and to land her passengers and their luggage before sinking.—Government regulations which go into effect October 1, and will apply to all German passenger steamers carrying 100 persons (including crew) require that a wireless apparatus, radius of 100 nautical miles, must be carried.—The President of the Board of Trade, Sydney Buxton, has been severely attacked in the House of Commons for "neglect to carry out the recommendations of his own committee" before the "Titanic" tragedy occurred. Among his critics have been Major Martin Archer-Shee, M. P., and Lord Charles Beresford. The Board of Trade inquiry into the wreck of the "Titanic" has been adjourned to June 4. The testimony of the Duff-Gordons brought to its hearings large and fashionable crowds. Lord Mersey, in conducting the hearing, spared Sir Cosmo as far as possible and said: "The whole of this incident [i. e., the alleged refusal of the Duff-Gordons to save the lives of fellow passengers] was only a small affair."—Fire broke out on the steamship "Carmania" in the West Huskisson dock, at Liverpool, the afternoon of June 2. The fire was not checked until great damage had been done to the Cunarder.

The Uprising in Cuba At the end of last week the Cuban Government had made little if any

progress in the work of subduing the negro rebellion, which, however, was confined to the eastern end of the island. Replying to President Gomez's long protest against what seemed to be preparations for intervention, President Taft assured him that only reasonable precautions had been taken to give the Cuban Government moral support, and that intervention was not intended. This appeased the Cuban Government and the Havana press, which had exhib-

ited anger and complained of humiliation. Gomez said he had sent 9,000 soldiers to the scene of disturbance. It was plain, however, that he was not protecting foreign property. The rebels continued to prey upon planters, to burn sugar cane and mills, and to loot the stores in small towns, whose inhabitants fled to Santiago. Property belonging to the Spanish-American Mining Company, at Daiquiri, about 20 miles from Santiago, was destroyed. There was much red tape and correspondence about landing American marines there. At last Gomez gave his consent. Mr. Taft was informed that they landed from the "Paducah" on the 31st, but it now appears that they remained on the gunboat because the rebels had been driven away when they arrived. At Guantánamo 700 marines landed and went into camp. Others were on the way to Cuba, and several battleships assembled at Key West. Mr. Taft sent to Congress a history of the disturbance, with the official correspondence. He holds that additional legislation is not needed to authorize intervention by his order; but Gomez will have time to show whether he can protect foreign property and restore peace. Mr. Steinhart, formerly consul-general at Havana, and recently interested in several large undertakings, says the American capital invested is \$400,000,000, the English capital \$200,000,000, and the German capital \$70,000,000. Estenoz, the rebel leader, says the uprising is due to the law forbidding the organization of a negro party and to the denial of civil and political rights to negroes by the Government and the courts. He will fight, he adds, until the law is repealed. At the end of the week it was reported that 145 rebels (18 of them women) had been slain in a battle. There were rumors of an uprising at Manzanillo and fears of trouble at Havana. The strike controversy with the longshoremen there has been settled. Sir H. H. Johnston, the well-known English explorer and colonial administrator, says a study of the Cuban problem has convinced him that the proper solution of it, in the interest of the United States, England, France, Germany and the Cubans themselves, would be annexation to this country.—On

the evening of the 2d, Estenoz and his men took the village of La Maya, 30 miles from Santiago, and destroyed it by fire.

Mexico's Revolutionists

There was no battle in northern Mexico last week. Orozco and many of his men were in the city of Chihuahua. Huerta was moving northward slowly, rebuilding burned bridges and relaying railway tracks. His attack from the south was to be supplemented by an attack from the west by about 2,000 Federals, who have been near Douglas, Ariz. There were persistent reports in Chihuahua that Huerta had been caught in a trap; that Campa, with part of Orozco's original force, was behind him and had captured Torreon, his base. But these were denied at the capital. It was said that such stories were told in Chihuahua to hearten the rebel soldiers, who were dissatisfied, being out of money and ammunition. Many had deserted. Their hatred of Americans was plainly shown. Orozco himself addressed to the American consul a long protest against the attitude of the United States, which favored Madero, he asserted, but continually wronged the rebels. In this protest there was a covert threat, for he remarked that he might not be able to restrain the Mexican people when they realized the discrimination against the rebel cause. He appears to have been moved by his failure to smuggle ammunition across the line. For the hostility of this protest he was sharply reproved by our Government and required to give safe conduct for Americans who desired to leave Chihuahua. Nearly all of them wanted to go. They feared the angry rebel soldiers and the effect of hostile articles in the local press. Therefore a majority of the Americans left the city and crossed the border. Orozco had compelled the banks to buy his bonds and was buying supplies with scrip of his own manufacture. It was said that two peace commissions had come to him, one from Madero, offering to make him Minister of War, and the other from a group of Congressmen, offering to oust Madero, with his help. But it is also said that these tales were told to encourage his men. Madero said he could not be induced to give up his

office and that he would accept from Orozco or Zapata nothing but unconditional surrender. Americans have been robbed by rebels in Sinaloa, and many have fled to Mazatlan. Mexico has negotiated a loan of \$10,000,000 for one year with Speyer & Co. At the end of the week it was reported that Huerta's rear guard, near Torreon, had been whipped, and that the rebels there had taken 400 prisoners. Later dispatches did not confirm this story.

South and Central America General Pedro Nel Ospina, formerly Colombia's Minister at Washington, published a statement in New York, last week, concerning the controversy about Panama. He believed, he said, that the day was not far distant when this controversy would be settled by the submission of it to the Hague tribunal. Influential members of the United States Congress and representative American newspapers were demanding justice for Colombia:

"Today it would be morally impossible for a self-respecting Administration to ignore the claims of Colombia and to refuse to her alone that which the Government of the United States is offering to all the other nations of the earth—that is to say, the right to have all questions concerning the interpretation of public treaties settled by impartial arbitration. Whatever the personal sacrifices I have made to arouse public opinion in this country, they have been insignificant compared with the satisfaction I feel on seeing the day of justice draw near and knowing that once again, thanks to the American people, right will have triumphed over wrong."

On the same day a Cartagena (Colombia) newspaper asserted that as the result of negotiations at Bogota, our Government had consented to pay Colombia \$30,000,000 and procure for her a loan of \$70,000,000. This was promptly denied by the State Department at Washington.—Riots prevented balloting in Lima and other cities of Peru, last week for presidential candidates. Several persons were killed. The government declared the election null and void.—The greatest snow storm known in Chili for many years has disabled the Trans-Andean railways, which are so deeply buried that it may not be possible to use them again for a month.—The revolutionists in Santo Domingo were defeated,

last week, and one of their generals was killed.—In response to Nicaragua's petition for financial aid, our Government suggests, it is said, that some of the Government's friends should be made to disgorge millions paid in satisfaction of their claims after the recent revolution.

Lloyd-George and the Land Question A speech delivered at Swansea last week by David Lloyd-George, the Chancellor of the Exchequer, on the subject of Welsh disestablishment, is described by the Unionist press as a deplorable outrage: "Vindictive, violent, and vulgar." The Liberal Chancellor asserted the right of Welsh nonconformity to manage its own spiritual affairs without interference from Canterbury or Westminster, and incidentally referred to the land question, which, he said, had been handled as if it were a hedgehog:

"If, in this country, we were as timid in business as we are in politics, instead of having the greatest international trade in the world, we would be today nothing but the coalyard of the German empire."

Mr. Lloyd-George continued:

"The greatest people in England own land which at one time belonged to the poor-paid service of religion. The vessels of the consecrated sanctuary are still on their sideboards. Meat dedicated to the altar stocks their larders today. Go to a Primrose League meeting and look at the platform. One-third of them are probably people who have got Church land. The very primroses which adorn their buttonholes were plucked from land consecrated to the service of the altar, and they have the effrontery to charge us—when we ask that the money which belongs to the poor ought to be returned—they have the effrontery to say we are robbing God."

"I will tell you what is the matter with this country. It is an unlimited monarchy. Here and there are 10,000 little Czars. They hold absolute autocratic sway. Who gave it to them—this trust and property?"

"We mean to examine the conditions of it. It is a fight full of hope for democracy."

"We are asking nothing unreasonable. We are asking nothing we are not fit for. We are not a nation of pirates seeking to pillage. We seek but our own."

—At a bye election in the northwest division of Norfolk on June 1, the Liberal candidate was elected by a majority of 6,481: an increase of over 5,000 above the Liberal majority at the last general election.

The Dockers' Strike at London

On May 28 a deputation of striking London transport workers was received by Home Secretary McKenna. They proposed to assist in unloading and conveying the necessary food supplies for the metropolis. The strikers had not, however, succeeded in preventing the movement of meat, controlled for the most part by American packers, who had been running motor lorries, loaded with chilled and frozen beef, from the water-front to the markets. The Home Office issued a statement denying the allegation that the authorities were employing soldiers and the police in the interest of the employers. Only police had been used in the maintenance of order, but the Government would, if necessary,

"use all the resources at its disposal to insure a continued supply of food to the people of London."

Except for the movement of food, which has provoked jeering, but no violence, the trade of the port of London was paralyzed, and some 140,000 men were on strike. A settlement was hoped for at a conference of the Board of Trade, to be held on May 31, but the shipowners refused to accept the Government's invitation to meet the men. The employers' association is resolved to fight to a finish, and says that the union is short of funds. Five big shipowners, including the Atlantic Transport Line, offer a minimum wage of \$10 a week for all competent men who will deal with them direct, regardless of the union. Last autumn, say the shipowners, two agreements and an award were reached. "All these have now been set aside," no notice was given to the employers before the strike was called, and the employers "have no confidence and no assurance that any negotiations that will now take place will have any greater reality or be more permanent." The main issue concerns the status of non-union labor, the employers insisting upon the maintenance of an "open shop." A report by Sir Edward Clarke states that the trouble is mainly due to failure to carry out the clause in the existing agreement providing that differences be referred to the Board of Trade

for decision. The action of the Continental workers on the British appeal to proclaim a worldwide boycott of British shipping remains in doubt.

The French in Morocco

General Lyautey, French Resident - Governor of Morocco, sent wireless despatches from Fez on May 29 stating that the Moorish capital was practically surrounded by hostile Moors, whose number was subsequently given in unofficial reports as 30,000. General Moinier's edict fining the capital city one million francs for the recent revolt and the massacre of Jews and Frenchmen seems also to have angered the natives, who have not, however, risen or joined the rebels, who have made several attacks upon Fez. These insurrectionaries made an attack on May 28, but were repulsed and left 30 dead on the field. The French had 5 killed and 8 wounded. There were earlier attacks, in which 60 of the French garrison are said to have been wounded. A "holy war" seems to have been proclaimed, and 50,000 natives are said to have gathered in the Taza region. The French troops are not numerous enough to undertake a decisive sortie against these forces, tho their commander deems them capable of defending Fez against all attack. The Sultan, Mulai Hafid, who is regarded by the rebels as a traitor for having accepted the French protectorate, is said to have shown great alarm, but is cheered by the fact that the population of the capital has not joined the enemy. The latter have proclaimed a son of Mal Ainin, a famous religious chief and Sahara sorcerer who died last year, their Sultan. According to the correspondent of the London *Times* at Tangier, certain natives complain that the French have illegally seized and remained in possession of their lands. Experience shows, he continues, the difficulty of a native obtaining justice against Frenchmen, but the French authorities promise a new code of laws within two years' time. A false report current in Madrid represented the Moors as having massacred General Lyautey and Eugène Regnault, formerly Minister to Morocco, with their staffs.

[Our readers have responded generously to our invitation. From north, south, east and west—especially west!—have these letters come; narrative and descriptive letters; letters humorous, pathetic and matter of fact. Our first prize goes to Miss M. Jordan, of Minneapolis, and our second prize to Mrs. Mabel Hay Barrows Mussey, of Croton-on-Hudson, N. Y. We wish that there were room to publish more of the letters which we have received—and prizes for more of their writers. Right here let us refer to the paragraph which we publish on an editorial page with regard to the 1913 Vacation Number.—EDITOR.]

A Factory Girl's Vacation.

WHEN the dismissal bell rang that third of July I climbed down from the high stool where I had been pasting samples since seven o'clock and made my way to the elevator. I was worn out with the noise, the dirt and the foul air, and heartsick

because of the oaths and jests heard all day long.

Tho I knew my face was covered with dust and grime I did not stop to wash at the dirty sink, where fifty or more were already congregated waiting their turn. Instead, I hurried on, conscious of my dusty and disheveled appearance, and also of a disgusting odor of glue. Ladies in dainty attire looked askance at me, and as I stepped on the crowded street car it seemed as if passengers drew away from me with a gesture of repulsion.

The long weary ride was at last at an end. I lived far out in order to get cheaper rent and purer air than can be obtained in the heart of the city. As I entered the little room which I shared with a girl friend, the shadows of twilight were falling. In the gloom I distinguished my friend sitting by the one window which supplied what air and light it could to the stuffy little room.

"Aren't you glad tomorrow is the Fourth?" she inquired.

"Indeed I am," I replied, sinking wearily into a chair.

"Let's go to the country," said Mamie.

"How I wish we could!" I exclaimed; "but you know we cannot afford it."

"I've got it all planned out," continued Mamie. "It will cost us seventy-five cents to get out there and return, but we can earn that picking berries. Here's the advertisement in the *Journal*. 'Pickers wanted, good wages, take Minnetonka car.' Lizzie told me about it. She picked berries all one season. We'll take bread and butter with us and buy milk and berries out there. Just think, neither of us have tasted a strawberry this summer!"

"It will be sure to rain," I said, dolefully.

"Something always happens to spoil any pleasure we might have."

But it didn't. The next morning dawned bright and beautiful. By seven o'clock we were aboard the train and by eight o'clock we were walking swiftly along a country road toward Mr. T's residence.

Mr. T. engaged us readily, for many of his regular pickers had disappointed him, he said, on account of it being the Fourth. His son conducted us to the berry patch and gave us each a crate containing sixteen small wooden boxes—for filling which we were to receive a cent and a half apiece.

"Isn't this some change from the factory?" I asked, looking around at the encircling woods and fields with white farmhouses nestling among them.

"Listen to that bird sing!" she replied.

"Don't stop," I said. "We must earn our fare out here, at any rate."

We worked hard all morning, but work under such circumstances is a pleasure; altho we did get somewhat stiff getting up and down so often. The birds sang to us, the soft winds played about us. I felt as if we had been transplanted to another planet.

By noon Mamie had earned sixty cents and I, fifty. We climbed to the top of the hill to eat our luncheon. There in the shade of a great tree we partook of our bread, butter, berries and a quart of milk which we had procured from a farmhouse nearby. From there we could see the blue lake and a white sailboat skimming its surface.

After an hour's rest we resumed our work. We were the only ones left in the field, as all the other workers had stopped at noon on account of it being the Fourth. At five o'clock when the berries had to be shipped Mamie had \$1.05 to her credit and I ninety-five cents.

"If you want to keep on working, girls," said Mrs. T., "you can have all you will pick, for the ripe berries will be spoiled by tomorrow and it will be all the better for the vines to have them picked."

So we worked away until six o'clock, when we each had another crate full, Mamie helping me to finish mine as I was not so rapid a picker as she was. As this was rather more than we could carry back to the city

Mrs. T. said she would keep one of the crates and pay us for it, as she wanted to make some jam.

We had enough bread and butter with us for our supper, so we bought another quart of milk, and also asked Mrs. T. if she would sell us some hard-boiled eggs. She gave us six for ten cents, and you may laugh, but each of us ate three, for our day in the open air had given us a fine appetite.

After supper we sat in the pavilion on the lake shore until eight o'clock when we returned to the city, each carrying a package containing eight boxes of berries and each well pleased with the day's vacation.

M. J.

MINNEAPOLIS, MINN.

Goat Herding for Vacation

What do you want in vacation? Change of occupation? Thrilling experiences? Then by all means keep goats. The baby was ordered to have goat's milk. His mother, who boasted her ability to milk a cow, scoffed at any difficulty in milking a goat—before the goat came!

Our hillside offered a pleasant pastoral scene with the gentle brown mother goat tethered under the pear tree and her wicked little kid, Pan, chained to a stump. What peace! One dreamed of the ages when our ancestors mused beside their flocks.

A drop of rain! The summer idler welcomes a refreshing shower—not so the keeper of goats. Jossie must be hurried to her stall, Pan sheltered in the chicken house, lest they plot evil together.

It is almost noon, the hour when the roar of blasting the Palisades is heard—timid Jossie must not be left alone. You stand by her heard, hoping some one is guarding Pan. Bang! A black streak down the road is the blur of escaping Pan. What chase compares with this! The weary victor finally climbs the hill carrying a frantic bundle of innumerable black legs. The broken chain is mended and the wicked kid is staked where the lilacs will shades him from the returned sunshine. No one knows what has become of the baby meantime. A mere baby may be left to take care of himself.

It is mealtime, and the family gather, not to eat, but to plan the menu for the goats. They consented to eat a few oats for breakfast—no hope of urging that twice a day. The baby has a chunk of dry bread which he holds out to Jossie who nibbles it daintily, then turns languidly away. Pan rushes for it, horns down—over goes the fat baby shouting with laughter. The housewife offers carrot tops, parsnips, potato and apple parings. For the goats they do not exist. The man of the house brings hay, alfalfa and corn ground with the meat-chopper, in vain. The goats continue to bleat vehemently as they have done all the morning. Over the wall comes a sympathetic neighbor with a bag of cabbage leaves. Jossie lets her eye linger a moment on their crisp whiteness—that is all. An inspiration! Oil, vinegar and a dash of salt—and cold slaw is

set before my Lady Jossie. The day is won, but what effect will it have on the milk for the baby? Pan is given a dish of milkman's milk, in which he promptly steps. That means another dishful, as their daintinesses will go hungry rather than eat or drink anything not "kosher."

The summer afternoon invites a nap. "Meck—meck,—meck,—where's everybody? Meck,—don't go off and leave us alone! Meck—meck—meck. I want my FOLKS! Meck—meck!" Humbly we return to the piazza till milking. To each of the family a task is assigned, one to Jossie, one to Pan. Jossie is chained in the barn, her head firmly clasped in the grandmother's arms. The man of the house seizes the hind legs: the mother, calling to the excited neighbors to keep the baby from crawling too near, advances with her quart measure and the dance begins. In the cool dimness of the barn is a blur of sound and color, a bang, crash, meck and ha! ha! proudly the milker surveys her measure—five ounces! One more tussle—and goats, milkmaid, lords and ladies in waiting—and the precious five ounces—are catapulted from the barn! Milkman's milk tonight, or the baby must go supperless to bed.

Morning dawns and we arise, wiser, hum-

By Mrs. M. H. B. Mussey, Croton, N. Y.
PAN AND HIS PLAYFELLOW

bler and hopeful. Cheerfully the family gathers for the great event of the hour—the milking. The baby crows on his father's shoulder, the mother runs gaily to the quiet barn. Within too is peace—for Pan has broken his bonds and with mad joy and frisking tail is just draining from his contented mother the last drop of our baby's breakfast!

Two goats for sale—pretty creatures—Josie and Pan! Will you buy?

MABEL HAY BARROWS MUSSEY.

CROTON-ON-HUDSON, N. Y.

Our Vacation Home.

In the spring of 1881 I was on the verge of a nervous breakdown. As I had stirred the soil in my youth I naturally longed to get back to the bosom of mother earth. And after I had discovered an abandoned farm and lived there six months I was a well man endowed with pristine vigor. That farm became our vacation home for twenty years.

The farm is situated in the beautiful town of Topsfield, Mass., twenty miles from Boston. Originally it contained thirty-five acres, but it has gradually increased until now we have one hundred acres. It is one mile from station, post office, library and church. It is near a river furnishing facilities for boating, bathing and fishing—an ideal location. On it stands a venerable house, beautiful for situation, containing twelve rooms. The family consists of parents, three sons, three daughters and an intelligent Maine woman as helper and assistant mother.

The boys came home from school and college and worked on the farm to earn money to pay their way, incidentally to develop the muscle necessary to place them high in college athletics. One year we saved enough from the farm, inclusive of vacation expenses, to put a boy thru one year in college.

Hay became our principal product. We studied soils, methods, seeds, fertilizers and markets until we became experts in this line of farming. In 1906 we received a premium for raising six tons of hay from one acre. In 1911 our hay product amounted to 175 tons. One after another of the boys succeeded to the superintendency of the farm, thereby gaining a knowledge of business as well as agriculture.

We have a fine orchard, producing excellent and abundant fruit. We also cultivate peaches, plums, pears and small fruits. Our garden is one of the best, and we keep a cow. Thus we live on the fat of the land, and the boys have grown up into stalwart manhood. The ladies use our new and spacious barn as a recreation and reception room. Here we have lots of fun, friends, good times and are happy.

During eighteen of these twenty years I was pastor of a new church in Haverhill, the Riverside, which we helped to build, equip and train, and of which I am pastor emeritus. This taxed all our energies and resources. I could give only four or five weeks a year to the farm. But it was only twelve miles from the parsonage and I drive to it every Mon-

By H. P. Noble, Falls Church, Va.

THE PILOT BOAT AT NASSAU

day—my day of rest, recreation and great joy. I have little space to chronicle results. We are now a widely scattered family. One son is in Japan, one daughter in Mexico. We are all deeply interested in missions and sharing in its work. We now live near the village on a beautiful historic spot, about one-half mile from the farm, which is under the care of our youngest son. The farm has greatly appreciated in value as well as productiveness. It is still the apple of our eye, and we regard it as a little patch of Paradise regained. I am now seventy-seven years of age, in the enjoyment of perfect health, have more physical vigor than twenty years ago and am touching life at more points and doing more work than ever. These are a few of the things which our vacation home has done for us.

GEORGE L. GLEASON.

TOPSFIELD, MASS.

Two Hours at Nassau.

As the steamship approaches Nassau, almost before land is sighted, she is met by the little two-master, and exchanges her sacks of mail for a pilot. The north-bound and south-bound steamers between New York and the south coast of Cuba meet here, and, by agreement, the first in must not leave till two hours after the other arrives, in order that the Nassau business men may have opportunity to answer their mail. The illustration shows the pilot-boat, as seen from the steamer's rail,

HAMILTON AND RED HOLE, BERMUDA

towing alongside and taking off the mail sacks. During the two hour interval little darkeys are continually imploring the tourists for a "small dive." A few coppers thrown overboard will be caught before they reach bottom, even in shallow water, and as the youngsters' heads emerge, the mouths, tho choked with coppers, are hardly clear of the water than they recommence, splutteringly, their request, "Give us a small dive, Chief."

FALLS CHURCH, VA.

A Summer Trip to Bermuda.

I knew nothing definite of Bermuda but that the sea was a wonderful blue, and the houses were white, and that the trip was quite beyond my purse. But last year I saw the \$10 round trip advertised and determined to realize my dream of seeing the little picture islands.

We were a party of four, and took, besides a suit-case each, a steamer trunk, the expense and capacity of which we all shared. Many of our friends marveled at our foolhardiness in going to a warmer climate in summer, but we were looking for something entirely new, rather than a drop in the temperature, and the best of it was that we got both, for when we left New York on July 8th the temperature was 98°, whereas on our first night out we had to don wraps when on deck, and the temperature was never beyond 86° at mid-day in Bermuda, while it was very much cooler at night.

The \$10 rates applied to only two state-rooms on the steamer, which we took, so it is best to apply for passage at least three weeks ahead. The stateroom accommodates six people, and comfortably so. There was no

second-class passage, and absolutely no discrimination in the bill of fare, which was good and plentiful. This reminds me, that on the second day out, it being Sunday, our chaperone asked a member of the crew if there would be service that day. "Yes," said he, his German imagination not traveling any further than the dining-room. "Bullion at eleven, tea at five." Later she had the temerity to ask another Jackie, who replied that "Efferybody prayed for derselfs."

We found very comfortable homelike accommodations at a private boarding-house in Hamilton at \$10 per week each. With \$10 each for incidentals our expenses came to \$30 each for the trip. This includes drives covering in all about forty miles, visits to caves, marine gardens, lighthouses, and various other delightful side-trips. To those who take cameras I might mention that there is a duty of 15 per cent. ad valorem.

Bermuda was something "quite different" for us. It is very difficult to describe its charm briefly and adequately. The two things which imprest me most were the excellent architecture and the superior type of negro; both to the enduring credit of the English occupation. Everything is in miniature; the islands are only fifteen miles long and three miles wide, yet they hold many things strange and beautiful.

The whole place has a soothing effect, due perhaps to the absence of trolleys and motor cars, and one drops worry and rush like a worn-out garment. It is the land of the dreamer and the lotus-eater, and I would not dare stay there longer than two weeks for fear of changing my preference for the "cycle"—not "in Cathay," but Bermuda.

MT. KISCO, N. Y.

Three Months with a Machine

The check from home was the first har-binger of vacation. It came flying in just as final exams were commencing at college, and with it was a dear letter of regret that it should be so small.

It was at least big enough—or perhaps little enough—to be the excuse for a good deal of planning. And when one turned out her study lamp and tumbled into bed at two o'clock of a May morning it *was* a relief to banish "Math" formulæ and Old English declensions for the sake of considering whether one should plan for two or three white shirt-waists, and if this year's Valenciennes could be made to do on next year's party dress.

When the last "exam" paper had been prayerfully handed in came two days when one's aunt and oneself took an early boat to San Francisco, and a late boat home, filling the interval between crossings with delightful, frenzied shopping.

Another day went in packing year-old garments and the crisp yard-folds of new material that was to make their successors, and Thursday morning one crossed the bay to San Francisco, crossed it again to Sausalito, and boarded the puffy little narrow-gauge that set one down at noon beside the stage waiting under Cazadero redwoods.

Boosted to the high front seat (a stage-driver who has known one always has no more regard for present high-coiled hair than for former pigtails) one craned an anxious neck to be sure the precious trunk went on the hind boot, and was securely strapped in place. Fancy if it should fall off climbing a grade!

Before the forty mile drive was over the sun had dropped behind the mountains the red wagon climbed, the even had met one where the road dipped to the ocean, the moon had silvered the surf at the bottom of the black bluffs, and it was one in the morning before the home lights shone out yellow, and that trunk was set down at the garden gate.

One didn't get up for breakfast the next morning, and if an indulgent mother insisted, even lunch might be eaten in bed. But energy and ambition stirred faintly in the middle of the afternoon and brought one down stairs shortly before dinner, to begin a leisurely display of one's purchases (including their price per yard, which was commonly admitted to be surprisingly low).

By the end of the next twenty-four hours energy asserted itself more strongly. One bil-lowed out lengths of fresh, clear-colored cot-tons on one's mother's high bed, creamed a foam of tissue paper pattern over them, made a tentative snip with the shears—and plunged in. Presently the machine was pulled out of its corner to stand in the "ocean window" that overlooked the blue Pacific, not a hundred yards away—and the summer's whir began.

The three months were not all spent at the machine. There were days on the beach, others under the redwoods, with one's mother's good things for their picnic lunches. There was boating on the river, and wild-strawberry-ing in flat pastures.

But the clearest memory is of the big bed-room filled with the soft whir of the auto-matic, the treadle flying under one's feet, the faint creaking of the wicker rocker where one's mother, who frankly disavowed "cutting and fitting," sat blind-stitching one's hems, making one dozens of button-holes and whipping one's yards of seams.

Over it all the steady talk went on—joined in by the college chum who had come to summer with one, and who sat by the "orchard window," her finger holding the place in "The Hound of the Baskervilles."

When the plainer sewing was over came the day when the bed shimmered with silk mull, trellised with palest blue, over which pink roses clambered. There were dreams went into the making of that party dress, dreams of the next year's dances to which it would be worn.

When the lace was whipped on its last ruffle (they wore ruffles in those days) and it was laid, tissue-wrapped, atop the pile of finished sewing that had slowly filled the trunk, one went out to lie on one's back under the pines and look up at the blue sky thru the breeze-stirred branches, and out at the blue sea thru the rough barked trunks.

Day after tomorrow one was going back to college—to one's *Senior Year!*—what would it bring one?

But oh! dear editor! that was five years ago!

BERKELEY, CAL.

ROYAL PALMS, BERMUDA

Gloucester Fishermen.

One of the interesting sights of the Martha's Vineyard coast, and a very serious matter to those who are the chief actors, is seen when the Gloucester fishing smacks put in for a fresh supply of bait, water, ice and other necessities.

The Gloucester smack, unlike the type of fishing schooner most familiar to summer visitors, is a thing of beauty, built for speed and seaworthiness, and scrupulously clean. It gladdens one's eyes to wander to the waterfront and to find instead of the representatives of the tattered *quahaug** fleet, several Gloucestermen made fast to neighboring wharves—the crew of each working like mad to ship supplies and be first away. The matter of being first to return to the home port with a large catch aboard is of vast importance, and contested keenly by the veteran crews.

Glancing over the deck of the nearest schooner, even the most thoroughgoing landsman is impressed with the immaculate neatness from the nest of dories 'midships to the careful furl of the huge mainsail.

As we stand here admiring there is shouting up the narrow street and a wagon approaches, surrounded by women and small boys. This wagon, loaded with "bait," is from the herring-creek which yields a large supply of fresh water herring every season, which are packed aboard the fishing schooners coming all the way from Gloucester for the pur-

pose. When this glistening cargo is stowed away, they are off in a wild race for the "banks."

The presence of the crowd around the loaded wagon is due to a curious old custom allowing every male citizen a "mess" of herring each season. Hence the cluster of housewives with their dishpans. A "mess," being an unknown quantity, is determined according to the lights of the individual, consequently, the demands may frequently cause wrath on the part of those supplying bait to the impatient fishermen, thereby occasioning much amusement among the spectators—including all the youngsters.

Arriving at the wharf, the wagon is backed toward the stringpiece, and the transfer of the herring quickly and systematically carried on. A large basket on a tackle is loaded and swung aboard, then guided to the open hatch and dropped quickly to the schooner's hold where the bait is stored.

We watched as many as five schooners struggle to be first away and, as they cleared the harbor, a sixth put into port for bait. Fast as this skipper worked his men, he seemed to be followed by misfortune, for, after extraordinary delays, when he was at last prepared to take up the pursuit of his rivals, the unlucky crew made sail and, in their haste, worked in too close to the opposite shore and brought up hard and fast in shoal water.

It seemed strange to see the beautiful schooner, her sails drawing, with a slight list, standing motionless. All day she held, and

*Quahaug: Indian name for little neck clams.

ABOARD A GLOUCESTER FISHERMAN

"THE GLOUCESTER SMACK IS A THING OF BEAUTY"

all day the wind continued to fill her sails, but not until late afternoon at flood tide was she released from her exasperating position.

Then no time was lost in making for deep water, closing up the long distance between the belated schooner and her luckier sisters.

J. M. Rosé.

EDGARTOWN, MASS.

On an Alberta Homestead.

My son had taken up a claim in Alberta about one hundred miles east of Calgary. Boys can take homesteads in western Canada when they are eighteen and prove up when they are twenty-one, living only eighteen months, or three summers, on the place. They have to cultivate ten acres each year and inhabit a comfortable shack.

The school superintendent said the boy would get as much out of six months a year in school, and the rest up against the real thing on the frontier, as he would with the whole year in high school.

I determined to visit the "kid" on the claim. A fellow-minister had two sons on adjoining claims. We secured homesteaders' rates; slept two in a bunk in a tourist car at fifty cents per; and landed at a six months old town on the C. P. We knew the boys were on "23:11," and that was forty miles away. We fell in with a Michigan homesteader who was going with a load of fence poles sixty miles north, and got a ride. The first day we made twenty-five miles, at the rate of three an hour, and passed one house. We crossed the Red Deer River on the Gov-

ernment ferry, slept in a "road house" and did the remaining fifteen miles in a little over half a day.

The shack was ten feet by twelve; cost \$28 for the lumber and \$21 for hauling, and was "home made" including chair, table and bunk. A buffalo trail ran past the door, a buffalo skull was over the entrance, and the prairie looked just as it had for the last 10,000 years. A bunch of Omaha boys had taken up about 3,000 acres of some of the best land in Canada. It would raise 50 bushels of wheat and 100 bushels of oats to the acre. Every inch could be plowed. Fifty shacks could be seen where a year before there were none. I met a man who went sixty miles for supplies, thirty miles for coal, four miles for water; but the air and the land and the sunlight were free; the railroad was coming, and soon he and his son would have a square mile of splendid land, worth at low estimate \$12,000.

We cooked and slept and ate and worked. On Sundays we had a spread and invited in the neighbors. We nailed a long plank from the small table to the wall, and eleven sat down—eleven men and one woman; she looked like an angel, for we had not seen a woman for many days.

To vary the vacation we secured a small boat and drifted for eight days down the beautiful Red Deer River. We saw numberless beaver, endless strata of coal; feasted on bushels of Saskatoon berries, witnessed beautiful scenery, saw half a dozen people in the 250 miles, slept out every night and reached home looking like British Columbia Siwash.

The value of this kind of outing is that you have a good time, see real life, lay the foundation of empire and end up with a \$3,000 farm instead of an empty pocketbook.

F. C. ROUSE.

OMAHA, NEB.

A "Hunting" Vacation.

My vacation was not of the usual kind, intended solely for pleasure and recreation, but it was my annual visit to the home of my childhood. With the pleasure, I had planned to combine a search for some literary material which I had been unable to find at home. So it may properly be termed a "hunting" expedition. I visited libraries in Baltimore, New York, Worcester, Salem and Boston. I was looking for a book of metrical psalms, which was said to have been issued in 1641. I did not then know the riches of the New York Public Library along these lines, but I thought I would look there. It was only two days after the opening of the new building. I went into its music room and spent some time searching the shelves, but could not find my book. Then I was directed to the room where the treasures are kept under lock and key. Here I had to wait only a few minutes after making known my errand before, when, much to my surprise and delight, the coveted volume was placed in my hands and I could turn its pages as I choose. And then to be told that this is the only copy of this psalm book that is known to exist!

Next I wanted to see the home of Simon Bradstreet, in North Andover, Mass. Bradstreet was one of the colonial governors of Massachusetts. The home is also of further interest because his wife, Anne Dudley Bradstreet, was the first American poetess. I had been told that the people who lived in it were very willing to show it to visitors, but when I reached the open door, I could look in, but not go in; for no one was at home, and the screen door was locked. But I found the old burying ground nearby and spent some time reading the quaint and peculiar inscriptions. One stone stated that the person buried beneath it "Departed this life being melted to death by extreme heat."

One of my earliest recollections is that of seeing the funeral train bearing the body of Vice-President Wilson from Washington for burial in his adopted home town of Natick, Mass. Now I had proposed to myself to find out more of the early life of that man, once so prominent. I had relatives in Natick, and while visiting there a gentleman called who now owns the former home of Mr. Wilson. He was able to add to my stock of knowledge. A week later, while waiting at the cross-roads for an electric car, I met a lady, who, I soon learned, was from Farmington, N. H., the birthplace of Henry Wilson. Our conversation soon put me in possession of other facts that I was seeking. Everything

seemed to come my way and to add to the knowledge I was after. Nearly every day of that two weeks was planned ahead, and all the plans were carried out; so that at the end of the time I had visited many old friends, and had learned many of the things that I had been looking for, or had discovered clues successfully followed up later on. Some perhaps would not call this a real vacation, but it certainly was a relief from the routine work of the rest of the year.

FRANK J. METCALF.

WASHINGTON, D. C.

"Aunt Joe's" Way.

January, 1904, Aunt Joe was left a widow at the age of fifty. The next June her only children, a son and daughter, who were coming home from college, were killed in a railroad accident. Thus in a few brief months her heart and her home were left desolate. Being her only near relation I dropped my work as teacher in Chicago and joined my lot to hers.

For three summers we left her fine old country home in Iowa and sought change of thought and scene in visiting many interesting places, or in resting awhile in mountain resort or by the sea-side.

Aunt Joe's deep grief left her little interest in life and she felt her future was a blank; still she agreed to these trips with me, saying I had need and a right to such recreation. I allowed her to

think so, tho my only motive was to seek such varied sights and experiences as might draw her mind from the past and arouse pleasure and interest in the present—tho my efforts found little success.

Before the next summer I became interested in accounts of "outings" given to poor children from the big cities. Then an inspiration came—why not spend our vacation at home, and while helping others bring about conditions that would lead Aunt Joe out of herself, would cause her to exert herself for others and so find new life in their lives? As usual she let me plan for our summer, and thru a friend among the Chicago teachers it was easily arranged.

In the middle of June, with its abundance of sunshine and flowers, we received our first little guests; eight shy young girls, thin, pale-faced, shabbily dressed, with eyes full of wonder at country sights so strange to children from the heart of their busy city. Aunt Joe's heart warmed to them at once and she was as eager as I in setting them in the two big, cosy rooms arranged for their use, in seeing that each one had abundance of the fresh, delicious food found at its best on a country table, and in making them feel perfectly free to romp and run and play to their heart's content in the lovely out-doors. The affectionate natures of the girls responded to the kind influences about them, their cheeks colored and filled out, their laughter rang

out more merrily, their strength increased from day to day. I can but hint at the pleasure with which they gathered the wild flowers or decked themselves with the June roses, or with what vim they hunted for the loveliest spots in the nearby groves, or joined in the novel work of weeding *real* flower-beds, or picking the rich strawberries and green peas for their meals. Not less did they enjoy two busy hours in the morning when Aunt Joe and I taught them to sew, and helped each girl to make a few pretty garments for herself. Perhaps the best time of all was evening when we gathered on the wide veranda and quietly talked or told stories or sang together as the twilight gathered.

The day the girls were to leave us Aunt Joe said to me, "I have gladly done this, feeling that it was for my own girl's sake; could not we give a similar outing to some boys for my boy's sake?" Of course her wish was carried out. A week after we said good-bye to our girls the place was merry again, but this time with boyish shout and laughter.

That was the beginning; our vacations since have all been on the same plan, and now Aunt Joe forgets the sorrows of the past and smiles as she plans and works for her foster children. Whether they or we two have received the greater benefits I know not, but our experience has confirmed the trite saying, "He gaineth joy, who giveth joy."

A. C. I.

TINGLEY, IOWA.

Thunder and Lightning.

It was a delightfully cool July day—one of those ideal June days which on Mount Desert Island linger on far into the summer. Our party of nine, six ladies and three gentlemen, had made the ascent of famous Mount Green. A young lady from the far South and a gentleman from New York City, scorning the commonplace return by the route we had followed in coming, descended the mountain on the "off side." When last seen, far down the ravine, they were vigorously beckoning us on. Our natural inference being that they had discovered a road, or at least a path, along the stream at the base of the mountain, we decided to follow their lead. About half-way down the steep mountain-side, a conservative member of the party called a halt and, pointing to the out-cropping rock everywhere about us, remarked upon the impossibility of returning should the gorge below be impassable.

"Nothing is impassable," exclaimed a decidedly athletic young lady.

The base of the mountain was reached, but, to our chagrin, we found no road, not even a path. The mountain-side extended down almost to the stream, and then abruptly terminated in a ledge of rock which, with a corresponding ledge at the base of the mountain opposite, formed a narrow waterway presumably leading to the harbor.

Discovering an opening in the wall of rock, we descended to the bed of the stream. There, seated upon a huge boulder, we gave ourselves up to the enjoyment of the scene. The wild flowers along the edge of the wall which shut us in, the lichens on the moist rocks, the miniature cascade, the faint suggestion of a rainbow, and, withal, the solemn silence, broken only by the ripple of the water and the distant song of birds, dispelled the last lingering sense of foreboding.

Before resuming our tramp we exhausted our combined lung-power in an endeavor to reach with our voices the venturesome pair who had "gone before." In vain. And suddenly, as from a clear sky, came a clap of thunder. Turning, we saw, above the distant peak of Mount Green, the edge of an ominously black cloud. A flock of crows rose from a barren pine tree well up the mountain opposite, and with uncanny cawings and flapping of wings flew seaward.

The youngest of our party was observed to be shivering.

"Are you cold?" I asked, gallantly offering my coat.

"No," she responded appealingly. Her malady was fear!

There was no more laughter. Weariness and anxiety—not to speak of hunger, for it was long past noon—were traceable on every countenance. To add to our woes, the athletic young lady to whose optimistic mind nothing had seemed impassable, slipped on a moss-covered boulder, spraining her ankle.

By this time the rain cloud was rushing down the mountain-side. At frequent intervals we were startled by a fierce sheet of lightning and an ear-piercing volley of thunder. A nearer flash, with a sharper rattle, was followed by the crash of a falling tree, half-way up the mountain-side.

We men, now thoroughly alarmed, held a hasty consultation. Our watches pointed toward six o'clock, and yet we were miles—how many we dared not guess—away from Bar Harbor. By agreement we set out to explore the woods—one of us on the right, the other on the left of the stream. Soon my ears were greeted with a glad "hello"—followed with an assuring "all right." My friend had discovered a cow-path, with fresh tracks pointing toward the bay!

Meantime, the rain had ceased. We took up our line of march, single file, thru the fragrant woods. Soon we found ourselves in an open space, with three small farm-houses in sight. Trudging across a low and boggy field and thru a muddy potato-patch, we presented ourselves at the nearest back door.

A kindly faced woman quitted her washboard, hastily put on a white apron, and came out to greet her unexpected guests. A big boy brought chairs from the house. Soon

By E. P. Croker, Rochester, N. Y.

IN THE GLOW OF THE CAMP-FIRE

we were comfortably seated in the back yard, grouped about our "Madonna of the Tubs," drinking tea and eating cookies—as happy as so many children at a picnic.

The Madonna was sorry her man had gone to town; but the boy would hitch up the two horses and would git us back home to the hotel, somehow. The boy would drive the skittish two-year-old—if he could ketch him, and one of us could drive t'other. We harnessed the old reliable, and after an exciting race up and down and across the field, the colt was corralled and "hitched." The lady with the sprained ankle chose a seat with the boy behind the colt. Two, less ambitious, sat behind, with legs hanging down, the rest were dumped into the truck-wagon. Thus with hair dishevelled, with dresses wet, bedraggled and muddy, our party rode thru the principal street in Bar Harbor and up to the hotel!

A hearty "thank heaven" from the elderly lady who was presumably chaperoning the young ladies, a violent handshaking with friends—including the two who were "gone before," and a cheer from the amused but sympathetic stranger-guests on the veranda, and our misadventure was over.

JOHNSON BRIGHAM.

DES MOINES, IA.

Vacation All the Year Round.

My vacation last year started when I got the spring fever and looked over the pages of seed, shrub and tree catalogs. Then I ordered my goods, and with old clothes on, planted and set out my purchase. How I did enjoy this work! The first season brought

me fine returns. My vegetable patch brought me in \$100 from a 40'x90' space. Later in the summer I bought an automobile for \$675, carrying two adults and at a pinch two of my children besides. It gave us many enjoyable trips. All my desire to take journeys on the ocean was gone. I got a vacation at home in beautifying my surroundings, helping the birds, watching the growth of life in all things nearest me. This vacation cost me little in money. It contented me and gave me relaxation and I added to the enjoyment of others. This was a vacation according to my means.

I am a country physician, love nature and am having a cracking good time. The population is increasing; accidents happen; infectious diseases start in September when school begins and keep up all the school session; pneumonia cases create a diversion toward spring. It is all vacation work; the joy of being alive and bucking the tiger. And I have never seriously contemplated devoting a set time to vacation. GEO. H. NORRIS.

ANNANDALE, MINN.

Alone with "Billy"

I am enjoying the pleasantest vacation of my life! I was a teacher last year—it seems so long ago—and like many others, felt that I must have a long vacation—a *real* vacation where I could do just as I pleased, with plenty of sleep and rest and quiet. Why not enter a homestead? Many of the teachers of the Northwest had done so, and had not only added years to their life, by one year outdoors with nature, but had added to their possessions a valuable quarter section of land.

I began to investigate; grew so enthusiastic

that I had my homestead entered and a cabin built by the time my year's work was done, the last of May. I immediately came to my "new home" in the woods, which is in a pretty little valley in Idaho.

How wonderful all nature seemed to me! Do you ask, "Do you live all alone and don't you get lonesome?" Yes, I live alone with nature. I brought a single companion, my pony, "Billy," with me. My nearest neighbor then an Indian a half a mile away. The nearest family, where there was a woman, nearly two miles from my cabin; as it is off the main trail, I see only those who come to my cabin. Sometimes weeks would pass without seeing a woman, but seldom a day that some lone bachelor didn't stroll past with his gun or fishing tackle.

I hadn't been in my "new home" more than a week when a big brown bear walked leisurely past, going down to the creek for his bath. I had never before seen a bear in his native home. I admired him and wished for a camera. Shortly after I saw a large cougar moving stealthily along in the dusk of evening. I called at him, he turned and looked at me. Then I wished that I had a gun and knew how to use it; as there is a \$15 bounty on a dead cougar. This naturally intimidated me so I never went out of sight of my cabin except when I was on my pony.

I was seldom lonesome and never afraid. The summer passed all too soon. But autumn was no less lovely and more invigorating with its frosty mornings. I was now "moved" to pile brush and chunks and burn them. I never built fires until evening, as there is less danger of the fire "running" after the dew

begins to fall. How I did enjoy heaping the brush on the logs and watching the bright blaze leap skyward. This work was interrupted about the middle of November by the first snowfall. The ground has been covered with a mantle of whiteness ever since. Winter has many charms for those who have time to discover them. It has passed all too swiftly for me. I had planned to read so many books, but if I have read fewer books I have read nature more.

At the close of this year, as I go forth again into the busy world, I shall carry with me pleasant memories of the "new world" of nature that I have recently discovered a little of, and that has taught me useful lessons.

MADGE D. ICE.

BENEWAH, IDAHO.

A Walt Masoniad.

A bookworm, predisposed to roam, but in vacation kept at home, resolved to spend his leisure days on INDEPENDENT waterways—from his back numbers to pick out appropriate things to read about, and in a hammock 'neath the trees to go "globe-trotting" at his ease. So, in the Argo of his mind—adventure's golden fleece to find—the Seven Seas, from bound to bound, our Jason made his cruising-ground; and what more fitting port could he choose for his first than Pagasæ? To view those painted stelæ fine, see March 11, 1909. He watched the patient toil progress, but pretty soon, I must confess, he found these ancient "diggings" "slow," and cried, "This is no kind of show. I'd rather look at Uncle Sam making his mark in Gatun Dam; so heave-ho, boys, and westward bear

By Madge D. Ice, Benewah, Idaho

THE HOUSE IN THE WOODS AND BILLY'S STABLE

—we'll go and see 'the dirt fly' there." Thence, over southern oceans wide, he sought the sacred Ganges' tide, the Delhi Durbar's pomp to see; and from that gorgeous jubilee proceeded to the Great Northwest and stemmed the mighty Yukon's breast. Then (from Beersheba back to Dan) he navigated to Japan, from Yokohama's bay to gaze on Fuji veiled in morning haze, or sharp against the sunny sky, or, in the moonlight, white and high.

Thus, roving at his fancy's will, our mariner contrived to fill his homebound life with pilgrim scenes—Hawaii and the Philippines, dear R. L. S.'s lovely isle, the fertile banks of the White Nile, Cuba and Porto Rico, and the ports of many a foreign land. He called an airship to his aid and several inland voyage made—where high Sierran torrents leap, or Himalayan glaciers creep, or Mexico's wide valley lies in shimmering beauty 'neath the skies.

And, finally, our travelled friend, resolved his wanderings to end, cast anchor in Lake Lucy fair, and settled down to "farm it" there. Ah, that our sailor-man might make harbor in that delightful lake! Of all the havens in the world that spot should see his canvas furled! Oh, Mr. Powell, tell us more about the life on Lucy's shore!—tell us about your "Druid pines," your peach trees and prolific vines, your orange orchards globed with gold, your pampered alligator old, your cherished birds that sing and flit, that Elder of "artesian wit," the mulberry, the Marechal Neil, and what you think and what you feel. These things our Jason does not need a real vacation to re-read,—he keeps them strictly by themselves upon his INDEPENDENT shelves, and cons them o'er and o'er till he knows them by heart—like A, B, C. And should his ship come in in fact, a swift migration he'd enact. Bue he, not furnished with the rock, must stay and tend his "watered stock."

H. E.

WOODFORDS, ME.

Small Boat Racing.

Do you know that sinking sensation in the pit of your stomach which creeps downward to your knees, via your spine, when in the blissful confidence of youthful and feminine ignorance, you have entered your cat-boat for one of the season's races?

The fateful day dawns sunny, with the faintest ghost of a shifting wind, which by bathing time has increased to a flawy blow.

The beach is gay and every one tiresomely cheerful. Your hope that noon will bring a dead calm is promptly squelched by a glance at the white-capped harbor.

After the swim and a late dinner, there is

the agony of deciding how few reefs one can stand and just how many one dares put in, in the face of scornful opinion. The sunshine is melting away in the rising wind, and as the barometer falls, so correspondingly do your spirits. The harbor is waking from its noon siesta as you hail the stake-boat and ask the official time.

Then comes that horrible jockeying 'for place! Great twenty-five foot cats of the first class sweep down upon you and to avoid one means threatened collision with another. The thrilling joy and horrible nightmare of that getaway!

The first class is off, and a nervous sigh escapes you. There's just that much eliminated from the final jumble! "Boom!" goes the warning gun and you come about and drift toward the line. The tide is with you and your drifting is rather swifter than you had calculated. You watch with bated breath the distance between your boat and the imaginary line, shorten and shorten. "Boom!" With one wild wheel about, a graze across the deck of the nearest cat, a jump forward

as the wind catches the sail you are across, all in a bunch.

"Girls, for thunder's sake, the centerboard! Up! Up! How did I happen to forget that centerboard?"

The first buoy is passed with only a slight slackening away of the sheet. The boiling seas behind, the slight encroachment of an overhauling boat, cause an increased nervousness and tendency to decided irritability toward your crew who would rather chaff with those Amherst chaps in the boat ahead than attend strictly to the business in hand.

You are nearing the point buoy and laying your course so that you can round it on a jibe. The crew are chattering with the unconcern of the irresponsible. You cast anxious looks at the nearer boats, and wonder how you are going to do it without fouling.

"Keep off there," cautions the man at the wheel of the following cat. "Give us room on the turn."

You cast an appealing look behind and swing over a bit. The leading cat rounds, her boom swings with a sudden snap, and she keels low to the force of the wind as her crew trim sheet.

You are there before you realize it. "Ram down the board! Quickly, quickly! Now! Heads low! Keep off! Heavens!" Over comes the boom with a rush. You're clear. "Get in the sheet! Tauter, closer! Up to windward! Lie close! There!"

Now you're clinging to the tiller and your silent crew are crouched on the wind'ard rail, drawing on oilers over their soaking whites. A stunning sea strikes and sweeps over; then

another. Now a flaw, and the leeward rail ships a bucket of green water. She rights herself and plunges on. It's a long chase to the next buoy and a wet one indeed!

"Coming about!" It's a beat home for the stake boat, now. A long zigzag proceeding that calls forth much speculation and careful judging of distances.

At last the final leg. The "Alice" leads, the "Alert" and your little craft are struggling for second place. If the wind holds and favors you, you can just squeeze by the spar buoy. There goes the gun as the "Alice" crosses and rounds up. Neck and neck you fly along. The crew no longer cold and shaking but tense with excitement, eyes glued ahead. All your nervousness has gone long ago. Now, only the joy of the chase, and the love of the sport! Pale, wavering sunlight flecks the gray water and the wind is steady. You are a boat length ahead—almost in line with the stake boat. Eager eyes sight the line. "Across, across! Boom!" The gun's for you! A second after, the gun's for the "Alert!"

What matters it if your time allowance doesn't cede you first place, and there's always a chance that it may. The race is run. Hurrah! When's the next one?

GRACE NORTON ROSÉ.

WEST SUMMIT, N. J.

Cabbages and Kings.

"A hundred heads waiting!" A brief message, but it sets me spinning around the office while I give hurried orders to Lucy: "Start Taylor on the Babylon thesis—watch topics and 'subs.' Don't let Jones have his Columbus oration unless he pays for last year's Fourth, too. Finish my stencil—don't punch out the o's"—and I am gone.

Down in the Circle I catch a car for a three-mile flight into the country. The autumn haze is in the air; the maples are aflame. As I drop from the car and run up the lane, the air vibrates with the keening of crickets at the summer's wake.

The big house is silent, but I hurry to the cellarway, where I find the performance on. In a large basement, Mrs. R., Polly and Sid are placing a kraut-cutter, tub, and huge jars, and piled high on a great table are the loveliest pale green and ivory cabbages. Polly drapes me in a big sack-apron, and my pet pleasure begins.

Botany and chemistry cannot destroy the feeling that comes as I cut open those heads to remove the cores—the feeling of wonder and reverence for that which is fresh from nature's workshop. Observe the workman's method of packing—such crumpled goods, but so solid, and the crinkles only add to the crispness and beauty! How they crack as

the knife runs across their crowns—a tremendous force imprisoned! Here is one bearing the marks of a tragedy—a heart too great for his head, he has burst! Mrs. R.'s discussion of the comparative merits of Winningstadt and Flat Dutch does not prejudice me—all honest cabbages are good. O ye that are dyspeptic! know ye that raw cabbage is nature's own restorer? Eat it without condiments and your astonished stomach will work as it never did on predigested foods!

The dignity of time is back of a cabbage: this head is as surely a product of the ages as our civilization is. When I consider its beauty and use, and the patient, generous constructive work of Mother Nature and Farmer John, the words of Walt Whitman return: "No man has ever worshiped half enough, no man has ever adored half enough."

At the cutter the fine shavings fall fast, and Mrs. R. drops layers of them into the jars, scattering salt, while I swing on a churn dasher to press them until water rises. In the winter I shall be invited to eat some of the kraut, not fried—that is suicidal; either raw or boiled long.

As the car carries me thru the chill twilight back to the city, I think of the reply made by the Roman Emperor when he was urged to leave his retirement and reassume the reigns of government: "If you could just see my cabbages you wouldn't mention government to me!"

HELEN RAPER.

RENO, ILL.

In Bonnie Maryland

My mother and I spent a delightful two weeks camping out and boating on the Chesapeake and Ohio Canal. Leaving Washington, we were raised by seventy-five locks up into the mountains of western Maryland, passing thru beautiful stretches of country where the joys of water and hill are combined. The canal is fed by the winding Potomac, and at some points the tow-path lying between the natural and the artificial bodies of water is but twenty feet wide. The tow-path is covered with wild flowers and from my tramps on the levels between locks I often brought back to our boat armfuls of blossoms. In contrast to the tow-path the burnside is massed high with rocks. About forty miles from Cumberland where the canal ends there is Little Slack Water and then Big Slack water, two large lakes on the top of high Maryland hills, where the Potomac forms a natural canal. About thirty miles from Cumberland there is a tunnel, three-quarters of a mile long, where we went into the bowels of the earth on a stream of water under the mountain in a canal boat.

We saw several groups of young college men, their pennant-covered luggage over their shoulders, walking the levels. We saw one nature lover in a canvas canoe. We saw students of geology investigating the wonderful rocks. But the people who were really of the canal permanently were much more interesting than those who had merely come to rest or to learn. The little mountain girl who had breathed the clear air all her life and who was so strong that she could steer the unwieldy canal boat was a charming companion. Jock, the negro boatsman, who played his fiddle and sang:

When my wife dies I's gwine git another one,
Big and black jes like t'other one;
When my wife dies I's gwine git another one,
Big and black like me—

entertained us for hours with his music and his ghost stories about Dead Man's Bend and Gyles's Bottom and the Devil. All the canal people know witches who can cast spells. History and legend grow abundantly along the canal and it would indeed require an expert to disentangle their roots.

If you want a pleasant trip with just enough of the rough in it, I can advise nothing better for you than to take a little vessel of about four feet draught, secure a way-bill from the canal company, and start from Georgetown, D. C., for a quiet, restful, but most interesting trip to Cumberland by means of this old and historic canal. Cool springs along the way will refresh your thirst, fresh milk and other provisions purchased at the

lock-houses will rest you after long tramps, generous hospitality will be repaid to you by the canal people for all your unpatronizing courtesy. You may fish, sleep out of doors and breathe good pure air at all times.

BALTIMORE, MD.

Voyages and Discoveries.

Nearly a century ago two Jesuits visited a lake hidden away among the mountains of northern Idaho. The Indians who dwelt around the shores called the lake Kaniksu (Ka-nik-su), and among them the Fathers resolved to found a mission. One departed for Montreal, the other remained to gather materials for the building. A storm came one night and next day the priest was washed ashore. The Indians buried the body; the lake and its people were forgotten. Time passed, the Indians were removed to a reservation, their tepee poles rotted, their little garden plots overran with weeds. From time to time prospectors visited the lake and dugged the hills for gold. A few remained, planted the open land, builded cabins and formed the nucleus of a settlement. Then Uncle Sam came along and erected the lake and its environs into a national forest, preserving its beauties to future generations.

A party of four—to say nothing of the canoe—rediscovered the lake last summer. It was not lost, but we felt adventurous and must needs go on a voyage of discovery. A

LAKE PEND' OREILLE

man enjoys his trip when he is expecting the unexpected.

The principal member of the party was a power canoe, propelled by a diminutive but busy two-horse motor. The little vessel was so light that we loaded it on a wagon and hauled it across the hills, over a rough and little used wagon trail, between the Pend Oreille River and Lake Kaniksu, called by the whites Priest Lake. The other members of the expedition were the Sage, seventy years young; the Pedagog, twenty-four years old; the Judge, somewhere between the two, and the writer, who declines to be sworn.

The start was made from the City of Sandpoint, on Lake Pend, Oreille, in a gale of wind. The Sage held the steering gear, the Pedagog sat amidships holding down the bedding, while yours truly managed the motor—which needed no managing. Lake Pend Oreille is anything but a mill pond when the wind is up and the little craft made heavy weather of it until we shot behind the hills into the river.

She purred along down the placid waters of the river all morning, scattering flocks of feeding ducks, scaring the wits out of honest milch cows standing knee deep in the cool water; sped in the shadows of towering cliffs about which clouds of swallows wheeled and darted, on to where Priest River mingles its limpid waters with the larger stream. There we hauled the canoe out and loaded her upon a waiting farm wagon.

We went ahead in an auto, and on what an auto road! As the sun was just hiding behind the hills we pulled into Coolin, the sleepy little hamlet at the foot of the lake. Coolin is blessed with an hotel, one of the old style with groaning table and white soft beds where one falls asleep "the world forgetting, by the world forgot." We did justice to both table and beds, for it had been a long, strenuous day in which we covered sixty miles of water and half as much of mountain road.

We got away from Coolin next day after noon. It was impossible to drag the Pedagog away from the table sooner. Our first port of call was Granite Creek near the upper end of the lake. It is a delightful camp ground, beneath the spreading cottonwoods, beside a crystal-clear brawling stream filled with hungry trout. The Limb of the Law joined us the second day, leaving Blackstone and Kent behind—we did not need them. From Granite Creek we proceeded to the head of the lake, had lunch at Camp Kaniksu, tried the Thorougfare between the two lakes—and made it—contrary to the prophecies of the people at the camp. Caribou Creek and its trout held us for several days. We explored the upper lake, a little gem set in the rugged hills, a silver mirror, a spot of ideal beauty, untouched by the hand of man.

Oh, what's the use? Here are the pictures. Let them tell the story.

CHARLES S. MOODY.

SANDPOINT, IDAHO.

In the Old Countries.

Wandering about Europe on a vacation trip, one sees many interesting and entertaining things never mentioned in a guide-book.

In leisurely Dublin this notice is posted in the trams: "Passengers desiring to alight from the car are earnestly requested to assure themselves before doing so that no car is approaching from the opposite direction!" Dublin is the home of the "finest English in the world."

It is a far cry from the above to the following in a Paris hotel, where they boast a microscopic elevator: "Guests are requested not to ring for the lift to go up empty and then come down again, the lift being only made

to take travelers up, not to *descend* them." Or the following, seen at a railroad station in Germany: "Defence to cross the lines without an Authorization."

"English as She is Spoke" is certainly wonderful, but no more astonishing than French as we Americans speak it.

In justice to those among whom we travel, I must say that everywhere on the Continent I have met people who speak good English, and they were most anxious to practice it, too, so that often I got very little chance to air my French or German.

EMILIE G. WRIGHT.

CAMBRIDGE, MASS.

The Tale of the Trout.

Many of the Canadian lakes and streams still furnish an opportunity for the fisherman to enjoy his favorite sport as he once did in the Adirondacks. We found a lake north of Ottawa, on a branch of the Gatineau River, where the world with its cares and worries was lost, where we were beyond the wire, the mail, and the daily newspaper. To float about in a birch bark canoe is certainly the poetry of motion on the water, and to catch fish therefrom furnishes a situation of perfect bliss for the lover of the "gentle art."

The lake abounds with large gray and speckled trout. Zotique, our Canadian guide, would not regard a large catch of fish as being a subject "worth writing home about." Zotique is "a character," and, when we complain of the cold, he tells us to "shiver ourselves into a sweat."

One day a spirit of unrestraint seemed to possess us and we fished for a record. When the day was ended and we surveyed our catch the questions arose, "What did we do it for? What will we do with our fish?" My campmate suggested that we smoke them. Not knowing anything about the job, I kindly allowed him and the guide to do all the work. My suggestions were invariably not followed. It often pays to be a know-nothing in camp; you save much useless exercise.

Perhaps fishermen generally know how to do the trick, but to me the method and result were novel and interesting.

The slime was removed from the fish by rubbing with the ashes of our camp fire. Then the fish were carefully cleaned by splitting thru the head and down the back, the heads being left on. Salt was thoroly rubbed into the flesh and the fish placed one above another and left over night. In the morning we hung them out in the sun and wind to dry, and watched to see that they were not fly blown. Meanwhile, the smoke house was built.

A hole was made in the ground, about eighteen inches in depth and three feet in diameter. Over it we set a tripod, made of small trees, taking care to leave short portions of the limbs to be used as a rest or bracket for the sticks from which to suspend the fish. Long strips of bark from a bass-wood tree were used to bind the tripod, which was then surrounded with cedar bark, the larger open-

MEMORIES OF "THE OLD COUNTRIES"
From sketches by Paul Mays, Pittsburgh, Pa.

ings being covered with pieces of an old poncho.

The fish were strung, thru the head, on sticks which reached from one stem of the tripod to another, resting on the limbs before mentioned. This was continued to the apex, so there were several rows of fish, one above another, but not touching. Thus the smoke could circulate equally about them all.

Some white birch "punk," which gives a sweet and fragrant odor and does not blaze, was ignited and placed in the hole or pit; and the smoking commenced. Only a gentle smoke was maintained, so that the fish would not turn black or be covered with soot. In this way a golden brown color was obtained. The smaller fish were "done" in a day, while the larger ones—four and five pounders—were left in for three days.

Trout treated in this manner require no cooking and may be kept, in a dry place, for an indefinite time. When desired for use, cover with a damp cloth for a few days, until

By W. S. Mackie, Utica, N. Y.
AFTER THE SMOKING

What we did was about the silliest thing you could imagine of for a farmer's family to do. We rented a pair of six by eight tents and a flat-bottomed boat, and loaded them, together with provender for a week's sojourn, and the children and ourselves, all upon a farm wagon. With this outfit we departed, a journey of about three parasangs to the shores of a sequestered and unfashionable and reedy lake. Here we pitched camp.

Perhaps some of you old timers, for whom camping out has lost its novelty, can dimly remember your first night in a tent, bedded deep with marsh hay and carpeted with blankets and "comforts." You laughed all night long; at least we did. I didn't say we laughed at anything in particular. You never do, your first night in a tent. You just laugh, and then laugh again, and then laugh some more, and keep it up. I have heard old soldiers tell of the same phenomenon occurring the first night a new company spends in camp. Silly, isn't it? But it was worth all the trouble and work the whole trip cost us, just that first night of care-free mirthfulness, or tent hysteria, or whatever it is that besets green-horns the first night in a tent. If you don't believe it, Friedd Farmer and your wife, just try it and see! You will go back to the hum-

UTICA, N. Y.

One Farmer's Way

Who would suspect that a farmer, of all persons, would ever need a vacation? His whole life is redolent of the great outdoors, with open skies and sunshine and birds and flowers. Now you are going to guess at once, no doubt, that any sane farmer would choose to take his vacation right in the middlemost midst of some crowded city, where he could see something "different," at least. Wrong you are! A trip to the city may be all right for a "pleasure exertion," as Samantha Allen would say. But as a vacation, I know from experience that it is about as refreshing as a half-day's session with the proverbial flock of pigs in the clover.

By W. S. Mackie, Utica, N. Y.
THE SMOKE HOUSE

drum grind and routine of chores and feeding and fall house-cleaning and three meals per day and work and worry, refreshed and invigorated and all the rest of it, just as truly as your city cousins.

After making up lost sleep, we spent the rest of that paradisiacal week in just being lazy. You city people can never realize what a real treat it is to lie abed until eight or ten or twelve o'clock, if you take a notion to. You have never lived for years under the necessity of getting up at five, or earlier, to milk the cows. The children ran wild, and the good wife had no dishes to wash—we used paper plates. The meals were all prepared. We read and loafed as never a farmer and his wife loafed before. Even the staid old farmhorses had a thoroly blissful time of it, and acted years younger when we broke camp and started back for home.

R. A. BUELL.

LAKE GENEVA, WIS.

Charming the Baby.

A summer vacation in the Rip van Winkle country! The chance came in the form of an invitation to share a four-room cottage that had once been a cider mill. The long, narrow living room, supported by huge axe-hewn timbers, was where the oxen used to drag in the cart—I suppose in those days it might have been called a wain—heaped high with apples for the russet cider. It may have been the very spot where dear old Rip used to get his beverage. The little house, with its sleeping porch for the baby, stood in an old-fashioned garden where forsythia, Japan-

ese quince, Missouri currant and damask and blush roses ran riot, and an althea-bordered walk led down to the ancient well-sweep. An apple orchard of neglected trees was a vision in pink in May, and locust trees towering a hundred feet overhead tossed down their honey perfume in June, which, mingled with the exquisite fragrance of the wild grape blossoms, made an almost intoxicating atmosphere. Innumerable birds added their song and across the lower strip of garden three stately deer were often seen at dawn as they cropped the scant grass under the spreading oaks and maples.

Far below the silver Hudson shone in the hot July sun, hemmed in by the Highlands on both sides, whose depth of cool shadow it must have envied as it slid up and down with ebb and flow of tide, in the pitiless glare of noon.

But more winning than the garden, gayer than the birds, sweeter than the breath of rose and grape, was the baby of the household. His mother, before her marriage, had traveled far and wide in many lands, studying folk dances and games and in training young people in the giving of Greek plays. Her baby had a strong sense of rhythm tho he had not learned to walk and had not even stood alone. One hot summer day when convention only demanded garments for grown folks, she put on a Greek dress, which means next to no clothes, and set the hot baby naked in the cool lush grass and began to dance before him. He was bewitched with the graceful steps and movements, and as tho compelled by an invisible power, rose slowly

By Isabel C. Barrows, Croton, N. Y.

DANCING ON THE GREEN

to his feet and stood fascinated. At that moment the kodak caught him, and fixed for all time the first "standing alone" of "little June."

ISABEL C. BARROWS.

CROTON-ON-HUDSON, N. Y.

Getting Down to Essentials.

A vacation must be "something different." Rest, relaxation, health are important considerations, but the gaining of new experiences is the *sine qua non*.

We are living in a world of astonishing complexity and variety; but how small is the part that we realize and know! Chained to a ledger, a bench, or a schoolmaster's desk, we have little opportunity to experience the varied life that is throbbing about us. The novelist, it is true, helps us to duplicate our lives. Thru his art we may live vicariously the life of the Labrador fisherman or that of Her Grace the Duchess of Marlborough. But second-hand experience is a poor substitute for actual observation and real living.

A vacation may not carry us far in this direction. But it is the only chance that most of us have to break the prison bars of personal isolation and to enrich our lives with a new comprehension of what life means.

It never occurs to many to do anything but what is customary and conventional, like spending a few weeks in a hotel at a seaside resort. Except in a few external particulars how little life here differs from the ordinary round of fashionable society everywhere. It is the same old program—dress, dinner, amusement, cards, dancing, fuss, feathers and silliness—in a word it is boredom punctuated by forced smiles and irrepressible yawns.

Doubtless outdoor life offers the ideal vacation. The recreative and health-giving features cannot be overlooked. I have spent many summers camping by lonely lakes, climbing mountains in the Far West, or following trout streams with rod and line. But here, too, the most precious thing is not "a good time," but deeper insight into Nature's moods and mysteries.

Therefore I do not wish to do the same thing over and over again. I wish to see Nature from a new angle and to learn more of that fascinating subject, human personality. Some of the characters I have met during my vacations have interested me even more than the birds and the flowers. What quaint specimens of human life I found when I took my boat trip down the Ohio! How delightful were the backwoodsmen, sheep herders and foresters that I saw in the Rockies!

I remember an evening camp fire under the mountain pine trees when I listened hour after

By H. T. Colestock, Lewisburg, Pa.

THREE SUMMER-TIME RECRUITS

hour to thrilling tales of pioneer life from the lips of a white-haired patriarch. I have forgotten his stories of Indian fights and grizzly bears, but the scene itself with its sights, sounds and odors, and the personality of the old man, have become a permanent possession. The weird shadows of the forest, the fitful, flaming light of the fire, the smell of pine and smoke, are blended in some mysterious way with my own personality. I am not exactly the same because on that August night I watched the fine, rugged face of an old man, aglow with the glare of the crackling fire, and listened to his voice as it mingled with the rush of tumbling water and the whisper of the night wind thru the pines.

To one who ordinarily lives among books a vacation should mean above all such contact with reality. Many teachers of literature spend their summers reading novels and plays. Delightful, no doubt! But in the end we must suffer if we continue to live, like the Lady of Shalott, in a world of shadows. Is not literature itself designed to give us eyes to see, hearts to feel, and curiosity to know? And does not experience bring us a new understanding of literature? Not scholarship alone, but a first-hand knowledge of humanity is necessary to appreciate Shakespeare; to love Wordsworth we must actually feel the spirit of the woodland.

Life is an endless, insatiable conquest for experience. Our vacation, it seems to me, gives us our best opportunity to add to the sum of life's experiences variety, breadth and a sympathetic contact with common life, and to increase our store of memory-pictures.

A. W. GOODENOUGH.

NORWALK, OHIO.

Getting Acquainted with Wild Animals

BY WILLIAM J. LONG

AUTHOR OF "WAYS OF THE WOOD FOLK," "LITTLE BROTHER TO THE BEAR,"
"BRIAR PATCH PHILOSOPHY," ETC.

HERE are three things to know, and another to do, if you are ever to get more than a fleeting glimpse of wild animals. The first thing to know is that all wild creatures, tho naturally shy and a bit timid, are not governed by fear, as we have been led to suppose. It is doubtful if anything to which we can definitely give the name of fear is ever born in an animal or hatched out of an egg. Certainly the ordinary fears of the wood folk are the result of example and experience rather than of inheritance.

The second thing to know is that every wild animal hates to be watched, and becomes alarmed the moment he finds eyes fixt intently upon him. There is an excellent reason for this. When a wild animal sees any living thing that he wants to eat, he crouches, hides, rivets his eyes upon his victim. When he finds other eyes fixed intently upon himself, he knows that a rush is sure to follow, and he anticipates the rush by taking to his heels. Whether this knowledge is a matter of deduction or of instinct, is here of no consequence. The fact, not the explanation, is important. And the fact grows eloquent when you observe the eyes of a stalking cat, or even when you put on the gloves with an untrained boxer. Looking intently into his eyes, you can always see his blow coming before he starts a muscle. It is this simple fact, that an animal hates to be watched, which gives force to the rule that you must look an animal "squarely in the eye" if you think he is going to attack you. The rule is good and well founded, tho it does not always work with domestic animals that have lost many of their wild instincts.

The third thing to know is that prac-

tically all wild animals are intensely curious, and that in moments when they are not feeding or playing or sleeping, they get most of their fun out of life by indulging their curiosity. So strong is their inquisitive instinct—for it is an instinct and is the basis of all education—that they will give over their feeding or playing to satisfy their curiosity. Their first attitude toward every new object, unless it be moving toward them with evident hostility, is invariably one of curiosity rather than of fear. Young animals are naturally more curious than the old, having more to learn; and a bear seems to me the least curious of all, possibly because he has such a big stomach and feeds on such little things, like ants and berries, that he is always hungry. Yet I once had a wild bear so near me that I could touch him; and several times since then, when watching in the berry fields, bears have discovered me and have approached rather too close for my own comfort.

The one thing to do, in view of this knowledge, is to keep still, physically and mentally still, and so take advantage of the animal's curiosity. After he once sees you, never move directly toward him when he is looking. If you must move, do so gently. If your game vanishes, stay where you are; for he is probably hiding and watching you, unless you have frightened him. Better than roaming the woods is to sit quiet in a good place and let the animal come to you. Then observe him casually, veiling your keen interest and never looking at him intently. You are to keep physically quiet, lest the animal take alarm; and mentally quiet, because excitement of any kind is as contagious as fear or any other disease of mind or body. When I am alone in the woods, the wild animals rarely show alarm. A thousand times I have had them near me, large and small, and watched them indulge their curiosity and then move slowly off, turning their

heads for a last look; but let me take another man with me, who grows mentally excited at the sight of game, and almost invariably the same animals are nervous and fidgety, and end by running away.

I began to learn these lessons years ago, as a very small boy, in a lonely berry-pasture surrounded by deep woods. The berry-pickers used to take me with them when I was too little to find my way among the tall swamp-blueberry bushes. They would place me under a tree in the woods, break off an armful of branches laden with berries, and leave me while they wandered off thru the swamp. Sitting there entirely alone, occupied with the task of filling my cup with berries, I would presently feel that I was being watched. Then I would look up to find bird or beast slipping thru the wood, halting, listening, looking, coming near me again and again to find out who I was and what I was doing there.

This feeling of being watched, by the way, is very real and dependable. Many times since, in the northern wilderness, when trout-fishing or holding lonely vigil by an unnamed lake, I have suddenly felt that something unseen was following or watching me; and invariably the feeling was true to the fact. Once the feeling was so urgent that I sprang up, and startled a big bear that had crept concealed within a few feet of me. Again, I was sitting at twilight on the shore of a lake, watching a bull moose that I had called to the open, when the same feeling said, *Get away!* I did so. And out of a fir-thicket behind me charged another bull—a morose, ugly brute that had lost his fear of man and that had previously attacked my Indian. Such a feeling—which seems hardly to depend on ordinary senses, tho it may possibly be a finer development of one of them—is not unique at all, but is common among Indians, and is often found in white men who spend much time in the wilderness. It depends, I think, largely on the faculty of keeping one's mind open and responsive to every subtle impression. When the mind is fixed on work or worry or calculation, then even the ordinary senses are dulled, and the finer impressions have not the ghost of a chance for recognition.

Later, when eight or nine years old, I

used to go alone to the berry-pastures. When my big pail would hold no more, I would fill my hat with the most luscious blueberries. These with a generous slice of bread made an excellent lunch, which I always ate near a bird's nest, or the den of a fox, or some other good place in the woods. And again the birds and animals would approach as fearlessly as when I was too small to harm them. One could see more of wild life in that hour of rest than would be possible in a week of roaming the woods. Once a crow lit just over my head, so near that I hardly dared wink. If he saw me, he gave no heed. He listened and looked for a moment, turning his head in every direction. He hopped first to another branch, and from there to the crotch of a great pine tree, where he began to uncover objects that were hidden under a mat of pine needles. Presently he took out something bright. It was a piece of glass that flashed and showed rainbow colors in a stray glint of sunshine. Then came a bit of quartz, a shell, a silver buckle, and several other objects, all bright, that I could not make out. He turned his treasures over and over, mumbling in his throat in a pleased way over each one. Then he put them all back, covered them again with pine needles, and slipped away like a shadow.

At first, I watched all these birds and animals in a child's impersonal way. They were also individuals, each one living his own happy life, knowing the woods better and having more right there than I had. My only regret was that I was too noisy and obtrusive, in spite of all caution, and frightened many wild creatures that I would gladly have known better. For the natural attitude of the child, as of the animal, is one of curiosity rather than of fear or destruction. If left to his natural instinct, a child meets every wild creature with a mixture of shyness and curiosity. He becomes an enemy of the wild, and learns to kill and destroy, not from nature, but from the evil example of his elders.

One day, while resting in the woods, I took a jews-harp out of my pocket and twanged it idly. It was a sound never heard in that place before or since. The first to come hurriedly to investigate was a bright-colored little warbler, whose

name I did not know. He lit on a branch within three feet of my head, and viewed me first with one eye, then with the other. Next appeared a jay, officious as the town constable; then more wild birds, a wood mouse and a squirrel. The secret was out. I learned consciously then that animals are intensely curious; that they will indulge their curiosity so long as one keeps perfectly quiet; and this simple discovery has led to many fascinating glimpses of wild life, and to a lifelong pleasure that is too real to be described.

These small wild birds and animals about our homes have unfortunately learned that man deserves to be feared, and their curiosity is too easily satisfied. The farther away one goes from civilization, the easier it is to play on the animals' curiosity; and in the far North, where man seldom appears, they are all comparatively fearless. Even in regions that are occasionally hunted, they seem to recognize at times a difference between the man of blood and the friend. I came once, at evening, into a camp of hunters who were in a sorry plight. They were in a deer country, and had depended largely on game to supply their table; but for ten days they had tasted no meat, and they were very hungry. The deer were too wild to be approached, they assured me. Yet I had seen a dozen animals that day, most of which could have been easily shot; and the next morning I witnessed a rare bit of deer nature. I went early to a wild beaver-meadow, and as I slipped into the open, I saw a doe and a fawn not twenty yards away. The fawn, a little buck with the nubs of his antlers just showing, threw up his head as I dropped behind a mossy log. Waiting there a few moments, I scraped some moss from the side of the log, put it on instead of a hat, and slowly raised my head. The doe was quietly feeding, but the fawn stood gazing intently at the spot where I had disappeared. His eyes instantly caught the motion as my head appeared; he started, stamped, sided quickly to his mother. At his call, she raised her head and glanced at the log. "Nothing there, son, don't worry," she said in her own way, as she went to feeding again.

"But there is something. I saw it,"

he said, swinging his head against her side. She looked again, and again went to feeding; but the little buck was positive. "Right there, under that bump! I saw it move again," he insisted. The mother looked sharply, and to interest her I moved the moss bonnet up and down. She whirled, "froze" in her tracks, and both deer stood like beautiful statues, pointing ears and noses straight at me. I slowly lowered my head and waited a few minutes before raising it again. The deer were nearer, not ten yards away, the mother ahead, the fawn holding back. He had seen something big, and was cautious, while she saw only a queer bit of moss. Slowly they came on, stamping a forefoot to make me move. When they were so close that I was afraid my eyes would betray me, I sank out of sight. I was listening for their alarm call, or the thud of their hoofs, and wondering why I did not hear it, when a gray muzzle slid over the log; and I lay my hand fair on the mother's cheek before she bounded away.

It seemed impossible that any animal could come so near a man without smelling him; yet I have many times had wild animals so close that I would not let them come nearer. Moose especially, if suddenly startled, will strike a powerful blow with a forefoot, not to attack but to defend themselves; and I have repeatedly waved my arm or thrown my hat at a bull moose when he was as near as I wanted him.

As you watch them in this quiet way, two curious facts appear. First, they do not see you clearly, even when you are in plain sight, so long as you are motionless; and second, their keen noses seem to lose track of you after you have been perfectly still for a short period. The wild animal seems to depend less on sight than upon any other sense. He will catch an unusual motion quickly enough, but when sitting quiet, with gray clothes harmonizing with the gray woods, I have repeatedly had deer, moose, bear, fox, and lesser creatures, pass within a few yards without noticing me, until a chirp drew their attention. Occasionally, indeed, their lack of discernment is almost incredible. Once, on an open lake in winter, I saw a speck moving across the snow, and stood stock still. The

speck turned into an otter, which came rollicking along in his merry way, taking two short steps on his abbreviated legs and a long slide on his ample belly—*jump-jump, slide; jump-jump, slide*, as if he were moving to music. Now all the otter's senses are extraordinarily keen, and here I was standing in the snow on an open lake, as conspicuous as a fly in the milk; yet he came straight on, not knowing me from a stump, and put one paw on my snowshoe before he stopped. Then he hesitated, looking everywhere except up into my face, before he hurried away. And I have sat still in the snow upon an open barren, without a particle of concealment, while a large herd of caribou passed slowly by me. The greater part of the herd saw nothing unusual; the rest merely glanced at me for a moment, and went on without alarm.

As for their noses, on which they mostly depend for information, I have tried numberless experiments to know how far they can detect a man. With a fair wind, not too strong, blowing in their direction, I have seen deer become alarmed while I was still a full quarter-mile away. On still days, the distance varies from fifty to two hundred yards, according to the amount of moisture in the air. But after a man has been sitting quiet for a time, I am convinced that no animal can smell him beyond a few feet, for the simple reason that, like the animal, he gives off practically no scent while he is motionless.

All brooding birds that nest on the ground depend absolutely upon this wise provision of nature. Were it not for the fact that they give off practically no scent at such a time, hardly a ground-nesting bird would ever raise a brood in a wood traversed by cats, foxes and weasels. My old setter would scent a moving quail or partridge at an incredible distance; but I have taken that same setter on a leash fairly close to where quail and partridge were brooding their eggs, and he never once detected them.

The same thing holds true of animals that build no dens but leave their young unprotected upon the ground. I have found a fawn in the woods, lying close where his mother had hidden him, and tested his concealment with my dog's

keen nose. Unless the fawn lost his nerve and moved decidedly, the dog could not find him without running almost on top of him. The nose of a wolf is much keener than that of any dog; yet I have trailed a pack of wolves that passed within sixteen measured feet of where two deer were sleeping in a hole in the snow. The wolves were hunting, too, for they jumped and killed a buck a little farther on. Yet the trails showed plainly that these two sleeping deer were not detected. Again, only last autumn, I was hidden behind a cedar root, on the shore of a lake, watching a buck with the biggest antlers I have ever seen on a deer. Suddenly two does came round the point, passed directly in front of me, came up over the bank and halted close at hand. I measured the distance afterwards, and found that from where my head rested to the nearest hoof-prints was less than eight feet. After a moment or two they grew uneasy. There was something wrong in the air, but evidently they could not define it, and I watched them move off slowly, using eyes, ears and noses in vain to locate the danger.

So, whenever I have been quiet a long time and wild animals come near without suspicion, I explain the matter by supposing that the man, like the sleeping animal, gives off so little scent that the keenest noses are at fault. Ordinarily, deer, moose and black bear are extremely timid, and vanish at the first smell of man. Yet when sleeping in the woods at night I have several times been awakened by hearing these animals near me. So long as I kept perfectly quiet, they showed no alarm; but when I sat up and began to move, however quietly, they would catch my scent almost instantly, and a rapid pounding of hoofs or a smashing of brush told the rest of the story.

There is another possible explanation of the phenomena, namely, that it is not the scent of man which an animal fears, but rather the scent of fear, excitement, blood lust, or some other abnormal quality. It sounds queer, I know, to say that fear can be smelled; but it is possible that fear or wrath distils a kind of poison which is physical and sensible. Thus, bees when angry give off a pungent odor, very different from the ordinary smell

of the hive. The same thing is true of snakes. Stir up any snake with a stick, a rattler for instance, and as he gets mad he pours off an offensive odor that travels farther than the sound of his rattles. It is at least conceivable that one man who is entirely peaceable and another man who is excited, or hunting to kill, give off such decidedly different odors that a keen-nosed animal may easily detect their characteristic quality.

That animals fear the scent of humanity, as such, is probably not true. Wherever man first goes into a wild region, the animals there show very little fear of him. Wild deer will feed around the edges of a farm all summer, having the scent of man in their nostrils at almost every hour of the day, and they are simply wary or watchful. When October comes, and men appear with rifles in their hands and death in their thoughts, the same deer become fearful, running wildly at the first scent of their enemy. And I have had occasional opportunity to test the matter in another way. I once left a baby in a little opening in the woods, while I went back a short distance to my canoe. While I was gone, three deer came into the opening. They saw the baby, and were instantly curious. The baby saw them, and was delighted. She clapped her hands, crowed and crept

toward them. They were hardly a dozen feet away. They saw and heard and smelled her, yet they walked about with dainty steps, now on this side, now on that, pointing ears and noses at the wonder, and apparently thinking of everything except fear or running away. I stood concealed, watching the scene for several minutes; then an eddy of wind from the mountain got behind me and blew toward the deer. They caught my scent instantly, and were away over logs and stumps, their white flags flying, and the baby waving bye-bye as they vanished in the dark woods.

It is possible, therefore, that it is not the smell of humanity but of something evil in humanity that alarms a wild animal. I first laid down this hypothesis after knowing a man who was simple-minded, and who loved to roam the woods by day or night. White men called him crazy, but an Indian would say that he was "touched by the Great Spirit." He was all gentleness, without a thought or possibility of harm in his nature. He had no fear, and he inspired no fear in other creatures. I saw a partridge come out of the woods and follow him like a chicken, and eat from his hand. The wild animals paid no attention to him.

STAMFORD, CONN.

The Dance of the Olives

BY CLINTON SCOLLARD

WHEN at noontide up Lake Garda (Bella Garda) creeps the wind.

Then each little silvery olive sets its nimble leaves to dance;
How they trip it and they skip it in a measure unconfined!

Hands across in blithe abandon, they retreat and they advance.

Every bough on Mount Brione (oh, the branches that are there!),

Every spray where haughty Trenno looks on Riva's fruited plain,
How they amble, how they gambol, how they part and how they pair,
To the lisping and the crisping of the murmurous refrain!

I shall see them clear in visions in a country far away,

If I close my eyes at noontide—all their wavering expanse—
And should frolic breezes whisper I shall smile and I shall say:

"Now the south wind creeps up Garda, and the olives are a-dance!"

CLINTON, N. Y.

Vacation Homes in the Woods

BY ROBERT H. VAN COURT

FOR many families the summer problem becomes each year more difficult of solution. With the closing of school comes the time when the children must be sent somewhere to give them the recreation which the year's work and the strain of city life makes necessary. The places within easy access of the city, besides being exceedingly expensive, are seldom really satisfactory. The summer hotels are likely to be stiff and formal, and generally undesirable for children accustomed to living in their own homes.

Of all phases of outdoor life, nothing, perhaps, so appeals to the younger members of the family as camping. Once they have tried it, they will find other forms of vacation living dull and unattractive. This probably accounts for the popularity of the school camps which are scattered over the country, where, under careful and trained supervision, boys and girls may spend the summer in the most healthful of surroundings, and under inspiring influences. The "Boy

Scout" movement and its rapid growth is also the result of this general getting back-to-nature and the country. To those of us who live and work amid the artificiality of city life there is something irresistibly attractive in the idea of being close to the heart of nature, wearing old clothes and living for a time the free and easy life which we like to imagine was lived before the call of the city became insistent. To children this attraction is heightened by its novelty. There is a practical side to it, also, for, tho we do not realize it, the education of the children is not interrupted by the closing of school, but is continued thru the summer as well, and lessons which might never be learned from teachers and books are absorbed in a few weeks in making friends with squirrels and birds, delving into the secrets of vegetation, learning the haunts and the habits of fishes, and exploring all the wonders which Nature reveals to those who truly seek her.

Life in the woods develops very quickly in children traits which are inculcated

ARRIVING AT THE CAMP GROUNDS

The furnishings should consist only of the bare necessities

at home, but which may not always be fully developed in its servant-aided atmosphere: courage, fortitude, resourcefulness become habits in a camp in the woods. The proper physical development of growing boys and girls calls for opportunities for actual play which seldom exist in the city; mountain climbing, sailing and swimming, play an immensely important part in the purely physical as well as in the mental and moral upbuilding of young people, and are important factors in sending the children back to school tanned, healthy and strong.

This call to the woods may be answered in the simplest of ways by camping in tents, and each year sees a great increase in the number of people who thus solve the vacation problem in the most primitive method. The ground for a temporary camping place, close to lake or river, may be had for almost nothing—often literally free of cost if it be part of a farm, whose owner thus secures

purchasers of his milk, vegetables and fruit. A little group of tents built upon wooden platforms makes a comfortable summer home where life is exceedingly simple. Raising the tents from the ground protects them from dampness, and the closing of the flaps keeps them weather-tight. If this form of camping be adopted, one large tent may serve for dining and general living purposes, and other smaller tents for sleeping quarters. They may be arranged in the form of a square, with the camp fire in the center. A separate tent may be used as a kitchen, with an oil stove for cooking, unless the cooking is to be done over the camp fire.

The furnishing of a temporary camp of this kind will, of course, be very simple, and will probably consist chiefly of cots, camp chairs, folding tables and such other household fittings as are absolute necessities. The dishes and cooking utensils will be chiefly of granite ware or some other unbreakable material.

But why not have a permanent camp

A BEAUTIFUL YET INEXPENSIVE CAMP AT LAKE PLACID

The rustic "slab" construction is particularly attractive in the heart of the Adirondack forest in New York

CAMPING MAKES OTHER FORMS OF VACATION SEEM DULL INDEED

A roof of canvas stretched over a permanent wooden frame and floor is all you require

upon the wooded shore of some lake or close to the ocean, or upon some mountain side? The necessary ground, perhaps in the heart of a forest, may be had

almost for the asking, and the buildings may be acquired or added to gradually. Let us suppose that one season has been spent by a family in tents or the most

THE ATHLETIC FIELD OF A GIRLS' CAMP

Games are not the least important part of the daily program

primitive of shacks, and that so much pleasure has been the result that a permanent camp seems to be the logical outcome. It may be that close acquaintance with one particular spot has made it seem so delightful that it has been selected as the site for an established summer home. The ground may be either leased or purchased for possession gives a new zest to the summer camp. The ground having been secured, the family will no doubt spend many delectable hours of long winter evenings in the somewhat critical study of camp architecture. All the available books on the subject will receive examination, together with many magazines showing pictures of camp life and the structures in which it is enjoyed.

A log house is always a delight, for, besides its picturesqueness, a certain glamor of romance is suggested by its very name. Most of the nation's pioneers and heroes were born in log cabins or lived in them, and in planning a home close to Nature none seems quite so suitable as a cabin built of logs. The cost of a house of logs, built in the old-fashioned way, would be excessive, however. Thus the choice narrows down to a house of boards or shingles, or one

built of "sheathing," covered with "slabs," which are merely the outer edges of logs, discarded at the mill when the logs themselves are sawed up into lumber. Both these varieties of camps have their advocates. There is something particularly attractive in a house in the woods built of rough lumber or of shingle stained any of the colors of Nature which makes it fit into the surroundings amid which it is placed, and such a building is especially successful when built with a stone chimney or when set upon a foundation of the stone which will usually be found close at hand. The "slab" house, on the other hand, is a near approach, in appearance, to the log cabin, while its cost is very much less. It is really a house built of sheathing, to which the slabs are nailed, either horizontally or vertically. The slabs used may be narrow, and applied merely as "battens" over the joints between the wide boards which cover the house. If such a treatment be employed the wide, rough planks may be stained gray, green or dark red, and the effect of the slabs, with their rough bark, against any of these colors is particularly good. Of course, a huge fireplace must be built in

THE DORMITORY IN A PERMANENT CAMP
This utility is often planned as a separate construction

THE VERANDA OF AN ADIRONDACK CAMP

Built of logs in the pioneer manner—with refinements the pioneers did not command

the living room of the camp, and if the chimney be of stone and built "outside," against the wall, the camp will possess a decorative feature of the first importance.

The house should be placed where the most inspiring view may be had and upon well drained ground, which, if possible, should slope off in several directions. One of the chief requisites of a successful camp is a broad veranda, which is as important during the warm days and evenings of summer as the open fire about which family and guests gather during cooler weather. Some inexpensive camps are provided with a veranda used as an out-of-door sleeping room, and screened with wire netting and awnings so hung upon a curtain pole that they may be drawn at will.

The foundation of the house will no doubt be very simple. Most camps are built upon strong wooden posts—preferably of cedar—or set upon large and heavy stones placed firmly in the ground. A combination of both these treatments may sometimes be used and the house actually supported upon wooden posts, with the spaces between them filled in

with stone, leaving sufficient space between the stones for the free circulation of air required to keep the floor dry. The building of a camp requires but a short time, for very rarely is there either plastering or plumbing to be done, and all the labor required for the building of any but an elaborate camp may be had in any locality, however remote. A month should be ample for erecting the buildings and preparing them for occupancy and for arranging the household appointments. A permanent camp will probably be furnished with such simple fittings as may be left in place from year to year, the supply being added to gradually. It would all the same be a great mistake to expect in the heart of the woods all the conveniences and comforts of city life. The most successful camps are those whose occupants bring to their life in the wilderness a good-humored determination to do without many things to which they are accustomed—and it is surprising how few things are, after all, vitally necessary.

Let us suppose that the camp includes a large living room, used also as a dining room; two or three small bedrooms, and

a kitchen which may be in a separate building placed a few feet from the main structure, with a roof, or an awning, to cover the space between. The inner walls of a camp are sometimes covered with slabs, where a rustic effect is desired, but generally they are left by the carpenters in a rough, unfinished condition, and stained some suitable color,

should be provided for dishes and table linen, and a folding table may be used at meal time, and between times stowed away in a few square inches. The arranging of the bedrooms is even simpler, for the beds may be merely wire cots covered with thin mattresses, and washstands and dressing stands may be improvised from wooden boxes fitted

PADDLING THE CANOE INDIAN FASHION

Nothing adds more to the pleasure of camping than even the simplest of boats.

which is often surprisingly artistic, for rough boards are possessed of a texture well adapted to staining. The floors may also be stained, altho they are sometimes painted if drest lumber has been used in laying them. A few rugs or lengths of matting may be spread upon the floors, and the windows curtained with the simplest cotton prints or with plain muslin or cheese cloth. The living room should contain a strong table for reading lamp, books and writing materials. About the study table there should be a sufficient number of comfortable chairs fitted with cushions, and a couch or two covered with blankets and piled with cushions. A cupboard or china closet, perhaps with drawers beneath,

with shelves and covered with dotted swiss or some other easily laundered fabric. The linen and blankets for the beds, and the china necessary for the washstands should be of the simplest possible description. In the kitchen there should be a good-sized table and a few chairs, and the stove for cooking may burn either wood, coal or oil. The choice of fuel depends upon the locality in which the camp is built. A wood stove will, perhaps, be more useful in most places where summer camps are built.

A refrigerator is a great convenience unless the difficulty of securing ice adds too much to the complication of camp life. However, if the camp is to be of a

A MORNING CANTER OVER FIELDS AND MEADOWS

AN EXCURSION FROM CAMP

somewhat gradual growth, its appointments being increased as circumstances permit, the building of a small ice house might well be among the first of the added investments. Its cost will be but a trifle compared with the comfort and convenience its possession will afford. Should the camp be built near a spring, the problem may be met in the most old-fashioned of ways by building a "spring house," where milk, eggs and vegetables may be kept.

Of course, in a camp in the woods one hardly expects to do much in the way of gardening, for with a wealth of vegetation at hand it may seem almost superfluous to add to what already exists. Nevertheless, some camps possess little gardens of their own, for their owners enjoy working in the ground; and in a few instances the gardens are sufficiently productive to supply the camp table with vegetables. The planting of a few flowering vines or shrubs about the camp is hardly to be considered as gardening, but the plants add greatly to the beauty of the summer home. A camp upon the shore of a body of water would hardly be complete without some kind of a boat. The best, of course, would be a small launch burning gasoline or naphtha, for such a craft, besides carrying as many as eight or ten people, will be able to travel with sufficient speed to make possible short excursions to places not too far distant. Should such a launch be unavailable, a rowboat will prove useful, or even a canoe.

An endless amount of fun and recreation may be had by campers, children or adults, who live in tents. This form of

camping is entirely practical and should be encouraged, and the development of the permanent camp idea as here outlined has been suggested chiefly for the benefit of those who, besides having some woodland retreat in which to spend vacation days, enjoy the luxury of actually possessing some one spot which may be claimed as their very own. In these days of apartment house living or of frequent removals from one rented house to another, there is a sense of satisfaction in knowing that somewhere there is a little abode which is permanent and unchanged from year to year, excepting perhaps that each year may see it a little more comfortable and complete.

It is said that each season the birds build their nests and rear their young in the same spot. If birds are endowed with the intelligence which this implies, perhaps they too love the spot which they call home and long for the coming of the spring days which see their return to it. The same feeling may be even stronger in the members of a family who return each year to the same spot in the woods to renew annually their acquaintance with the rocks and trees, the rabbits and the squirrels. The increasing popularity of camp life only proves the longing for Nature which exists in the heart of every normal man or woman. Each one of us yearns to get into green fields and woods, and to live in the pure open. Then there is the happiness of bathing in the clear waters of lake or ocean, of listening to the songs of birds and the buzzing of bees, and of sleeping under the silent stars which God has fixed in the heavens.

NEW YORK CITY.

The Vacation Period

BY CHAMP CLARK

SPEAKER OF THE HOUSE OF REPRESENTATIVES

NOW comes the vacation period, the season of rest, when schools, colleges and universities end their terms and turn the teachers and students free, when thousands go to Europe and other thousands to the mountains and seaside

and woods and the rural places in our own country.

As a rule the people of America take less rest than any other people under the sun — more's the pity, for rest not only adds to the pleasure of living and generates energy, but it prolongs life. Almost everybody in this country is forever in a rush and a hurry. Charles Dickens said that Americans go to dinner at the same gait at which other people travel to a fire.

The promise of rest runs thru the Bible like a thread of gold. The first time the word "rest" occurs in the Bible is in the second verse of the second chapter of Genesis:

"And on the seventh day God ended his work which he had made. And he rested on the seventh day from all his work which he had made. And God blest the seventh day and sanctified it because that in it he had rested from all his work which God created and made."

And from that passage to almost the last verse of the Book of Revelation the

word "rest" is constantly occurring. The Twenty-third is the most beautiful of all the psalms of David. The most beautiful verse in that psalm is the second:

"He maketh me to lie down in green pastures; he leadeth me beside the still waters—"

Of all the promises which the Saviour made in his sermons and conversations, one of the most forcible was the one contained in the twenty-eighth verse of the Gospel according to Saint Matthew:

"Come unto me all ye that labor and are heavy laden and I will give you rest."

He follows that up with another promise in the twenty-ninth verse of the same chapter:

"And ye shall find rest unto your souls."

It is really a great pity that everybody cannot rest periodically. They would last longer and accomplish more, and would derive more pleasure out of existence. Most people rest on the Christian Sunday, or Lord's Day, which has taken the place among Christians of the Jewish Sabbath, but few ever reflect that the seventh day of rest is founded upon a great philosophical principle. This was demonstrated beyond peradventure

when the modern Argonauts went across the plains in 1849 in search of the Golden Fleece. Some of them were so anxious to reach the Pacific Coast that they drove steadily forward seven days in the week, resting not at all, while others,

HON. CHAMP CLARK
Speaker of the House of Representatives

either from force of habit, early education or religious bent, rested on Sunday. It turned out that those who rested on Sunday reached the gold fields first, with men and beasts in better condition than those who failed to rest at all.

Congress grants to Government employees a thirty days' leave of absence on full pay in each year, not because Senators and Representatives believe the Federal Government is an eleemosynary institution, but because they believe correctly that vigorous, healthy men and women can do more work in eleven months than those who are fagged out can do in twelve. The same philosophical principle underlies the eight-hour laws. Benjamin Franklin had some vogue for wisdom in his day, and he declared that the day ought to be divided into three equal parts: "eight hours for work, eight for sleep and eight for recreation." It is also worthy of note that Ancient, Free and Accepted Masons believe in that theory.

It was one of the boasts of Napoleon that he needed only four hours' sleep out of the twenty-four, but he died an old man at fifty-two. Thomas A. Edison says that three or four hours' sleep each day is sufficient. It may be for him, but there are very few Edisons in the world. There never was a truer saying than that "All work and no play makes Jack a dull boy." And it is a common utterance worthy of acceptance that "the bow which is constantly strung loses its elasticity." The idea contained in this last saying applies to both the human body and mind. I remember how greatly surprised I was when as a boy my father told me that a man could walk farther in a given length of time up hill and down hill, and with less fatigue, than on a level road like a towpath. I asked him how such a thing could be true, and he patiently explained to me that in walking on a level the strain was on the same set of muscles all the time, but in walking up hill you rest to some extent the muscles most used in going down hill and vice versa.

Of course the particular form of rest depends on many things: inclination, financial capacity to do as you please, and the circumstances of one's life. A great many people seek the sea for their

rest. Others take to the woods. One of the finest passages in the English language is that of Lord Byron, in which he praises both the ocean and the woods:

"There is a pleasure in the pathless woods,
There is a rapture on the lonely shore,
There is society, where none intrudes,
By the deep sea, and music in its roar;
I love not man the less, but Nature more.
From these our interviews, in which I steal
From all I may be, or have been before,
To mingle with the Universe, and feel
What I can ne'er express, yet cannot all conceal."

Thousands of our people go to Europe to spend their holidays, many of whom have never seen the wonders of their own land. It does not lie in the mouth of any man to object to his fellow citizen's crossing the Atlantic to see the sights, but it puzzles one to know why an American, who has never seen Pike's Peak, Mount McKinley, Lake Tahoe, the Yosemite, the Mississippi River, Mammoth Cave, and scores of others of America's wonders, should rave about Mont Blanc, the Matterhorn, the Jung Frau, and many other of the objects of interest in the Old World.

More and more it is becoming the custom of people who can afford it in this country to have mountain and seaside homes, and more and more it is becoming the custom of people who cannot afford these luxuries to camp out in the mountains or in the woods or by the river or the seaside.

Within the last quarter of a century a new and interesting way of spending one's vacation has been invented in this country. It is the Chautauqua. Started first in a humble way as a religious institution, it has spread over the country, especially thru the great Central West, until it has become exceedingly popular and has had a great influence in more ways than one.

A great many newspaper wits shoot their shafts at Chautauqua lecturers, and certain purse-proud editors undertake to make it a sin for a public man to lecture for pay. They think it the height of sarcasm to refer to a public man as a Chautauquan. There is one great virtue in Chautauqua money. It is clean money. You do not have to explain where you got it. If a man does not desire to go to hear a lecture, there is no

law to compel him to do so. These purse-proud editors seem to have the idea that no man is fit for public life except a rich man, but that is a very great mistake. Just why it is improper for a public man to make some honest money lecturing, while it is confessedly a laudable performance to make money writing for magazines or writing books, is one of those things which it is hard to find out. And to put it more broadly still, just why a public man should be criticised for doing any honest work of hand or brain to eke out his salary and to lay up something for his wife and children is utterly inexplicable.

The lecture business divides itself into two parts: what I call the Chautauqua season and what I denominate the cold weather season. The latter continues from the time in the fall when the weather is cool and the nights are long enough for the audience to stay indoors and listen comfortably to a lecture, and extends to about the middle of March, when for some unaccountable reason it suddenly ends. The Chautauqua season begins about the 1st of June and ends about the 1st of September. The Chautauqua has really come to be a great literary, religious, political, scientific, musical camp meeting system. It is generally held under a tent or in a tabernacle almost always located in a beautiful grove, and, according to William Cullen Bryant:

"The groves were God's first temples, ere man
learned

To hew the shaft and lay the architrave,
And spread the roof above them—ere he
framed

The lofty vault, to gather and roll back
The sound of anthems, in the darkling wood,
Amidst the cool and silence he knelt down
And offered to the Mightiest solemn thanks
and supplication."

In these groves a great many people build cottages and others erect tents, and there they spend a week or ten days enjoying the Chautauqua and remain as long after as they feel like doing.

The Chautauqua program is arranged with the intention of being both instructive and entertaining. It generally consists of music, recitations, in both prose and poetry, both humorous and serious, lectures which are supposed to be on interesting themes—of late years the lec-

tures have run more and more to political, scientific and sociological subjects. There are also lectures of travel—in fact, on almost every subject toward which good men and women turn their thoughts. Within the last eight or ten years both the lecture course in what I have denominated the cold season and the Chautauqua season have run somewhat to political debates. I myself have debated in these courses with General Grosvenor, Colonel Hepburn, Senator Dolliver and the Hon. Charles B. Landis. Some of the hypercritical editors to whom I have referred have denominated these debates as "hippodrome performances." If any editor or anybody else is harboring the delusion that debating with General Grosvenor or Colonel Hepburn or Charley Landis is a holiday performance I advise him to try it on, and when he gets thru he will know a great deal more than when he began. Dolliver is dead and gone. God bless him in his grave! He was one of the great orators of his time, and in his latter years developed into a wonderful debater.

Let us see at what class of public men the sneer of being a Chautauqua debater or lecturer is directed. In the last few years there have appeared on the lecture platform besides Grosvenor, Hepburn, Dolliver and Landis, such men as Senator La Follette, Senator Cummins, Senator Long, Senator Curtis, Senator Burkett, Senator Brown, Senator Tillman, Senator Bob Taylor, the well beloved of millions of people, Senator Borah, Representatives DeArmond, Murdock, Hobson, Henry George, and others.

These men have all lectured while holding office. Nobody will deny their ability. None of them was rich. Each of them needed the clean money to be made by lecturing without neglecting his public duties. In addition to these there is quite a number of distinguished public men who, after they quit public office, turned to the lecture platform. Among these were Vice-President Schuyler Colfax, Col. William Jennings Bryan, Senator John James Ingalls, Governor Hoke of Kansas, Governor Glenn of North Carolina, Governor Folk of Missouri, Governor Warren G. Harding of Ohio, Governor Hanley of Indiana.

There are many more, but these names

will suffice with sensible people to prove that there is at least nothing improper or disreputable in a public man's lecturing for pay at Chautauquas or in lecture courses. Of course the Chautauqua had not been invented in the time of Charles Sumner, but nevertheless he lectured for pay in lecture courses, and Wendell Phillips, who never held public office and who perhaps never wanted one, not only established a worldwide fame on the lecture platform, but took in large sums of money.

Not long since a friend of mine, irritated by the abuse which has been heaped upon me because I had the temerity to become a candidate for the Presidential nomination, and thinking to console me, dug up some copies of New York papers published a few days after Abraham Lincoln was nominated for President in 1860. They were full of the foulest abuse of him, and among the other evidences of his utter unfitness for the Presidency which were cited was the alleged fact that he had delivered lectures for pay. If Isaac Disraeli could return to earth and should get hold of these criticisms on Abraham Lincoln, not only in 1860, but also in 1864, not only in Democratic papers, but in Republican papers as well, he would incorporate them in a new and enlarged edition of his "Curiosities of Literature."

So far I have confined my remarks to public men lecturing for pay. There is a multitude of talented men and women who hold no official positions whatever, who educate, instruct and delight multitudes from the lecture platform. I am certain that my younger friends upon the Chautauqua circuit will not object if for want of space I fail to mention them and name only two grand old men of the lecture platform: Col. George W. Bayne and "Sunshine" Willetts, the latter of whom is past the Psalmist's extreme allotment of fourscore years, but is still go-

ing about doing good. These are two of the finest gentlemen the Lord ever made. They are apostles of optimism. They are the proponents of all things good and pure and noble and patriotic. One of the most eloquent passages that I ever heard fall from human lips I heard Colonel Bayne deliver at Forth Smith, Ark., on the closing years of Thomas F. Marshall's life. It was a wonderfully graphic and pathetic picture which he drew, and one which will some day be published in the speech books as a fine sample of American oratory.

Some of the wiseacres who criticise Chautauqua lecturers may not be aware of the fact, but nevertheless it is true, that the Chautauqua has been a powerful force in directing the political thought of the country, which is largely sociological in these latter days. Perhaps these wiseacres might be benefited if they would turn their attention to a study of the results of Chautauqua lectures rather than undertaking in their self-sufficiency, ignorance and malice to smirch and belittle the Chautauqua lecturers.

I have felt free to take up the cudgels for them in this article because I have ceased to lecture myself—at least temporarily. Not because I am ashamed of the business or because there is anything for which to be criticised in legitimately pursuing it, and not because I have become rich, for I have not, but because the duties of the Speakership are so onerous and so multifarious that I have not the time to devote to lecturing. I defend the Chautauqua and the Chautauqua lecturer, with whom I have been associated, because they constitute as fine a group of men and women as can be found among the splendid citizenship of America. I have a deep and abiding interest in them, and bid them a hearty Godspeed in their work.

WASHINGTON, D. C.

Housing the Automobile

BY BERWYN CONVERSE

THE increasing use of the automobile is doing more than any other one thing to make possible the widespread and growing interest in country or suburban living. One may live in the real country, far removed from the city's strife, and yet, with the aid of his motor, be in close touch with his business and the activity of his office. If his home be in the suburbs, nearer the city, he is wholly independent of trains and can

places are equipped with garages fully as complete as those open to public patronage, and are fitted with every possible convenience and device for making any but the most extensive repairs; such garages are maintained with at least one chauffeur and one or two "helpers," who are usually skilled in making repairs. Upon the other hand, the man who runs and cares for his own car will find the simplest of garages sufficient for his

A GARAGE AT SHIPPAN POINT, CONN.

Space is provided for chauffeurs' rooms or for a laundry

make his own time-table and vary from schedule as often as he desires. Moreover, entire districts of beautiful country which have hitherto been inaccessible, either by train or trolley, are now available for living in to the man who is the owner of even the simplest car.

The possession of an automobile naturally involves its care and its housing, which may be just as elaborate or as simple as one desires. Large country

needs, for the building of automobiles is now so thoroly understood and so carefully done that they are easily kept in order if reasonable care be exercised in operating them. Then, too, repair shops are now so numerous that one is within reach almost anywhere, should it be needed, and with many automobilists the caring for a car is a very pleasure.

The building of a garage and its location upon the home grounds should be

A TYPE OF THE TWO-CAR GARAGE
Built of logs or "slabs," on Staten Island, New York

carefully studied, with due thought both as to its own purpose and its relations to its surroundings. It should be placed, of course, quite near the residence, and a broad driveway should lead from the street to the entrance of the garage, where space should be provided that the car may be turned without danger of injury to flower beds, grass or shrubbery. If one's home be built upon a corner lot of small dimensions, the garage should be placed at the rear of the lot facing the side street and as close to the sidewalk as may be convenient, for in such a location there will nearly always be sufficient space for turning the car in any position desired. Sometimes the home grounds are upon a grade so steep that if the garage be built near the street the approach to it must be at an inconvenient angle. In such cases it might be placed at the street level, either by building it into the bank or by grading down the ground about it and sodding the embankment to prevent its being washed.

A garage should be grouped with other buildings, should there be any, in such a way that a dignified architectural

effect may be secured, instead of scattering them about over the grounds. This can almost always be done by judicious planting of shrubbery or hedges, or sometimes by connecting the buildings by fences, trellises or panels of lattice work. Often the garage is made a part of the residence itself, frequently being placed in a wing, where it increases the apparent size of the house and aids in creating the architecturally "balanced" effect which is desired in planning residences of a somewhat formal nature. Connecting the garage with the house is especially to be desired where the car is apt to be used at unexpected times and upon short notice. A country physician, who is often obliged to make calls at night, has built his garage so that it connects with his office, and it is possible for him to enter his car, press the spring which opens the garage doors, and arrive at his patient's home without going out of doors.

The home garage may well be the most simple and unobtrusive of buildings, and is usually planned to agree both in design and material with the residence to which

THE GARAGE ON THE STREET LEVEL

This plan is particularly adapted for a narrow lot upon a steep grade

it belongs. It may be built, therefore, in any style of architecture desired, and of brick, stone or frame, as circumstances may require. After all, little is necessary for such a garage but shelter for the car, and the smallest possible additional space for the tools which are required for its use. A garage of sufficient size for two cars can sometimes be erected for little more than the cost of a one-car building, and space for the housing of an extra automobile is always desirable, even if but one car be owned. Where a garage is planned to hold two motors there should be a door for the use of each car. If there is not a separate entrance to the garage, a small door should be placed in one of the larger doors, for use in cold or stormy weather.

For a one-car building the inner dimensions should be about 9 by 15, and the roof or ceiling should be about 10 feet from the floor. A door of sufficient width and about 9 feet 6 inches high should be provided, either hung upon hinges or upon rollers which enable it to slide back and forth. The floor of the garage should slope very slightly toward

one or two drains, that the water used in washing a car may be quickly carried away. Some device should be arranged for hoisting an automobile from the floor when repairs are to be made. This may be done by means of a chain tackle worked by hand power. In many garages a "repair pit" is arranged. This is merely an excavation about 10 by 4 and about 4 feet 6 inches deep. When repairs are to be made to the car's gear the motor is rolled into position over the repair pit, which affords sufficient room for the necessary work upon the machinery. The repair pit should be provided with electric lights attached to cords.

Unless a workroom or a tool closet is planned for, there should be a strong table in one corner of the garage, for use in making simple repairs, and upon the wall over the table there should be a few shelves or a small cabinet, for the tools necessary for even the simplest of garages. The space below the table may be used for storing tires or other things which will be needed. A window near this little work bench will be a great convenience, and an electric light should be

provided, if possible, for working after dark. A sink, with hot and cold water attachments, would also be of the greatest help. Where a somewhat larger building is desired, a room for a chauffeur might be included, and a separate tool room provided, with perhaps additional storage space.

The portable building idea has been applied with excellent results to the needs of automobilists and many firms who are dealers in these buildings are making a specialty of supplying them for use as

it may be enlarged or added to, for such buildings are planned and constructed in "sections" and the purchase of a few additional sections of floor, walls and roof will provide for the increase of housing capacity should it be required.

Of course stables are very frequently converted into garages at almost no trouble and expense. The stalls for the horses are taken out and the floor space thus gained adds greatly to the capacity of the garage. The small windows in the stalls are generally removed, the har-

A TINY ONE-CAR GARAGE AT FLUSHING, LONG ISLAND
When built upon a corner lot the garage should face the side street

garages. They are made in a great variety of designs and sizes and are constructed of galvanized iron, steel or wood. One may select from a catalog such a building as will meet his requirements, have it shipped to him in sections from the factory and set up upon his own grounds in a surprisingly short time and at a very moderate cost. A garage of this type would be particularly desirable for a family living in a home which is leased or rented, for it can be very easily taken apart, moved and re-erected elsewhere should a change of home be made. Another desirable feature of the portable garage is the ease with which

ness room made into a tool room and the rooms designed for a coachman fulfil the same function for a chauffeur. The loft which was intended originally for the storing of hay may be utilized as a storage space for the numerous utilities which are apt to accumulate in the storage room of a garage upon a country or suburban place. In at least one case, however, the hay loft of a stable which has been made over into a garage has been transformed into a wonderfully attractive billiard room where no hint is now given of the humble use for which it was primarily designed.

NEW YORK CITY.

Butterfly Acquaintances

BY ANNA BOTSFORD COMSTOCK

AUTHOR OF "WAYS OF THE SIX-FOOTED," "HANDBOOK OF NATURE STUDY" ETC.

"LEAFLESS, stemless, floating flower" is the poet's name for the butterfly, and surely no flower of the field or forest is more exquisitely colored or so intricately marked as are many of our common butterflies. Few people know more than two or three of these "floating flowers," altho the ability to exchange greetings with the butterflies one meets, adds fully as much to one's psychic income as to exchange courtesies with the birds, or as to call the flowers by name. And the task of learning the butterflies is far less than in case of the others, for there are few localities which have more than twenty-five common butterfly species. Thus, armed with an opera glass, a butterfly book and an insect net, to capture specimens for closer but harmless examination, any one in a few days may be able to call by name most of the common species. The making of a butterfly collection is interesting to the entomologist, but to the lover of living creatures this killing of butterflies is distasteful and it is wholly unnecessary, for the colored pictures of butterflies in books are sufficient for identification.

There is far more of interest to learn about the butterflies than about either birds or flowers, because every one of these insects has two widely different incarnations; and there are as many distinct phases to this double life history as there are species. In general terms, this history begins with a minute egg, often so exquisitely colored and sculptured and ornamented that it seems

to be convincing proof that beauty is its own reason for existing, since the pattern of this tiny gem can only be seen with a microscope. This egg is always deposited by the mother butterfly upon the proper food plant, for no other creatures are so fastidious about their food as insects. If the mother butterfly were not a good botanist and should lay her egg upon a willow leaf when it should have been laid upon the leaf of wild plum, the little caterpillar would die of starvation rather than take

THE MONARCH AND THE VICEROY
Orange-red, with veins outlined in black. The wings are bordered with black, enclosing a double row of white spots. The Viceroy (above) imitates the Monarch in color.

a meal from this food plant strange to his ancestors.

From the egg hatches a caterpillar whose business is to eat and grow; and like all insects, this growing results in a series of crises, for the insect's skeleton is on the outside of its body, and its soft

growing parts all within it. After feeding awhile, the caterpillar finds himself too full for comfort, and he seeks a secluded spot and bursts open his skeleton skin and pulls himself out of it. His new skin formed under the old may differ from it in color, but it is always elastic at first and stretches to fit comfortably and then grows hard, and in its turn is shed. The caterpillar is soft and helpless while he is thus changing his clothes, and so often falls prey to his enemies.

Finally the caterpillar reaches his full growth, and then weaves a knob of silk from the spinneret near his mouth, making it fast in some protected place; and some species, in addition, spin a silken sling or halter for future needs. This done, he hangs himself up "by the heels" to the knob and again sheds his skin. But what a transformation! He is now a compact, angular, legless object, usually beautifully marked with soft, blending colors, and often dotted with shining silver or gold. Because of this gild-

ing, butterfly pupæ are called chrysalids, from the Greek word *chrysos*, gold. Butterfly caterpillars do not spin cocoons to protect them during the pupa state, as

A BUTTERFLY CHRYSALIS

do the moths; butterfly pupæ are always naked and thus may be identified.

But within this inert, suspended object wonderful changes are taking place. The organs of the caterpillar are being torn down and rebuilt in butterfly form, so that when the pupa skin breaks open there comes from it, with obvious effort of its perfectly new legs, a sorry looking, crumpled-winged creature, which shudders and shakes and trembles as if the nightmare of his narrow prison still frightened him. But all this shuddering is merely muscular effort to shake out his soft wings so they may harden in the atmosphere; and after a short time he sails over trees and house-tops as if he had always been a glad "child of the air."

Because of this varied existence, the butterfly problem is complex. The egg must be laid on the food plant and protected from the sight of enemies. The caterpillar must have plenty of food and be protected from the birds and other enemies. The pupa must be protected from the sight of enemies. The butterfly must be beautiful and yet elude the birds, and then in our Northern climates there is the problem of passing the winter safely. Thus it may be seen that a "butterfly existence" is a misnomer for a life of frivolity, for each butterfly we see dancing in the air has escaped numberless perils, and each species has fought its way to the ranks of the "fittest" af-

THE GREAT SPANGLED FRITILLARY

This butterfly has an expanse of about three inches. It is orange, fading to a dull brown late in the season, marked with black, the wings shading to brown next to the body.

ter its own manner and with its own weapons of defence and finesse.

One of the most favorable places for beginning the study of butterflies is a country road that winds up hills, thru valleys, along creeks and thru woods, for such a road is haunted by many of the most beautiful of these insects. If it is a road with puddles, we shall find about them swarms of yellow butterflies; these are gay, social creatures, that love to play with each other in the air, and above all, do they love a social drink in companies at the road puddles. If we

THE ROADSIDE BUTTERFLY

This old friend is of a silvery yellow, its wings having a blackish border

examine the mud about these places after we have scared a flock of these butterflies away, we find it full of "pin holes," where they have thrust their long, sucking tubes in eager search for moisture. The caterpillar of this Roadside Butterfly is about an inch long, greenish-white, and feeds upon the leaves of clover, vetch, and like plants. So effectually does it hide itself that it is rarely seen.

If our road leads between thistle-infested fields we have an ideal hunting ground for butterflies, for the abundant nectar in the thistle blossom is much loved by many of these insects; in fact, the thistle blossoms are veritable roadside restaurants for them. Perhaps the first we shall find will be one of our four common species of Fritillaries, with copper-brown wings, checkered and bordered with black; on the lower side the wings show many silvery spots. As children we considered these butterflies the nabobs of the insect world, because they carried so much butterfly money, and our pet diversion was to imprison them for a brief but agonizing moment while we counted their dollars. Two

species of these, the Great Spangled and the Silver Spotted Fritillaries, are large butterflies with an expanse of three inches. Of the two smaller species, the Silver Bordered has plenty of butterfly money, and the Meadow Fritillary has not a dollar nor even a dime upon its wings.

There are three species so addicted to the tippie of the thistle blooms that they are called the Thistle Butterflies. One, very common, is the Red Admiral, and it is more likely to be a frequenter of gardens than its companion species. Its blue-black, white-spotted front wings have each a slanting band of orange-red, and the hind wings are margined with orange; the slanting band, when seen from the lower side, is rich, deep rose

SILVER BORDERED FRITILLARY (ABOVE) AND MEADOW FRITILLARY (BELOW)

The expanse is $1\frac{3}{4}$ inches, the color orange yellow spotted with black

color. The Red Admiral has an incisive, strong flight, as might be expected of a butterfly which, as a caterpillar, was nourished upon the leaves of nettle; if we notice a nettle leaf that is wilted we are likely to find it the tent of this caterpillar, which has caused it to droop by nibbling its petiole.

The two other thistle butterflies are

called the Painted Beauty and the Cosmopolite. Both of these have their wings golden orange and brownish-black above; and both have the hind half of the lower side of the front wing ex-

THE RED ADMIRAL

The expanse here is a third greater than the illustration. The color is purplish black with white spots near the tip of the front wings, while an orange red band crosses the front wings and borders the middle part of the hind wings.

quisite rose pink, just to match the thistle blooms. The two species are very similar, except that the lower side of the hind wing of the Painted Beauty shows two rather large eye-spots, while the Cosmopolite has a row of five smaller eye-spots. Both of these have spiny caterpillars, which feed upon life-everlasting, where they weave bits of the leaves together to protect them from observation; that of the Cosmopolite also feeds upon thistle, and perhaps because of this widespread food-plant, the Cosmopolite is more widely distributed over the face of the earth than any other butterfly. On its rose-lined wings it drifts about our home pastures and likewise above the pastures of the Rocky and the White Mountains, the Alps, and the mountains of Asia; it also haunts the open fields of Italy, Spain, Mexico, India and New Zealand.

It would hardly seem that black would be an attractive butterfly color, but we have several beautiful black butterflies haunting woodsy roadsides; of these the Mourning Cloak is the most common and is the earliest butterfly of spring, since it hibernates hidden beneath the bark of trees and appears flitting about the woodland glades when the first warm sunshine awakens it with the hepaticas. Its wings are brownish-black, with a broad, yellow border, sprinkled with brown, and just inside the border a row of blue spots. Its caterpillars are spiny fellows and feed in swarms upon elm. They are velvety black, ornamented with white raised dots and central rows of red spots. We chanced to discover these caterpillars may be affected by song, if the singer possesses a bass voice. As soon as a certain brood we were studying heard their favorite notes the whole family would rise as one, lift up the front part of their bodies, and would shake and tremble as if affected with palsy.

The Swallow-tail butterflies are lovers of glades; the graceful prolongations of their hind wings give them a distinctly elegant appearance. The Tiger Swallow-tail is perhaps the best known of these; it is the large, yellow butterfly, with black borders to the wings and with tigerish stripes across them. It has an interesting foible, which renders it a favorite with fishermen. It is very fond

THE TIGER SWALLOW TAIL

The spread is from $3\frac{1}{2}$ to 4 inches, the color straw yellow marked with black. Blue and red spots mark the hind wing.

THE RED SPOTTED PURPLE

The expanse is about three inches. The upper surface of the wings is velvety indigo—black tinged with blue or green iridescence. The border rows of spots on the hind wings are a light iridescent blue, while the wings on the under sides show red spots.

of tobacco smoke and will play around on the leeward side of a smoker, seeming to get the greatest pleasure from this second-hand dissipation; and if the smoker will sit still, this butterfly will light upon his head or arm for the sake of getting a stronger whiff.

The caterpillars of all the Swallow-tails have an interesting means of protection, bright-colored, fleshy scent-horns just behind the head, which can be protruded at will. These horns are pockets full of odoriferous material, and when they are protruded they are like pockets turned wrong side out, throwing the scent upon the air; this odor is always strong and usually very disagreeable. The caterpillars of the Tiger Swallow-tail, and of some other species also, have another means of protection. The thorax is greatly enlarged, and upon it, painted in insect pigment, two fierce eye-spots. They are not eyes, but are excellent imitations, and a glimpse suggests the prox-

imity of a wicked, little green snake. Some butterflies have the margins of their wings so angular that they look as if they had been snipped by Nature's scissors. These butterflies are called the Angle-wings; members of one genus of the Angle-wings are called the Polygons. They are especially interesting, because in the intricate pattern worked out on the lower sides of their wings in grays and purples there is embroidered on each hind wing a silver initial, although in many instances this initial more resembles a punctuation mark.

Over the road fence in sterile side-hill pastures may be found the gayest of all the midget butterflies, the American Copper. It has orange-red wings, dotted with black, measuring when fully expanded scarcely more than an inch. Its spindle-shaped caterpillar lives upon sorrel, and the tartness of its food seems

to affect the disposition of the butterfly, which is saucy, alert and fearless, and flies at us as if certain that by such fierceness it can frighten us away. To name all the butterflies that haunt a country road would require too much space. But their acquaintance may be made, and, in the making, one

may learn the interesting life-stories of these exquisite insects.

ITHACA, N. Y.

THE BANDED PURPLE

The color here is a soft chocolate-brown crossed by a broad white band, and the expanse is about three inches.

THE PAINTED BEAUTY

The under sides of the wings are marked with rose-color. Seen above these butterflies are orange-red marked with black; tips of front wings spotted with white.

How to Reach Nature During This Season's Vacation

BY EDWARD F. BIGELOW

PRESIDENT OF THE AGGASSIZ ASSOCIATION.

YOU have been going to the country for season after season. At the beginning of each vacation, you have determined to get more from nature than you have obtained in any previous year, but somehow, when you arrive at your country home, there are many cares, many little things that must be attended to, that divert your attention from the real thing, which is a better knowledge and an increased love of Nature, and a greater inspiration from her.

Perhaps you return to the city in September, with a feeling of disappointment, because your vacation has not been all that it should have been. You had become so thoroly permeated by the atmosphere of the city that when you went to the country you failed to escape from the conventionalities and the customs of the town. But perhaps this spring you have been reading nature study articles, or some friend, who has successfully come into touch with nature in previous seasons, has inspired you to make the attempt this year with increased vigor, and with a determination to remedy past mistakes.

But again, perhaps you have been troubled and discouraged by the vastness and indefiniteness of the field. Just how to go at the subject has not been clear to you, but this year you have determined to do the thing right, and to welcome cordially any definite help in that direction. To help you to avoid the repeating of your past sins of omission or of commission in failing to obtain the most and the best from your country vacation, is what the editor of *THE INDEPENDENT* evidently had in mind when he requested the writer to give you definite assistance. I readily comply, and tell you, first, to be yourself, and to take an interest in the things that interest you. Do not try to imitate anybody else. If you like snakes, search for

them and study them. If you like snails, study them. Both snails and snakes are lovely to those that love them. I know a man who was born and for thirty years lived in a region in which harmless lizards abounded, yet he was always afraid of lizards. Never read a book unless the book pleases you. If you like Greek, and I believe that some people do, you may enjoy the reading of Aristotle, or Epaminondas, or Plato, or even the study of the irregular verbs. If you do not like Shakespeare, do not try to imagine that you do. Be frank with yourself and with your friends. If you do not like snails nor Greek, do not pretend that you do.

The second rule is like unto the first: don't try to study the things that are not there. You may have read an interesting article on some particular aspect of nature, and may have determined to specialize on that. Don't do it, unless those things are available in the particular part of the country in which you are to spend your vacation. If you think that you would enjoy the study of rocks, do not go into the New Jersey pine barrens, where the sight of a stone the size of a robin's egg would fill a native with amazement; if you want to study hydraulics, avoid the alkali plains of the far West. Go frankly and candidly, just as you are, to find and to know the things that are there. If your country home abounds in ferns, and you like ferns, get a book on ferns to help you. The same principle applies to every division of nature. Do you know that there are more than one kind of grass in even your own front lawn? Do you know that there may be as many as a dozen kinds of grass in the nearest meadow? You never thought about that? Perhaps not; but, with a pocket lens, a good book on the botanical structure of the grasses, and a convenient meadow, you will find the summer too

short for all that the grasses can give you to do. The subject is not too difficult to be conquered without aid, nor so easy as not to be worth conquering.

For twenty-five years I have been studying nature thoroly and systematically, but when I see a list of books on the subject I am at a loss to know why these particular books were selected and others omitted. The reader of this article may be as greatly surprised at those that I am recommending. Not long ago I lectured in New York City, and a librarian in the vicinity sent a long book list for me to read, and to recommend to others, if they would know further of the subject. To my surprise, upon looking down that list, I found not one with which I am familiar, with the exception of two or three that I know to be inferior, antiquated or obsolete. There are certain books that are modern and possess the spirit of enthusiasm; they are animated, they are beautiful, but they are seldom in such lists as come to my notice.

I recently sent to an artist an order for a drawing of a frog. The result was a picture that I might have worshiped without sin, for it represented nothing that ever existed in the heavens above, or the earth beneath, or in the waters under the earth of America. How could any artist go to an old English book, when he might have access to that perfect gem of a book by Miss Dickerson, "The Frog Book," published by Doubleday, Page & Co., Garden City, Long Island, New York? Do not go skirmishing in the libraries for a list of books on frogs, if you want to study frogs. You will find Miss Dickerson's book enthusiastic in spirit, and beautiful in illustration, and helpful. If you care to go into the subject a little more scientifically, get Holmes's book, "The Biology of the Frog," published by the Macmillan Company, New York City. But you will not need that unless you are going to work in a technical laboratory, after you have studied Dickerson's book for four or five years.

If you intend to start an aquarium at your summer home, do not go to England for any of the host of handbooks published there. Get the best, and that is, "Goldfish Breeds and Other Aquarium

Fishes," by Wolf, published by Innes & Sons, Philadelphia, Pa. And by the way, that firm is beginning the publication of a magazine devoted to the aquarium. There is also another excellent American book on the aquarium, not so extensive as Wolf's, entitled "The Freshwater Aquarium and Its Inhabitants," by Eggelling and Ehrenberg, and published by Henry Holt & Co., New York City.

If you plan to study the birds, you need and need only the books by Frank M. Chapman, published by D. Appleton & Co., New York City. He has a popular, illustrated handbook, and also a manual on the subject.

For plants, outside of the regular manuals of botany, there is an excellent handbook by Mathews, published by G. P. Putnam's Sons, New York City. Of course, every one knows of the Dana book issued by Charles Scribner's Sons, New York City.

If you are going to study shrubs or trees, get the Keeler book, also published by Charles Scribner's Sons, or, for a more extensive manual, "Handbook of the Trees of the Northern States and Canada East of the Rocky Mountains," by Romeyn B. Hough, Lowville, N. Y.

If you intend to take an interest in ferns, send to Willard N. Clute, Joliet, Ill., for full particulars. He has done more to popularize the study of ferns than any dozen other people in this country.

If mosses appeal to you and there are damp, shady places in your vacation country, write to Dr. A. J. Grout, New Dorp, Borough of Richmond, New York City. He will give you full particulars as to the society formed for their study.

If you are to study insects, get Comstock's "Manual for the Study of Insects," published by the Comstock Publishing Company, Ithaca, N. Y. You will also find three good insect books in The Nature Library from the press of Doubleday, Page & Co. Some of the books in that library seem to me to have no use, except to take up space on the shelves, and some are the best ever issued by any publishing house. Notably is this true of "The Reptile Book" by Ditmars, and "The Frog Book," previously referred to, by Dickerson. Those are gems

in their way, but the books on insects are fairly good for illustrations and some interesting text, but, in my opinion, Professor's Comstock's books on the subject are better, as a complete manual.

But you will find it helpful to get in definite, intimate touch with other workers, and for that purpose the best organization in this country for the general study of nature is the Agassiz Association, Arcadia, Sound Beach, Conn. This includes all nature, and is, as above stated, by far the best, if you do not intend to specialize on any one topic. If your interest is birds and birds alone, and you have no use for trees, butterflies or frogs, then unquestionably the Audubon societies are the best for you. If you can think of nothing but plants, and that, too, in a technical manner, join some of the many botanical societies. If your interests are with the fish, by all odds take some of Dr. Jordan's books, published by

Doubleday, Page & Co. and by Henry Holt & Co. They are technically correct, and have the added touch and delight of being brimful of genuine, enthusiastic love for the living fish.

And last, but not least, do not try to do everything. You have come home from previous seasons' outings with the dissatisfied feeling that you did not get anywhere; and the whole trouble was that you did not try to go anywhere. You have heard the story of the man that aimed in a general way at a tree burdened with pigeons, and killed not one; and later, when he saw two pigeons sitting on a topmost twig, he aimed carefully and killed both. The killing of the pigeons, presumably for sport, was bad, but the moral is good. Plan definitely and do efficiently. It requires system, and care, and hard work to accomplish even a pleasure, as it requires system, and care, and work to accomplish anything.

SOUND BEACH, CONN.

The Chess-Player

BY GEORGE HERBERT CLARKE

I PLAYED at chess with Lasker, but to lose,
 Beaten from the beginning; yet the game
 Wavered awhile in seeming, and no shame
 Possessed me. It was mine to check and choose,
 To marshal, menace, try this sudden ruse
 And that side-ambuscade, with hope aflame
 Hailèd to be as he that overcame,
 The laurel *once* at least not to refuse.

Vainly! He sat before me patient, still,
 His dark eye searching out each secret plot,
 And by his brooding, stern-compelling will
 The game was guided, tho I knew it not;—
 Yet find I strength in failure as in strife:
 As I played Lasker, so I challenge Life!

UNIVERSITY OF TENNESSEE, KNOXVILLE.

The Song of the Timber Trail

BY RICHARD M. HUNT

I RUN me line thru the spruce an' pine
As straight as a rifle bore ;
An' the chain-men be to the rear o' me,
An' the swamper walks before.

Me compass aims to the point I names,
An' me swamper hews the way,
With the mighty whacks of his Yankee ax
That ring in the silent day.

We never swerve an' we never curve
For mountain tide or crag :
We climb the hills and we wade the rills,
As sure as a chargin' stag.

We work all day in the forest way
On the pa'ms of our buckhide feet,
An' we only plants the seat of our pants
Come time for the midday eat.

When the treetops blaze in the sun's last rays,
An' the forest air grows damp,
We square our backs to our canvas packs
An' hit the trail to camp.

An' the cook he bakes some Johnny cakes,
An' with ox from the sizzlin' pan,
An' a can o' goo an' some coffee too,
We feeds the feed of a man.

Then we lay our heads on our balsam beds,
As the glowin' fire gets pale,
An' we slumbers still in our blankets till
It's ho! for the timber trail.

WINCHESTER, MASS.

The Progress of Aviation

by Henry Woodhouse

IN an article on the progress of aviation printed in *THE INDEPENDENT* a year ago, in reviewing the progress of the preceding year, the writer enumerated the feats of Henry Farman, Grahame-White, Hoxsey, Tabuteau, Leblanc, and other intrepid airmen whose achievements during the preceding year had outdistanced all expectations and had forced even the most optimistic prophets to extend the range of their vision so as to include unlimited possibilities.

A wonderful development has since taken place. The aviators have increased in number to about 2,000, and their flights are so numerous—about 200,000 flights were made during the year 1911—and stupendous that the whole aspect of development has changed. The abstract feat of the individual aviator is no longer of value. Scores of flights of up to four hours' duration and of from 5,000 to 8,000 feet altitude, and cross country and passenger carrying flights are made daily, and are no longer considered to have "news" value. Aviation meets are no longer of international or national interest—rather local shows; and inventions and technical developments are numerous.

Taking one phase of development, the evolution of speed, to illustrate: in a little over one month between January 24 and March 1, in the heart of the winter season, the world record was broken five times, by three different makes of aeroplanes, and the last, that of Jules Vedrines, made on March 1, is of 101 $\frac{2}{3}$ miles covered in exactly one hour's time. Very likely few people know of these

records. They were announced in cable despatches and in most cases were reported in a few lines and were tucked away at the end of a column. The average person who read the item undoubtedly did not realize just what it meant and did not give it a second thought. To the insider those few lines brought wonderment, and may have caused him to startle the company at the breakfast table with an exclamation. If there were two, they may have given each other a vigorous handshake by way of celebrating a great event.

Each event meant a great stride forward—greater than one could have thought of expecting. The world record made by Bathiat on January 26, for instance, was a most significant surprise. This record consists of 120 kilometres covered in 49 minutes, 57 seconds, a speed of about 90 miles an hour. It was made with a Sommer monoplane, a machine entirely unknown to all but a few insiders and considered by these as a freakish experiment of the famous maker of large passenger-carrying biplanes.

The two feats of speed of Jules Vedrines on February 22 and March 1 were startling. In the first, a distance of 124 miles was covered in one hour, 15 minutes, or a speed of about 99 miles an hour; in the second, the distance of 101 $\frac{2}{3}$ miles was covered in exactly one hour. And the machine used, the Deperdussin monoplane, was hardly known a year ago!

If we but stop and consider that in August, 1909, and for months thereafter Glenn H. Curtiss was considered a won-

der for having won the Gordon Bennett Cup with a flight of 13 miles at a speed of 47 miles an hour, we realize what advance has been made in the line of speed. The next Gordon Bennett Cup race will see a speed of 110 miles per hour!

The evolution was just as great in other lines of development—especially in the mechanical end. The way in which problems—hard, perplexing problems, which had been pronounced beyond solution—are being solved is really wonderful. The world at large learned a year or so ago that aviation was held back by lack of good motors and means to maintain stability of aeroplanes automatically. That impression still exists, and it is time to modify it. These problems are no longer general. To-day it is considered a poor motor which does not give a continuous run of at least two hours; and automatic stabilizers are available which enable one to pilot an aeroplane at little risk with less knowledge than it takes to drive an automobile.

In the past year there were half dozen aero motors that could be relied on to run about four hours without stopping and to give at least four-fifths of the power rated. The number may now

be increased to one dozen. At the recent aero show in Paris there were seventy different aero motors exhibited! As the demand is great—being expected to amount to 7,000 motors this year—the automobile and marine motor makers are modifying their motors to fit aeroplanes. Already a number of them, like the Renault, the Labor and the Deimler, are giving as good service as the best purely aero motors. This gives an idea of the improvement of motors: a year ago the Anzani motor, which enabled Louis Bleriot to cross the English Channel in July, 1909, could not be run for thirty minutes without trouble; today it is run ten hours in the laboratory. The famous 50 horse power Gnome motor in 1909 gave only 32 horse power; to-day it gives 49 horse power; and there are now four sizes sold: 50 horse power, 70 horse power, 100 horse power, and 130 horse power.

Another wonderful development is the automatic aeroplane stabilizer. This is a device which, by maintaining the stability of the aeroplane automatically, prevents accidents when the human element fails—as in cases of carelessness or temporary sickness of the pilot; and helps the pilot to cope with unexpected

HOW ELLIS ISLAND LOOKS FROM AN AEROPLANE

This photograph of the Immigration Station in New York Harbor was taken from Coffyn's hydroaeroplane

THE MARÇAY-MOONEN MONOPLANE HAS FOLDING WINGS

Here it is shown crossing Paris. It is drawn by an automobile, and before it looms the majestic Arch of Triumph.

wind gusts. A year ago this was a cardinal problem generally considered impossible of solution. Today there are two stabilizers on the market and a half dozen in laboratories being tested which more than solve the problem.

The first of those in the market was developed by the Wright brothers, and is a wonderful invention. This apparatus—a pendulum-controlled, air-driven device—when fitted to an aeroplane practically allows the pilot to go to sleep, doing his work while he sleeps. Once any given height has been chosen and the instrument has been set, the machine, governed by the stabilizer, will continue to travel at the height regardless of jolts and turns. The pilot may let go all controls, and the machine will look after everything but its direction of flight. On turns it self-regulates its degree of banking, apportioning the bank with accuracy to the sharpness of the turn. And so with elevating, the machine can neither stall nor dive. To get up or down the control is quickly disconnected when the hand of the pilot resumes command. It is understood that the Wrights have not been wholly satisfied with the ability of

the device to control fore and aft stability in all conditions, and in their usual cautious fashion have determined to put out only so much of their complete stabilizer as has proved itself wholly successful. When the thing is finally considered complete by the Wright brothers—and that is not very far off*—then the average man will be able to pilot his own aeroplane with a complete feeling of security, with no more training than required to pilot his own motor boat.

The second stabilizer in the market was invented by a French lawyer, A. Doutré. It is operated by air pressure and the inertia of sliding weights, and automatically prevents the dangerous forward plunges of aeroplanes by turning the elevating rudder upward and checking the plunging tendency of the machine when it runs into a cross wind or air swirl. This device has been tried very extensively and is being adopted now by the French army.

Last year aeroplanes were used in the military maneuvers in France, Germany, Russia, Italy, England, Austria, Belgium

*This article was written some weeks before the death of Wilbur Wright on May 30.

and Rumania. The results were thoroly satisfactory. In France, where they were used most extensively—forty machines taking part in the maneuvers—it was proved that the new thing afforded speed and precision, two valuable elements in military tactics, in large quantity. The aeroplanes were assigned to three duties: First, to reconnoiter the positions and movements of the enemy; second, to aid the artillery by advising it of the exact positions of the hostile batteries; third, by keeping different parts of the army in close connection with each other. In all these duties they proved highly efficient and made the aviation corps potential, so much so that they dominated over everything else and made everything else appear slow by contrast. General Bonneau, who was in command of the Seventh Corps, expressed his opinion of the “quatrième arme” as follows:

“It is an infallible thing; let us suppose that we are playing cards—and the work is, too true, a very bloody game; let us suppose that we are playing cards and that we can at every minute read our opponent’s cards. There are no scouts in cavalry, no spies that give better information than the aeroplane about the position and the disposition of the enemy and their available forces—the position of their

batteries, etc. With the aeroplane everything is seen by the eye; nothing is left to guess.”

Of the aeroplane as director of guns, he said:

“We have an artillery which is in strength the best in the world, but to make artillery accomplish its work of destruction we must see the object target. As a rule, either the nature of the ground, the mist over the ground, bushes, or trees prevent one from seeing where the enemy is at a distance. The aeroplane sees all this and knows all this. It is, therefore, the eye of the battery at 2,000 feet in the air; it is the pointer pointing, not downward but upward. The artillerymen who are lucky enough to have aviators like Lieutenants Bellenger and Cheverau at their disposition will obtain all information about the physical condition of the ground and be directed to make their firing effective. They will hit nine times out of ten.”

On the possibilities of using aeroplanes as instruments of attack as well as for destroying bridges and bases of supply, he said:

“All the scouts reported that everything was visible and accessible to the man in the aeroplane. There were no companies that were not distinguishable from on high; there were no bridges, no railroads, no aqueducts, no camps that could not be seen instantly; there were likewise no groups of generals and officers that were not in danger for their lives whenever an aeroplane passed over them.

HIDING FROM THE AIR-SCOUT

In the French military maneuvers the monoplane is an instrument used more and more. The man in the Blériot machine is Captain Ballinger.

A few small one-pound bombs dropped by the scouts at certain times would have robbed France of many of her best officers."

What France says or does in this line may be considered standard—the opinion of General Bonneau may be considered as the opinion of the majority of leading military authorities. At all events, France made a plan to spend \$4,300,000 to organize military aviation, and all the nations have followed suit.

Even Emperor William, who a year ago said the aeroplane was not comparable to the big Zeppelin airships, fell to the lure of the aeroplane when he saw the buzzing thing fly under, over and around the big dirigibles, and offered 50,000 marks, out of his private purse, to encourage the development of aero motors.

It is a paradox that the direct result of this activity in the military field has been the development of friendship between European nations. When Blériot crossed the English Channel on July 25, 1909, the reports, the world over, were that the new thing would destroy international peace. Much different was the attitude last year, when eight aeroplanes during the European Circuit crossed France, Belgium, Holland and the English Channel; and others crossed practically every country in Europe. Everywhere the airmen were welcomed and feted; everywhere the aeroplane disregarded walls, frontiers and political fences and prejudices, and prompted friendship between nations, broadening, if anything, the prospects of world peace.

The great value of the general adoption of the aeroplane for military ser-

vice lies in that it makes the governments pay for the development of the new science; it made the French Government pay \$2,000,000 to develop the machine which last year crossed countries and continents on the most peaceful errands; it will this year make the governments of ten nations pay \$10,000,000 to make the aeroplane a safe and utile vehicle. This brings the gratifying certainty that that money is spent for common good, as in developing a perfect aeroplane for use in possible wars the governments are developing a perfect aeroplane for everyday use in time of peace—in commerce and sport and pleasure.

A great problem solver, minimizing danger, bringing the flying machine within the reach of the sportsman, and right in the heart of cities is the hydroaeroplane. This is essentially an aeroplane fitted with hydro surfaces which hold the machine afloat on the water. The floats do not impede the progress of the aeroplane but extend its safety and scope.

Glenn H. Curtiss, who developed the first practical hydroaeroplane, and his aviators have made hundreds of flights; likewise W. Starling Burgess, Harry N. Atwood, Walter Brookins, Frank T. Coffyn and the three naval aviators—Lieutenants G. T. Ellyson, John Rodgers and J. H. Towlers; but nothing worse than duckings has resulted. That brings aviation within reach of the average man; most people will risk a ducking for the thrilling sensation of flight.

NEW YORK CITY.

Literature

The Enchantment of Mountains

IT has been said that the ancients showed no appreciation of the beauty and natural charm of the mountains, but it is certain that they bore witness to the mountain spell by raising their altars on the highest hills and peopling the snow-capped summits with their greatest divinities. The modern world, however, yields itself with full consciousness to the enchantment of the wooded slopes, the wind-swept crags, and the moving, broken, treacherous fields of snow and ice that often separate the loftiest peaks from the smiling gardens that blossom at their feet. The quickening pulse-beat, the high satisfaction of difficulties overcome, and the wondrous vistas of snow-field and cloudland with their ever-changing effects combine to give the successful climber to some unusual altitude those feelings of exhilaration and keen enjoyment which minimize his arduous efforts and possible dangers and win his devotion to the mystery and majesty of the mountains. It is some such fascination that has led Mr. Samuel Turner, of England, to spend every available moment of his vacations for several years in *Climbing Adventures in Four Continents*.¹ When business engagements or outing trips have taken him to the vicinity of noted ranges he has been eager to seize the opportunity of putting his courage, strength and ingenuity to the test in trying to break some previous record or scale some hitherto inaccessible peak. Beginning his climbing on Mt. Blanc, he has followed his more difficult achievements in the Alps by dangerous ascents in Siberia, New Zealand and South America, in each of which places he has reached heights and pierced into regions unvisited by man before. His adventures have been filled with thrilling episodes which in no wise intimidate his spirit, and he still holds himself in

training to meet the challenge of Nature to unveil the mysteries she has so far concealed by snow and ice and a rarified atmosphere.

Another Englishman, a lieutenant in the Indian army, writes an interesting tale of his year's trek *Across the Roof of the World*,² on thru the little known regions and peoples of Central Asia and northward to the Siberian railroad. His long journey was undertaken because of his own love of sport and adventurous travel. The Himalayas, the Pamirs, Thian Shan and the Great Altai mountains furnished Lieutenant Etherton vast opportunities for hazardous enterprise and the taking of unfamiliar game. He describes many engaging incidents of travel, hunting and contact with the native peoples.

America also has its venturesome spirits devoted to mountain exploration, and these are not all confined to the male sex. Miss Annie S. Peck tells how the first sight of the majestic, awe-inspiring Matterhorn transformed her allegiance from the sea to the mountains and made her feel that she could never be happy until she scaled its frowning walls. Soon she sighed for other heights to conquer, and after ascending the Mexican Orizaba, she turned her attention to South America. She now recounts the struggles, disappointments and successes in her ten years' *Search for the Apex of America*³ at the top of Mt. Illampu (Sorata) in Bolivia and later at Huascarán, the summit of which she finally reached in 1908, so that she now glories in having attained a higher altitude (over 22,000 feet) than any other American climber. No one can read her volume without admiring her perse-

²ACROSS THE ROOF OF THE WORLD. A Record of Sport and Travel through Kashmir, Gilgit, Hunza, the Pamirs, Chinese Turkistan, Mongolia and Siberia. By Lieut. P. T. Etherton, F.R.G.S., F.Z.S. With Map and Illustrations. New York: Frederick A. Stokes Company. \$4.80.

³A SEARCH FOR THE APEX OF AMERICA. High Mountain Climbing in Peru and Bolivia, Including the Conquest of Huascarán. By Annie S. Peck, M.A. With Numerous Illustrations. New York: Dodd, Mead & Co. \$3.50.

verance and rejoicing over her well-deserved success.

But our own country is rich in mountains as well as in mountain climbers, and one has only to follow Mr. Mills' vivid descriptions of his race with an avalanche or his thrilling experiences in a mountain blizzard to realize how fascinating is *The Spell of the Rockies*,⁴ tho the glaciers may be absent and no high peak still mocks the explorer's efforts. In every season, in storm and sunshine the ever-changing aspect yields its potent charm. Alas! that the spell should be broken while Mr. Mills laments the devastating forest fires and consequent erosions which destroy the mountain life and beauty and ruin the lower valleys with alternate floods and droughts! Alas! also that Mr. Dillon Wallace should have no less sad a tale to tell of Jackson's Hole, Wyoming, where the elk have made their last stand and die each winter by the thousand, from starvation.⁵

⁴THE SPELL OF THE ROCKIES. By Enos A. Mills. With Illustrations from Photographs by the Author. Boston and New York: Houghton Mifflin Company. \$1.75.

⁵SADDLE AND CAMP IN THE ROCKIES. By Dillon Wallace. New York: Outing Publishing Co. \$1.75.

To drink in the full glory of the mountains, however, and to enter intimately into their deeper meaning and mysteries, one has need of more than the climbing instinct and the explorer's enthusiasm. Only the true nature lover with a poetic soul can hear and absorb the real message of the mountain wraiths, and only he who is blessed with imaginative genius can give it worthy expression. Because Mr. John Muir is possessed of these qualities it is a continual joy to follow him during his *First Summer in the Sierra*⁶ into what he calls the "storm-beaten sky gardens amid so vast a congregation of onlooking mountains." This daily record of studies and impressions in '69 calls up many an exquisite vision of singing streams and swaying pines, meadow sprinkled with gorgeous flowers and majestic, snow-laden piles towering skyward. The day on which he reached the summit of Mt. Hoffman, eleven thousand feet high, he describes as "a glory day of admission into a new

realm of wonder as if Nature had wooingly whispered, 'Come up higher.' " A month before that time he had written those exulting words which one must regard as characteristic of his life: "Nevermore, however weary, should one faint by the way who gains the blessing of one mountain day; whatever his fate, long life, short life, stormy or calm, he is rich forever."

What Shall We Read on the Vacation ?

WHEREVER, however, whenever vacation is to be spent, on land or sea, in work or idleness, we must have books. What shall they be? *Neighborhood*,¹ certainly. In this lovely portrayal of Windlecombe, a little village of the Sussex Downs antedating the Domesday Book, is not only nature in many phases, but human nature, and both at work. These annals are of actual daily country life, with all its homely happenings. Nothing is idealized, all is depicted; the book is

made up of facts, not descriptions; verbs, not adjectives.

It is quite otherwise with a volume of our own country byways that points a significant national contrast.² We have no roots deep in the soil, as England has. Our ancient farms (how our cousins jeer at the adjective!) are proverbially deserted farms. Our agricultural interest is a back-to-the-land movement, not an of-the-land condition. Nevertheless, these sketches of industrious idleness are charmingly descriptive of such rural inactivities as unprogressive farming, refraining from gardening, busy staying away from church on Sunday, with plenty of roaming and loafing, and all too much fishing and hunting.

The "untrodden ways" invite the romancer, as well as the essayist, and justly so. *High Bradford*,³ a lively story of old Cape Cod, challenges comparison here with a quaint picture of a Cornish fishing village on a fête day.⁴

¹THE JONATHAN PAPERS. By Elizabeth Woodbridge. Boston: Houghton, Mifflin & Co. \$1.25.

²HIGH BRADFORD. By Mary Rogers Bangs. Boston: Houghton, Mifflin & Co. \$1.20.

³DORINDA'S BIRTHDAY: A CORNISH IDYLL. By Charles Lee. New York: E. P. Dutton & Co. \$1.25.

¹NEIGHBORHOOD: A Year's Life in and About an English Village. By Tickner Edwardes. New York: E. P. Dutton & Co. \$2

The latter involves Dorinda's first coiffure, and, incidentally, her first love affair, the more important issue a matter of thirty-five hairpins, each a dangerous

first a word concerning two volumes by way of warning. *In Search of Arcady*,⁵ with plenty of plot, more than enough people of sorts, ample motif, abundant

FROM BOWER'S "LONESOME LAND" (LITTLE, BROWN)

snare subject to the coquetry of the "husband-high maid." The New England story, smells of the sea, and thrills with adventure rooted in the sober Puritan homes.

Of these bypaths and quiet themes the vacation reader is often wary. He is wont to raise the slogan, "the plot's the thing." His hint shall be regarded, but

and varied setting, disintegrates for want of unifying force. Arcadia is conspicuous for its absence, the Romany spell does not bind, the mystery is ineffectual. *Country Neighbors*,⁶ of a more difficult, tho less interesting fabric, the

⁵IN SEARCH OF ARCADY. By Nina Wilcox Putnam. New York: Doubleday, Page & Co. \$1.20.

⁶COUNTRY NEIGHBORS: A Long Island Pastoral. By Susan Tabor. New York: Duffield & Co. \$1.20.

daily life of a Long Island community, is somewhat better knit up. It suffers from a multiplicity of characters and a too great leveling of interests.

But the plot-lover finds the vast, adventurous West and the mysterious fastnesses of the North treasure trove of romance. Charles D. Stewart, of "Fugitive Blacksmith" fame, contributes in *The Wrong Woman*⁷ a clean romance of the Texas sheep plains, and adds a companion piece to his famous picture of runaway oxen. This time it is a newborn lamb, scorned from its initial moment of its mother. Weak but game, its efforts to establish itself on its ill-designed legs; its pained surprise, when at last successful, at finding only empty air where it might reasonably have expected its mother; and its efficient succor by the gentleman herdsman—such is the prelude to the hero's equally efficient aid to the "wrong woman," and her inevitable development into the right woman.

Less pastoral than this sketch is a good sensational story of Montana ranch life. If it seems improbable that a piously reared girl of narrow type should journey alone to *Lonesome Land*⁸ to marry a lover not seen for three years, the evolution of character thus set in progress atones for the lack of realism; and two *ex machina* personages of the story are worth meeting at any cost. Arline's apostrophe to a traveling Presidential candidate is especially heartening.

Two stories of the Hudson's Bay Company eloquently point the moral of the novelist. In *Flower of the North*,⁹ after some initial uncertainty and self-consciousness, the current of events is set running, and the reader is swept along, breathless, to the very last page. But, as absorbing as plot and mystery are here, the book never rises above the level of a good story; whereas *The Maid of the Whispering Hills*,¹⁰ with its exquisite deliberation and poetic feeling, is a stirring and beautiful epic

of the North. Maren Le Moyne, venturer of the venturers, flame of fire among her little band of French Canadians, urger, inspirer and moral leader, a living pillar before them in her eagerness, was called to her quest as relentlessly as Joan. A born leader of men, bearing their fate in her heart, dominating their destinies, she pursues, like a young goddess, her own. It is only the destiny of a woman, after all, beset with the casualties incident thereto, but the soul of the maid is in it; the breathless beauty of the Canadian forest is in it; the tragic poetry of the Indian, the lure of the wild, the power of love and passion at their purest, the magnificent triumph of the human heart, are in it. It is the dream—and the fulfilment.

Can it be that divergent lines of one period touch this enchantment on the one side and, on the other, such "blood marks of reality" as tinge the story of current Scottish farm life by James Bryce?¹¹ From an abused and tortured plowboy, Jamie Bryce rises to the highest confidence and regard of his landholder only to renounce his achievement at its height and cast in his lot again with the common worker. The result looks like failure to the plowboy's friends, but is crowned by a sense of spiritual triumph, which he analyzes to his satisfaction. The book is a notable human document, and a thesis for socialism, radicalism, humanitarianism. Edwin Markham, in a sympathetic preface, takes issue with the author's "way of deliverance," which is not, he says, "in a return to an Adamic Paradise, but in laying the foundations on earth for that holy city of fraternity revealed in the apocalyptic vision of St. John."

Actualities and matters of state, tho of a less radical sort, also form the groundwork of Meredith Nicholson's latest and best work.¹² On this warp of political fabric he weaves a romance conceived in the spirit of the times. A clear-eyed, gymnasium-tempered young Hypatia, with a mystery surrounding her birth, goes forth to conquer—and does conquer: conquers a lover, a father,

⁷THE WRONG WOMAN. By Charles D. Stewart. Boston: Houghton, Mifflin & Co. \$1.25.

⁸LONESOME LAND. By B. M. Boyer. Boston: Little, Brown & Co. \$1.25.

a political boss, a socialist, a silly girl, a stenographer, a schoolboy, a mother, an old woman and others, to say nothing of her own destiny. The author has been at great pains to present a circumstantial effect of historical correctness and current politics with their underlying forces, and the reader derives therefrom a stimulating sense of mingling with epoch-making events instead of wasting his time over a mere love story.

The vacation budget is full. There are books we might add and others that we might subtract, but many men of many minds need many books of many kinds. The meditative pictures of country life are, of course, for the city man; the thrillers for the middle-aged; the serious novel and the propaganda for the young; the romance for every one.

Travelers' Tales

TRAVELERS betake themselves hither and yon; but why do so few of them seek out the South of France? The heat of it during the summer months? Yet Italy is visited. Southern France—we speak not of fashionable winter resorts and the refuges of the tuberculous—Southern France is a treasure house of history, tradition, architecture and beautiful women. Not the Roman alone, but, before him, Greek, Carthaginian and Moor made its cities their halting places. The traveler of today sees their handiwork for himself, and reads their blood in the citizens and citizenesses. Arles and Nîmes and Orange, each with Roman arenas, wherein bullfights and classical dramas are performed for the visitor's edification; ancient Massilia that is almost forgotten in bustling Marseilles; Aveyron (where the savage came from); Beaucaire and Tarascon (the Daudet country); all the valley of the Rhone, with its reminiscences of Petrarch and Laura and its more recent associations of Mistral and Aicard—here are only a few of the matters which Caroline Atwater Mason treats in her sprightly way in her book of *The Spell of France*.¹ To be sure, she tells us of many other places than those named, and even gives a chapter to Rouissillon, and another to the

High Pyrenees. But for Mrs. Mason, as for us, a great part of the spell of France is that of the *old* France; and here is a book where Paris is named but twice.

Mr. Thomas Okey, in contributing a volume on Avignon to the Medieval Towns Series,² is a much less sprightly writer than Mrs. Mason, but he takes his task more seriously, and his work has a permanent reference value, even if it makes less diverting reading for the summer season. In the story of Avignon is summed up a great part of the history of France, Italy and the Roman Catholic Church. Avignon deserves, indeed, a chapter in the entertaining volume which she who signs herself "The Princess" has made of letters composed without much method and contributed, in the first place, to the *Springfield Republican*—letters on picturesque cities as widely scattered as Burgos and Bruges, London and Lourdes, Quebec and Oberammergau.³

But to return to Southern France. This it is easy to do—for the fourth book on our reading table is a volume of tales of that part of the world, by Thomas A. Janvier, a graceful writer and one so much at home in the country he is telling of that he is himself a *Félibre*. There is a delicious blending of humor and sympathy in this American's stories of Daudet's home province, leisurely stories for those of us who are in no more haste than the Philadelphian who tells them.

In Palestine

So much is written about Palestine to supply biblical explanations and illustrations or from the archeological point of view that one almost assumes that some such material is sure to be found in any volume bearing the name of that country, no matter how diverting its title may be. It is therefore a delight to come upon this informal, attractive narrative about the Holy Land which makes no pretense of exploiting sacred sites or drawing parallels between present and past customs.⁴

¹THE SPELL OF FRANCE. By Caroline Atwater Mason. Illustrated. Pages 425. Boston: L. C. Page & Co \$2.50.

²THE STORY OF AVIGNON. By Thomas Okey. Illustrated by Percy Wadham. New York: E. P. Dutton & Co. \$1.75.

³TRAVELLER'S TALES. Told in Letters from Belgium, Germany, England, Scotland, France, and Spain. By "The Princess." With Twenty-one Illustrations. New York: G. P. Putnam's Sons. \$2

⁴FROM THE SOUTH OF FRANCE. By Thomas A. Janvier. Illustrated. New York: Harper & Bros. \$1.20.

Mr. Copping simply records in a skilful, realistic and easy manner the experiences and impressions of a well-equipped traveler in one of the most interesting sections of the world. The author's observations are singularly instructive, for the trained eye of the journalist was usually fastened upon the significant features of the scenes he witnessed. The descriptions of the Mohammedan procession, the schools of Nazareth and the Russian pilgrims furnish conspicuous examples of his ability to reach the deeper things of life thru their superficial phenomena. The readers of the volume will be grateful not only for the vividly written narrative, but also for the many illustrations in color and pencil sketches supplied by the author's brother and traveling companion, Mr. Harold Copping, whose work deserves commendation.

The author of a second book on the Holy Lands² is an English lecturer on Palestine. He does not claim to be an expert in topography or history, and he attempts nothing more than to supply a running text for his pictures. They are well printed and, of course, mechanically faithful, and will give a clearer idea of what Palestine is today. The conditions are changing very rapidly for the better, so far as civilization is concerned, but the old Biblical customs are fast passing away; the author has preserved in picture what he can. The American *hajji* who has made the pilgrimage, and many who would make it, will be interested in this volume and also instructed if they will make some allowances, as where the author listens to an American traveler "joshing" his dragoman and takes it for

serious ignorance. He must also expect to find dragomans spoken of as "dragomen," and President Bliss, of the Syrian Protestant College in Beirut, confounded with his brother, and in the preface the name of Conder becomes "Condor," and that of Selah Merrill is doubly disguised as Serah Merrill.

Harper's Guide to Wild Flowers. By Mrs. Caroline A. Creevey. 12mo, pp. 555. New York: Harper & Brothers. \$1.60.

We have here Mrs. Creevey's second essay in the field of popular botany. This *Guide* follows one or more earlier favorite volumes by classifying plants by the color of their flowers. That is the easiest of all ways, except by pictures, but it requires much labor to run thru the list of white flowers or blue. It is the lazy woman's way, who will not take the way of science. Still, it is better than nothing. It will be a useful book for the summer vaca-

A GLIMPSE OF MODERN CAIRO
From "A Journalist in the Holy Land" (Revell)

tion by the seaside or the mountains. The real botanist will depend on Gray's Manual or on that of Britton and Brown. Or, if he be a devotee of the subject he will load his trunk with the three volumes of the latter's big work, which gives a picture for every plant. We are grateful in this volume for a multitude of wood cuts and a few colored plates. Of especial value are the lists of plants by their habitats, to check those by color. For every plant an English name has been found or created, to the questionable enrichment of the language, for a multitude of them can never be naturalized. The technical Latin is much better. We advise our readers to use one of the manuals if they are willing to do a bit of studying; if not, let them by all means enjoy the season with such a useful book as Mrs. Creevey's.

¹A JOURNALIST IN THE HOLY LAND: GLIMPSES OF EGYPT AND PALESTINE. By Arthur E. Copping. Illustrated by Harold Copping. New York: Fleming H. Revell Company. \$2.

²PALESTINE DEPICTED AND DESCRIBED. By G. E. Franklin, F.R.G.S. Illustrated with 376 photographs by the Author. New York: E. P. Dutton & Co. \$3.

Three Wonderlands of the American West.

By Thomas D. Murphy. With sixteen reproductions in color from original paintings by Thomas Moran, N. A., and thirty-two duogravures from photographs; also maps. Pp. 180. Boston: L. C. Page & Co. \$3.

The three wonderlands described in these "notes of a traveler" are the Yellowstone and Yosemite national parks and the Grand Cañon of the Colorado. The style of the work is not impressive, but Mr. Murphy is an enthusiastic, painstaking and good-tempered traveler, and his book is, after all, one of those in which author plays second fiddle to illustrator. Mr. Moran's paintings are excellent in themselves, and the color plates which reproduce them here are unusually correct: not more brightly colored than the canvases they imitate, or the natural scenery which was Mr. Moran's inspiration.

The Judgments of the Sea. By Ralph D. Paine. New York: Sturgis & Walton. \$1.20.

This collection of sea stories appeared individually in *Scribner's*, the *Century*, *McClure's* and other magazines. We once spoke of our intention to publish some day a book called "The Twelve Best Stories Ever Written." When the time comes we shall try to include one from this collection. Ralph D. Paine holds a position of his own as a short story writer. Not only do his writings convey those intimate details that place a definite picture of characters and surroundings before the reader, but

he is master in pathos and humor, without overdoing either. His yarns carry us from transatlantic liners to military events of the Far East. The best story of the book is "The Last Pilot Schooner." This tells the story of a "cub" reporter called Wilson, who by mistake gets the assignment intended for a superior by the same name to make a cruise with a pilot schooner. The schooner is wrecked, and Wilson, with an aged pilot, alone escapes. His flowery narrative, prepared on the trip home, is condemned by the pilot, who assists Wilson to write a plain, ungarnished tale of the sea. To find how their joint efforts succeed one should read the book.

Wide Courses. By James B. Connolly. New York: Charles Scribner's Sons. \$1.25.

The latest collection of tales is fully equal in merit to Mr. Connolly's previous books, which in itself is a statement of praise. The author has the happy faculty of creating romance where one would suppose none to be possible. We have had many thrilling stories of full-rigged ships, of whalers and of fishing schooners, but Mr. Connolly comes down to modern times and portrays life on tugs and barges. John Kieran, pumpman on a tank steamer, has as much individuality as any deep-sea sailor. In the last story of the book Kieran, the pumpman, turns out to be a college athlete of days gone by, who, after serving on a

From Murphy's "Three Wonderlands of the American West" (Page)
Courtesy Pillsbury Picture Company

battleship, and meeting with varied adventures in South America, prefers the open air life of the sea to proffered office positions. The author, in removing Kieran's disguise, still refers to himself as the "passenger," only hinting at an athletic record of his own. Those who know Mr. Connolly will remember that he won cups and olive wreaths at the first Olympic games at Athens in 1896, besides making himself popular with all nationalities by his genial nature.

The Canadian Rockies.
New and Old Trails.
By Arthur P. Coleman,
Ph.D., F.R.S.
Imported by Charles
Scribner's Sons. \$3.50.

During recent years the Canadian Rockies have become a favorite field for camper and hunter alike, but few can write of the times, over twenty-five years ago, when Calgary had a population of only one thousand and most of the dwellings consisted of abandoned Canadian Pacific Railway box cars. Professor Coleman first went to Calgary in May, 1884, and the first section of his book describes his travels in that frontier community. Other sections deal with the Selkirk trails, the Columbia River, Athabasca Pass, and his last expedition in 1908 to Mount Robson, the highest point in the Canadian Rockies. His party was the first to ascend this mountain, which has been compared to the Matterhorn in the difficulties its ascension presents. Mr. Coleman is professor of geology in the University of Toronto, and touches in a popular way on the geological problems of the Rockies. The narrative of his camping trips is full of interest and the intimate details that make books of this character worth reading. The text is illustrated with forty-one good illustration and three maps, and the book has every attraction of good printing.

A Son of the Sun. By Jack London. Garden City, N. Y.: Doubleday, Page & Co. \$1.20.

Almayer's Folly. By Joseph Conrad. New York: The Macmillan Co. \$1.25.

If a critic of painting were set to the task of reviewing Jack London's fiction he might be excused for praising his color contrasts and condemning him for his exaggerated love of inky blacks and

lurid reds; a taste more savage than refined. The romancer's own experiences in the South Seas have given him the wherewithal, however, to make of *A Son of the Sun* a cycle of eight short stories, whose central figure is one David Grief, who was once an English man. A financial success, this somewhat tigerish hero is spared the disease with which the tropics punish a man for his sins. He leaves it to other Europeans to devote themselves exclusively to chicanery, murder, the eternal consumption of strong drink, and the dread of next

AN ILLUSTRATION FROM "A SON OF THE SUN" BY JACK LONDON

day's chills and fever. All of these matters have made a great impression on Jack London, however, and those who have so far been unimpressed by his genius will probably yawn over this installment of sudden death and startling language. The more sober and restrained style of Joseph Conrad, a new edition of whose *Almayer's Folly* has just reached us, will please such readers better. Mr. Conrad's voice is less strident, but his art is, for those who are in no great haste where reading is concerned, far more convincing. He knows even more of the South Seas and of Eastern waters than does Mr. London himself. And those who have read his "Personal Recollections," being well aware that Almayer is no imaginary German, will welcome this chance to discover in just what his folly consisted.

Literary Notes

....A sketchy and helpful account of his trip to the Far East is a volume entitled *Where Half the World Is Waking Up*, by Clarence Poe. The author's observations on agricultural conditions are valuable. (Double-day; \$1.25.)

....Before starting on a fishing trip it might be well to read *Practical Dry-Fly Fishing* by Emlyn M. Gill (Scribner; \$1.25). The latest scientific methods of landing the fish are explained. Even diagrams of pools are included, lettered to show the most approved modus operandi.

....*Captain Martha Mary*, by Avery Abbott (Century; \$1), is reminiscent, both in style and in format, of "Mrs. Wiggs of the Cabbage Patch"; it is likewise infused with the same cheerful philosophy and homely humanity. The heroine is a small girl of the tenements, who struggles, at first against odds, and then with success, to care for her ample family of brothers and sisters.

....Sprightliness, a sense of comedy, and a touch of pathos mark Katharine Tynan's *Paradise Farm* (Duffield; \$1.20). The romance of Mrs. Cripps, tenant of the farm, is charmingly brought about by the vivacious lodgers who come to her at a time when she is under a dark cloud. Readers looking for a casual tale with a sweet spirit—and well told, withal—will not be disappointed.

....Death has always held a dramatic place in fiction, but it has remained for Mr. H. Rider Haggard to personalize it in his latest novel, *Red Eve* (Doubleday; \$1.20). The love adventures of Red Eve are but a mask for the vivid drama enacted by the graphic figure of Death. Many authors can tell a good story but few could combine the good story and the good allegory we have in this book.

....Any playwright who is seeking a novel as the basis for a melodrama will find excellent material in *Over the Pass*, by Frederick Palmer (Scribner; \$1.35). The plot is laid in Arizona, and pistol play is part of the daily routine. The scene in which the hero covers the villain with his revolver, while the heroine preserves the hero's life by pressing her thumb on his severed artery, should be made the climax of the melodrama.

....In *A Country Parish* (Pilgrim Press; \$1.25) Rev. Frank S. Child gives some delightful glimpses into the religious and social life of an old Connecticut community. Themes of lively interest are found in the personnel of

the ministers, the parish changes and rivalries, the religious customs, and the beauties of natural environment, all of which have conspired to make noteworthy the history of Fairfield since its founding in 1639.

....The automobile is an ever-increasing adjunct in present-day fiction. Authors take transcontinental trips just in order to combine romance with travel. Such was the motive prompting Thomas W. and Agnes A. Wilby, who toured from the East to the West of the United States, and back again, before writing their novel, *On the Trail to Sunset* (Moffat; \$1.35). The illustrations are from photographs actually taken *en route*. Amid descriptions of the Southwest, there is a combination of love and mystery.

....Julian Street writes in *Ship-Bored* a sophisticatedly humorous account of an ocean crossing on a modern liner. All the indispensable features of such an adventure, from the blonde divinity who turns unbecomingly yellow and the exclusive Mr. and Mrs. Newport-Philadelphia who have "absolutely nothing in common" with any of the other passengers—except seasickness, down to the belle of the promenade and the actresses who are as inevitable as the rudder itself, are sketched cynically yet more or less to the life. There are eleven illustrations by Mrs. Preston (Lane; 50 cents).

....*A Yosemite Flora*, by Harvey Monroe Hall and Carlotta Case Hall, is a very convenient little handbook of the ferns and flowering plants and trees of the great Yosemite Park. The park contains over a thousand square miles with most varied conditions, from hot plains to the edge of glaciers, and the flora is large. About a thousand species are here described, at more length than in a usual "Flora." This book, illustrated with plates and drawings and provided with an analytical key, will be very useful to visitors with a botanical taste. (Paul Elder Co., San Francisco; \$2.)

....After the highly tense strains of the younger poets, one may find rest for the ear in the *Old Quaker Meeting-Houses* of John Russell Hayes. The very sight on the printed page of this book (The Biddle Press, Philadelphia; \$1) of the 166 old-fashioned, never-changing buildings in which the Society of Friends find themselves nearer to the divine harmonies, gives rest to the eyes. Chary of the music of Saint Cecilia, one can easily imagine a more perfect music sifting down to the worshiper from the wireless realms of the upper currents of song. The homely verses of Mr. Hayes are a running comment on these innumerable houses of still worship.

....In a part of our edition of May 30 the name of the author of the American Historical Association prize essay, *The Negro in Pennsylvania*, appeared as Edward Raymond "Farner." We hope that our readers recognized this as a misprint for the name of Dr. Turner, Professor of History in the University of Michigan.

....To those interested in the constructive power of the hypnotic influence, *Bracken*, by John Trevena (Kennerley; \$1.35), will prove an exhaustive hypothetical study of a weak personality brought at one time under the dominance of a mind governed by passion, at another under one governed by intellect. The book is burdened with a mass of allegorical mysticism.

....The pictures alone in A. M. Hyamson's *Elizabethan Adventures upon the Spanish Main* (Dutton; \$1.50) would entice the adventure-loving boy. Adapted from the "Voyages" of Hakluyt, the chapters contain all the meat of the original versions, all the original flavor, without the handicap of archaic spelling and involved passages. This volume is one of a series entitled "British Voyages."

....In *Modern English Books of Power* (San Francisco: Paul Elder & Co.) George Hamlin Fitch discusses such men as Macaulay, Scott, Carlyle, De Quincey, Lamb, the Victorian novelists and poets, Stevenson, Hardy and Kipling. A bibliography and an index are provided, besides numerous illustrations. Mr. Fitch is the pleasant and unaffected exponent of the "Comfort Found in Old Books."

....To many readers it will be refreshing to learn that there was any *Wit and Humor of Colonial Days*. Professor Carl Holliday has issued a volume bearing that title (Lippincott; \$1.50) and has painstakingly extracted much good wheat from a mass of dead material. It's a far cry from Ebenezer Cook, Gent. (who was no real gentleman in expression) to Mark Twain, whose name is on the dedication page.

....After reading Henrik Sienkiewicz' latest novel, the reviewer had a curious impression that the volume was illustrated, so vivid were the mental pictures of the African desert left in the mind, and the book had to be glanced thru to give assurance that the only illustrations were the word-paintings of the author. In *Desert and Wilderness* is a story of the Mahdist insurrection, and the capture of an English girl and a Polish boy by the Arabs. It has all of the rush and swing of the tales which have fascinated us for a generation from "With Fire and Sword"

to "Quo Vadis." The fourteen-year-old boy is a gallant hero; and the older members of the family will be stealing the book from the children and reading it first, if they once dip into its pages, and begin the exciting journey from Port Said to Mombassa. (Little, Brown & Co.; \$1.25.)

....There is much wit and sparkle to Fannie H. Lea's *Jaconetta Stories* (Sturgis; \$1) which is so full of dialogue that it may be read in no time. The author might be able to write a comedy, though the sparring of her heroine and the cynicism of her hero are not to be compared with what is contained in Hope's "The Dolly Dialogue." A light book for an idle hour.

....*Beyond War: A Chapter in the Natural History of Man*, by Vernon L. Kellogg, is a brief and suggestive appeal to history, ethnology and biology, by the author of "Darwinism Today," "The Animals and Man," "Evolution in Animal Life," to prove that human nature does change and that "man has a uniform notion in a straight line toward an evolutionary goal of which war is an absolutely impossible part."

....Readers who do not object to dialect will find interesting observations on life in *Hiram Blair*, by Drew Tufts (McClurg; \$1.35). The central figure is sheriff of Douglas County, Indiana, and is a politician as well as a humorist. A love story furnishes a connection to the sheriff's dictums, of which the following is an example: "Ef St. Paul wuz to come back on airth an' offer me a hoss, saying it wuz a six-year-old, the fust thing I'd do would be to look at its teeth."

....Mrs. Kate Douglas Wiggin was one of the speakers at a dinner in New York which was a feature of the Dickens centenary. This speech of hers has now been given a charming narrative form. *A Child's Journey with Dickens* (Houghton; 50 cents) should inspire every young reader; it recounts most graphically little Kate's naïve chat with the great novelist on a railway train. Such hero worship is refreshing to read about.

....A work of ability and solid worth is to be found in *The Education of Catholic Girls* (Longmans; \$1.25) by Janet Erskine Stuart. Both the ideals to be attained and the materials and methods of instruction are discussed with clarity, appreciation and good judgment. Altho formally concerned with the work in Catholic institutions, the substance of the book applies equally well to non-Catholic education. Not the least attractive feature of the volume is its fine English style.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Wilbur Wright

THE earth was ruled by the first man who walked upright upon it. Who was the first master of the sea history does not tell us; but he who first adventured on the treacherous main with oar and sail was the hardiest of the race of hardy mariners. That most popular of Roman poets, the much loved Horace, well says:

"Oak and treble brass
Guarded his dauntless breast
Who gave his shallop first
To the blasts of east and west.

"Heedless of death was he
Who drove his vessel forth
To dare the hurricanes
That sweeps from south to north."

That earliest conquest over the inhospitable ocean remains uncredited by history to the genius who first achieved it; but his genius unwittingly gave primitive civilization to the world along both coasts of the Mediterranean Sea.

There remained one element, one realm only to be conquered, that of the air. It was dreamed over, put into the fable of Icarus, whose waxen wings melted as he came too near the sun; it was puzzled over from before Leo-

nardo's day by philosophers and inventors for centuries, who were humiliated that a baby robin could so easily learn to do what they in vain attempted. Must it be, said they, that the eagle, the lark, the humming bird, nay, the butterfly, the midge, could spurn the earth so easily, while man, ruler of the earth, must cling to earth, forbidden the sky?

But it was not so to be. Very shortly after the discovery of the New World, in the first biblical polyglot, printed in Genoa, the editor indulges in proud Latin comment as follows on the psalm, "Their line is gone forth thru all the earth, and their words to the end of the world." In our own day has this been fulfilled by the wonderful daring of Christopher Columbus, a Genoese, who has discovered almost a new earth." So now, at last, in our own day, by the wonderful genius of Wilbur Wright and his brother, Americans, has a new heaven been added to the conquests of man—earth and sea, and now the sky. Henceforth man walks the earth with the beasts of the field, swims the sea as do the monsters of the deep, and now and ever will fly the air swifter than eagle or albatross, ruler of the three elements; and, by his capture and taming of the lightning, master of fire, the fourth.

Hereafter the names of Wilbur Wright and his younger brother Orville will be linked with those of the great men whose inventions have blest the whole world, Watt and Stephenson with the steam engine, Fulton with the steamboat, Morse with the telegraph, Edison with the electric light and Bell with the telephone. How many of these men do we take pride in as Americans! Surely not in vain did the Genoese discover America, even in the physical triumphs that have created our civilization, as well as in the example of government by the people which all the world is following.

Wilbur Wright was content to do things, but, the shyest of men, he kept himself silent and hidden, whether perfecting his invention in the wilds of North Carolina, or in Paris and Rome avoiding the applause of kings. There are great men who love the limelight and can pour forth torrents of words which delight the listening crowds, men who

can also do things and are quick to tell that they did them, and how much more they can and will do. They are the popular idols who draw behind them a trail of welcome glory; men who, like Cæsar, make sure to publish their own annals. Wilbur Wright was none of these. His was the greatest of modern victories, but not in America and not in Europe did he make one curve of flight for sensational effect. He was never interviewed. His confidants were his brother Orville and his sister Kate. The glare of publicity and praise he could not endure, for he was a simple, great man, so simple that he refused even in France and Italy to give exhibitions of flight on the Sabbath day, so retiring that even the townspeople of Dayton hardly knew him and what he was doing; and yet this plain, humble bicycle-maker will hold the world's memory and fame when statesmen are forgotten and emperors and kings are distinguished in history only by the numbers attached to their names. Such men as Wilbur Wright do not need to blazon themselves with medals and orders of distinction or to herald their claims to glory, for the world is their country and the world takes care of their fame.

That Wilbur Wright should have died of a preventable disease is sad evidence that our civilization has not reached final perfection.

The Menace

IN the decade before the Civil War a great scare shivered the country with the fear that the Roman Catholic Church was about to capture the nation and overthrow our liberties. It culminated in the organization of a secret political party known as the Know-nothings, which captured State after State and ended with the destruction of the Whig party. It was a short madness, and the menace has not yet made our people vassals of Rome. We have absorbed many millions of Catholic immigrants, but our liberties yet remain to us, and a plethora of primaries, initiatives and referendums assure us that our freedom is yet intact.

But of late a new shiver shakes a section of our population, and it finds ex-

pression in a journal we hear of named *The Menace*, which adds a new fright of Rome to that which is uttered by one or two Irish journals of the Scotch variety. Questions come to us from a few subscribers like this: "Is Roman Catholicism a menace to the United States?"

It appears to us that one does not need to sit up nights to worry about the menace of Roman Catholicism. Indeed, that Church is worrying a good deal more about the menace of Protestantism. By a liberal calculation, counting in all who have ever been baptized, no matter how utterly they have given up their faith, Catholicism claims fourteen millions of people, but one in seven of our population. Their numbers would forbid their being a menace except in certain cities where they congregate; but in not one of which have they overthrown a single one of our cherished institutions. They are much more given to building expensive churches and cathedrals, and giving grandeur and dignity to their higher clergy, and in various displays, processions and shows than they are in overthrowing anything. They are much afraid that their people will run away from them, and they tell each other that if they could have held their own children they would now be twenty or thirty millions instead of fourteen. To keep their own people they found many hospitals and orphanages, and they build parochial schools to teach their boys and girls, and boarding schools for the few who can pay. These are not dangerous; they are of benefit. The only anxiety any one need to feel is from the claim of their clergy that the State should support their parochial schools. But we do not believe the Catholic laity desire it. They have most of them been educated in the public schools, except the first few years when learning their letters and catechism and prayers; and just now Catholic priests are telling their people that much of this memorizing does not stick. In a Protestant environment they say it is too soon unlearned. Their papers are quoting with futile comments a bright letter from a Catholic young woman who complains that there are more old maids in the American Catholic Church than in any other communion in Christendom.

and that the reason is that boys and girls educated by the Church apart from each other in its colleges and convents have no such fair chance to get acquainted as Protestant young people have, and the girls are more likely to meet desirable Protestant young men, but whom they are forbidden to marry.

What is the basis of this menace that these timorous souls are concerned about? Is it that our Government has been tender in its dealings with Catholics? Probably. It is not strange that a President or a Senator has political votes in mind. The negro vote, the temperance vote, the saloon vote, are all considered as well as the Catholic vote. Roosevelt and Taft have been very good to the Catholic Church in the Philippines and in Cuba. Roosevelt sent Taft to Rome to settle with the Pope the Friar lands trouble. Taft postponed Commissioner Valentine's order forbidding the wearing of the religious garb in Indian schools. The Commissioner was right in principle, but the error was an earlier one in giving continued Government support to any religious schools. Besides, there is no menace there. Indians are an insignificant contingent anyhow. It is important that justice be done them, as must be done to other persons confined in prisons and hospitals; but the country's future depends on citizens, and on well people and those who mean to obey the law. This matter of garb has made more rumpus in ecclesiastical circles than it is worth. Nor is there anything more than an occasion to laugh in the suppression of Tom Watson by the Georgia delegates to the Democratic convention because he had in his own rude way lampooned the dignitaries of the Catholic Church. Of course they did not want as their spokesman a man who would drive off Catholic votes. Theirs is good politics, but it does not amount to a menace.

To regard the Catholic Church as a menace is to fear the valency of the truth. Who ever saw the truth put to the worse in a fair encounter, and a fair encounter it is in this country, with the chances in favor of the majority, which is quite as intelligent and quite as earnest and quite as religious as the one-seventh minority. What show of peril

there is pertains to the ultramontaniam that just now rules in Rome, and that is not a real peril except to the Church which suffers from it and shuts the mouths of its scholars by its edicts and its system of espionage, which requires every suspicion of modernism to be reported by the bishops to Rome. The Catholic Church has suffered sadly from this kind of policy during the reign of Pius X, but this ought to give glee to our present Know-nothings, as it does grief to us, who see in that Church a future source of blessing to its members. Yet this is but a temporary aberration. Under another Pope—and it is not long—we may expect a relief to burdened consciences; for Rome cannot escape, and being set free would not escape the pressure of the age; would be and will be hospitable to every conclusion of science and criticism which God lets us learn. So spoke Archbishop Ireland in his fine sermon at the Catholic centennial at Baltimore, and so he will yet be allowed to speak again.

We have said it is a fair field between the two camps of faith in the United States, and we need not fear the result, for truth will prevail. But we did not speak with absolute correctness. Our Government gives equal privilege to both, and prefers, if she favors either, to favor the weaker, and the weaker are grateful to either President. But it is not quite a fair field, for the Catholics are not only in the minority, but they are handicapped by the fetters put upon them by Rome. They must all speak one voice, and that a voice imposed. When free they will be stronger and in better courage, and with a better cause. Then we may hope to see more fellowship, more unity of purpose for the good of people; and in it all no menace, only benefit of service for the nation and the world. We are all Christians, disciples of one Master, and it is a pity we are so much apart. We need to consider the old fable of the bundle of sticks.

The Larger Efficiency

THE efficiency idea is bigger than any of its expressions to date. To shovel more coal, or lay more bricks, with a given expenditure of energy, is worth

while, other things being equal. It happens, however, that the really monstrous wastes are in the other things. The chief value of the experiments thus far made lies in their suggestiveness. On every hand able men are coming forward with meritorious plans for an efficiency reformation in those domains where waste is at its worst.

For example, Mr. H. Fitz John Porter has been calling attention to the monstrously inefficient methods which American employers of labor have thus far used in their relations with wage earners.

Most of our industries, as he remarks, have grown up with amazing rapidity, crudely, out of crude conditions. We have had no trained executives to manage the great enterprises that we have blunderingly created:

"Men competent to run them were not in existence. We drafted men of high intelligence from everywhere and put them at the tasks, which they accomplished according to the methods they invented on the moment's spur."

What these methods have been, so far as they have been applied to the management of armies of working men, including great numbers of the foreign born, Mr. Porter tells us without any mincing of words: "Without knowledge how best to handle such men, our managers discovered it to be among the possibilities to make things work, after a fashion, by simply turning on the power and driving."

We have evolved, therefore, instead of an industrial democracy, a congeries of despotism, of capital on the one hand, and of labor on the other—an industrial world made up of business monarchies in which leaders are not automatically developed from groups by superior qualities but are chosen by the monarchs and put over the men.

This system, or lack of system, means recurring industrial war with losses in comparison with which the incidental wastes of daily operation are insignificant.

It is interesting to learn what possibilities of reorganization and efficiency are seen by an industrial engineer who has so accurately surveyed the field. Organization, Mr. Porter regards as the first requisite. It should begin as far back

as the physical grouping of shops or factories, about industrial administrative centers. New York City, he says, "is inefficient to the last degree." "The world has never seen a spectacle so extraordinary of sheer waste of money, effort, brain and everything which may be looked upon as an asset of humanity." We should have in this town about forty industrial groups, each with its central administrative building. The cloak industry, for example, instead of overflowing into Fifth Avenue, and spreading miscellaneously, should be segregated. Such industrial groups, instead of the old districts or wards, should be the basis of our municipal organization.

Next employers should be organized, and so should the wage earners, but by industries, not by crafts. Then strikes, and all their attendant waste, could and should be obviated by the methods which Mr. Porter successfully inaugurated for the benefit of the cloak industry. The plan is simple to a degree, which is one recommendation, and the other is that it works. Both organizations are "recognized" as a matter of course. There is no "open shop" side show. A joint board is established, to which all disputes are referred. In case of a disagreement an appeal can be made to a board of arbitration consisting of three members.

This simple plan Mr. Porter would have extended and generalized by an equally simple device. Every industry should be organized on industrial lines and each should have its joint boards and the public should be represented by a labor department of the Government. Back of all this the Government should have authority to fix a minimum wage by law, to limit hours of labor, and to regulate industry thru scientific management, so as to put a stop to such intolerable conditions as the seasonal fluctuations which annually or twice a year throw hundreds of thousands of able-bodied workers into involuntary idleness.

More interesting than any other one aspect presented by this up-to-date program of the larger efficiency is its obvious genuineness as a product of the experience and first-hand thinking of a successful industrial engineer. For there is no reason to suppose that Mr. Porter

made it up by ingeniously putting together planks from the platforms of the syndicalists and the socialists.

The Senatorial "Titanic" Report

THE report of the committee on the "Titanic" disaster is not delayed, and it is full and fitting. The English criticisms of Senator Smith, chairman of the committee, are not justified, even if the Senator from Michigan is not a salt-water seaman. At least there was no effort by the committee to keep anything back.

The report takes two directions, one the assignment and distribution of blame for the terrible loss of life, and the other the suggestion of needed legislation.

First, and very properly, blame is put on Captain Smith for his recklessness in forcing the vessel to its best speed in the most dangerous of all zones. Warning was sent not less than four times by other vessels that there was ice in sight, but there was no conference of officers, no apparent consideration of the danger, no increased outlook, but on the contrary, more forced speed. We are not told that any one but the captain was responsible for this, but we wish the British investigation might show what instructions had been given by the owners of the line in this matter; orders which, if received, he ought not to have obeyed. The report does, however, give him praise for doing his best when the accident—if we may call it so—came, and that he then proved himself a man fit to have lived. It is well that no special blame is put on Mr. Ismay, for there is no clear evidence that he failed of his duty, except the extraordinary fact that no women were said to have been in sight when he took to the last boat, altho Mr. and Mrs. Straus were still on board.

The White Star Company is properly condemned for the fact that there was no suitable provision for saving life, no drill of the sailors, and further, that the bulkheads separating the watertight compartments did not close properly. It is the British investigation which shows that they were actually opened to let in the water, a stupid fatality quite inexplicable.

Much attention is paid in the report to the culpability of the captain of the "Californian," who was near by and who paid no attention to the wireless reports and the rockets, while if he had done his duty he might have saved every life. This is one of the terrible facts of this disaster that amaze and horrify every one. He will carry a sad burden of remorse all his life. Equally so, if they have any heart, will those who are responsible for the fact that half-filled boats did not go back to save those who were crying in the water for help. The mark of Cain will remain branded in their hearts if not on their foreheads.

The recommendations are well worth consideration. It appears that the inspection laws of various countries, and particularly of Great Britain, are antiquated and need revision. Our own law requires us to accept their inspection of foreign vessels. The law suggested is that foreign inspection be not accepted for vessels carrying passengers from our ports unless they come up to the standard which we require. This covers the provision for lifeboats sufficient for all passengers and crews of vessels licensed to carry passengers; also the assignment to each boat of four skilled seamen, with proper drills not less than twice a month, and also the assignment of passengers as well as of crew to each boat before sailing.

Much attention is given to the control of the new wireless equipments. It is asked that every vessel carrying as many as one hundred passengers shall have a wireless operator on duty day and night, having immediate connection with the bridge. There should also be legislation to prevent interference by amateurs and secure secrecy of messages. It is also recommended that it be forbidden that on the high seas rockets be fired except as signals of distress.

Of other recommendations, such as those which refer to the structural safety of passenger vessels, we do not need to speak. They belong to engineers for consideration. Indeed, legislation must be concurrent between the great sea-going countries. We await the conclusion of the British commission's work, for we can be sure that this sad and

terrible catastrophe will be made the occasion for the safety of multitudes of passengers for all future time.

The New Presbyterian Catechism

THE new Catechism presented to the Presbyterian General Assembly by the committee previously appointed for the purpose is a worthy document, altho it will be open for revision for another year. It is very different in language from the old Assembly's Shorter Catechism, which is one of the standard creeds of the Presbyterian Church, and will doubtless replace it to some extent, altho we doubt whether it will be committed to memory by children any more than that is.

In doctrine it does not essentially differ, altho there are some omissions, but the language is more flexible, so that it does not seem to be so severe.

The first answer does not tell us, like the old, that "Man's chief end is to glorify God and enjoy him forever," but answers the question, "What do we most need to know?" thus: "We most need to know what God would have us believe and do." This is a decided improvement, but we should have put the doing before the believing, and perhaps have left out the believing, as it is so much less than the doing. The doctrine of the Trinity is thus given: "There is only one God, the true and living God, yet in three persons, the Father, the Son, and the Holy Spirit." That theological term "person" thus is retained.

The words *Heaven* and *Hell* do not appear at all in the Catechism. The doctrine of the latter is found in this answer:

"The consequences of sin are estrangement from God, increasing sinfulness in ourselves, injury to others and the righteous judgments of God in time and eternity."

That leaves latitude for those Presbyterians who cling to the eternal hope.

The pre-existence of Jesus Christ, the virgin birth and his resurrection from the dead are all clearly set forth. The atonement is not definitely defined, of course, and we are simply told:

"Jesus Christ died on the cross, the just for the unjust, that he might reconcile us to God and save us from our sins."

Here there is no teaching of any propitiation or substitution which reconciles God to us, only us to God. The doctrine of faith is given in these words:

"Faith in Jesus Christ is believing in him and trusting him as our Saviour and Lord."

We might wish that faith in God as Father were put into the definition, seeing that all the faith of the eleventh chapter of Hebrews is excluded, but by which the elders obtained a good report. The doctrine of inspiration is mildly put, as it should be, when we are told that it "is the Word of God, a collection of books, written by men who were guided by God to teach us about himself and his will."

The special points of Calvinism are not visible unless adumbrated in the statement of the Holy Spirit "disposing and enabling us to accept" Jesus Christ. It is quite proper that the children are taught that they belong to that branch of the Church called Presbyterian, and they are informed what is a session, a presbytery, a synod and the General Assembly, and in the local church what are pastors, elders, deacons and trustees. It is a very good catechism to read, or refer to, and use as a substitute for the one to be laid away in sepulchral honor, but hardly to be a burden to the memory.

Fluids and Digestion

It is curiously interesting to note how many false persuasions exist with regard to matters of health and how many simple, natural desires people deny themselves as a consequence of their *belief* that they know they will not be good for them, because they have read somewhere or heard from some one that such things are harmful. It has taken a long while to make people understand, for instance, that the night air is not unhealthy, and that the only pure air at night is the night air, and that it is a little purer than day air because it contains less dust. It is rather startling to go back sixty years and read Florence Nightingale's emphatic insistence on this same point and then realize that in the two generations that have passed since we have accomplished so little in properly directing the popular mind that it seems to

many people almost a startlingly new proposition to say that the only fresh air at night is the night air, and that it is eminently beneficial and never harmful except for reasons quite extraneous to the air itself.

Something of this same sort of false impression has asserted itself and obtained a wide vogue with regard to the consumption of fluids. There are a great many people who are quite sure that to take much fluids at any time, but above all, to drink liberally of fluids during meals, is sure to disturb digestion. The stomach is declared to become over distended by it, the gastric juice is diluted; there are some who even are so thoroly pseudo-scientific as to say that blood pressure is increased by the presence of a greater amount of fluid in the circulation and all results are harmful. Most of this impression is quite as untrue in the light of what we have come to learn in recent years about digestive processes and the circulation as the old dread of the night air.

It is now more than a quarter of a century since Prof. Austin Flint, of New York, in an article on the "Dietetic Treatment of Dyspepsia," read before the New York State Medical Association insisted that most of the old saws with regard to diet in health and disease were false, and that instinct was the most precious guide in this matter. He was particularly impatient with those who deem it important "to restrict the amount of liquid as far as practicable, so as not to dilute the gastric juice, and who consider that total abstinence from drink was a good sanitary measure, compelling the body to derive the need of fluids exclusively from fruits, vegetables and other solid articles of diet." He said very emphatically, "In the quantity of drink follow nature's indication—thirst. Experience shows abundantly that with a view to comfortable digestion there need be no restriction in the ingestion of liquids."

Many people are likely to think that a medical opinion written twenty-five years ago and more is not likely to carry much weight at the present time. Unfortunately a good deal of the teaching of hygiene since then has apparently contradicted what Dr. Flint said. A popu-

lar book on hygiene published recently contradicted him completely when it said:

"We can lay down the definite and certain rule that water should never be drunk at meals, and preferably not at least for one hour after the meal has been eaten. The effect of drinking water while eating is, first to artificially moisten the food, thus hindering the normal and healthful flow of saliva and the other digestive juices; secondly, to dilute the various juices to an abnormal extent; and, thirdly, to wash the food elements thru the stomach and into the intestines before they have had time to become thoroly liquefied and digested. The effect of this on the welfare of the whole organism can only be described as direful."

This has been the common teaching in our public schools in most of the country.

It is not any wonder with such opinions that the popular impression with regard to the harmfulness of water drinking should be prevalent. The most recent serious studies of the subject completely contradict the popular hygiene, however, and substantiate Professor Flint's opinion. The ideas of popular hygiene are founded on pretty theories. Professor Flint's opinions were founded on observation of patients, and now his expressions are confirmed by the thoroly scientific investigations of Professor Hawk, of the University of Illinois, and his pupils, who for some seven years have been studying and writing on this subject. Professor Hawk denies that water drinking is harmful:

"After water drinking at meals there is a better digestion and a more complete utilization of the protein food and that this effect is much less marked with a small water ingestion than a large one. It is also more or less permanent, with the result that in an individual accustomed to taking considerable water with meals, the effects of decreasing or increasing the amount of water taken is not immediately obvious."

As the digestion of protein materials is perhaps the most important function of digestion, furnishing materials particularly for rebuilding tissues, the significance of this conclusion of Professor Hawk can be readily understood.

Not only are the proteins better digested, however, by dilution, but it was also found that a similar result occurred with regard to the digestion of fats. When nature made milk a complete food the dilution was carried to a very high

extent. We ought to have taken a lesson from this, but we have preferred to theorize learnedly with regard to the harmfulness of fluids. Perhaps the most interesting conclusion reached by Professor Hawk and his pupils, however, was that much less material from the food is excreted after the consumption of the same amount when an abundance of fluid is taken than when the free consumption of fluids is avoided. In this day of high prices of food materials the occurrence of this greatly reduced waste by the simple introduction of economical water into the dietary would seem to carry great weight. The fermentative processes in the intestines, especially those due to bacteria, seem to be lessened when an abundance of fluid is present.

There has never been any question but that the taking of fluid in considerable quantities stimulated intestinal functions. Indeed, it has often been said that one of the reasons why this is a constipated generation, as newspaper advertisements proclaim, must take pills by the million and laxatives by the hogshead and purgatives by the ton, is that we have to too great an extent got away from taking sufficient fluids. Only those who exercise vigorously in the open air are likely to have an active thirst, except in hot weather. In our steam-heated houses so much water is taken out of us by the hot dry air, that entirely too little fluid is present in the tissues for Nature's functions. Following instinct and drink as much as you feel like drinking. This must not interfere with mastication and liquids must not be taken merely for the sake of washing down unchewed food, unmixed with saliva, but an abundance of fluid is natural and healthful and not harmful, all the rules of popular hygiene and physiology to the contrary notwithstanding.

This Vacation Number and Next Year's

We present our Vacation Number to our readers with our good wishes for the vacation that they have, we hope, already planned for themselves. And this reminds us of something. The Vacation Number has now become an annual affair, and we hope that our subscribers

will not put off until next winter or spring the pleasant task of telling us something of their 1912 vacation experiences. If you do not now fully prepare an account of some incident of your outing, you will, we hope, preserve notes of it—your letters home, for instance, and photographs or sketches. Then you will be prepared to co-operate with us in making next year's issue even better than the present one.

Laurier's Interpretation

That the publication by President Taft of his letter to "Dear Theodore," asking his support of reciprocity and telling him it would make "Canada only an adjunct to the United States," should have proved a boomerang more than a javelin has doubtless been a great surprise to the writer. He published it to prove by Roosevelt's reply that reciprocity then had Roosevelt's full approval; but the main effect has been to make it appear that Taft desired to humble Canada before the United States and that he had not been frank to Canada and the public when he had represented reciprocity as a benefit to both nations. Now we do not believe that there was any duplicity about it, or that he had anything political in mind, or that Canada would be an adjunct in any other than a financial sense, which it certainly is and will be in any way. But Mr. Laurier's address last week at the great Liberal dinner in Ottawa shows what a blunder the publication of that correspondence was, and the indignity it is felt to have been to Canada. Mr. Laurier, who was head of the Canadian Government when the treaty of reciprocity was negotiated, is amazed that President Taft should have written such a letter, which "borrowed the shallow rhetoric of Canadian jingoes"; and he makes no difficulty in preferring Mr. Roosevelt's interpretation and in showing that the opposition of lumbermen, fishermen and farmers to reciprocity was just as bitter in this country as any in Canada, and that it was a combination of special interests in the two countries to "save their monopolies and trusts" that defeated a beneficent measure. We believe in Mr. Taft's good faith, but he ought to have seen that the language

would be otherwise interpreted and would injure reciprocity in the future. Where were his advisers when it was agreed in council to publish the correspondence? They thought only of how to down Roosevelt.

A Candidate for the Senate Thomas W. Lawson, a Boston broker, and author of "Frenzied Finance," has broken into politics in a new and frenzied way. He has decided that he is the proper Republican to succeed Senator Crane, and he has put a large advertisement into the daily papers and the agricultural papers of the State asking that 30,000 voters will sign a pledge to vote for him at the Senatorial primary. We have known nothing like his appeal since the time of the tribunes of old Rome. He says: "Mr. Voter, let us understand this matter. I want this job." What he tells Mr. Voter he wants it for is this:

"If you give me this job I will go into the Senate pledged to do one thing—*assist in smashing High Cost Living*—and in accepting your votes I pledge myself that I *know what has caused High Cost Living, and that I know how High Cost Living can be smashed.*"

If he knows how to smash the cost of living without smashing business and credit and employment and the ability to purchase the necessities of life he is a wise man and ought to be made Senator; and he ought to tell us how he will do it. His method he does not hint to Mr. Voter, but asks to be trusted on his word. That is all he says in four columns, that he wants the office and will smash high cost living. He believes the next President will be either Roosevelt or a Democrat, probably Bryan, and possibly we may guess from this how he hopes to guide them in smashing high cost living. He is an admirable candidate—he tells us so—because, tho a Republican, he can poll more Democratic votes than any other man; because he can write his arguments for the people and the press and pay the expense of his canvass without the help of "any politician, demagog or blatherskite." The fact that he has no political experience is no reason against him, for,

"There are many members of the present United States Senate to whom some of my own business lieutenants could give cards,

spades, the deal and the deck, and then lick them to one of Colonel Roosevelt's frazzles on any subject of real importance to the American people."

He believes the Lower House will support the next President, Roosevelt or Bryan, in smashing high cost living, but the Senate needs him to tell its incompetents what they must do. It is a lively and amusing canvass that he has begun, and it would not be strange if its blazing self-assurance should win. Such cases have occurred, altho in this respect we are not sure but he could give cards, spades, the deal and the deck to William J. Bryan. As THE INDEPENDENT is not a Massachusetts journal it will be understood that this advertisement is not paid for.

Parcels Post We frankly confess our disappointment at the recent action of the House of Representatives, in voting down a real parcels post. The bill as passed has been aptly called "the parsimonious post." The fact that Mr. Underwood withheld his vote, and that Speaker Clark threw his influence for the express companies, indicates that the Democratic party does not wish to incur the ill will of these companies just before election. The Democratic leader voted on the two preliminary questions, but was out of sight at the critical moment. Speaker Clark recognized Mr. Madden, of Illinois, a man active in subverting the wish of the people, when he should have recognized Mr. Mann, the minority leader. Mr. Mann insisted that the Chair recognize him, but he was ignored entirely. Twenty Republicans voted with the Democrats, and so the people's will was once more thwarted. The fight for honest and practical parcels post is shifted to the Senate. There the struggle will be between the Sulzer flat-rate bill and the bill drawn by Senator Bourne. We believe that farmers in general are strongly in favor of Mr. Bourne's method of settling the question. He proposes to vary rates according to the distance of haulage, for "otherwise the express companies will underbid, and secure the short haulage, and leaving all the difficult work to the Government." He writes to *The Country Gentleman*: "My bill proposes a rural and

city delivery rate of five cents for the first five pounds, and one cent for each additional pound; that is, fifteen cents for an eleven pound package." The Post Office Department has thoroly considered Mr. Bourne's plan, and reports that "it can be operated on a narrow margin of profit, and without any fear of the congestion of the parcels post business."

Prof. Gilbert Murray's Impressions

While engaged in Amherst College to conduct classes and deliver lectures, the Regius Professor of Greek in Oxford University found opportunity to visit and lecture in a number of our leading Eastern universities, and he gives his impression of them. He says:

"Deep decay has eaten into the study of the classics in America—and widespread consciousness of it. I was struck by the general sense of regret for the lost inheritance.

"The decay is in part due to Dr. Eliot's policy at Harvard. He abolished compulsory Greek. It was an experiment which should have been tried in a laboratory less noble than Harvard."

He believes in the quick, cheap business education for those who cannot wait, but wishes Oxford to "continue to teach the classics in the old thoro way." Yet he admired our universities:

"The features of the American universities which particularly imprest me were their excellent libraries, the swift effectiveness with which they punish or drop men who do not pass exams, and the vivid, vigorous spirit which colors and animates the whole of their university life. I believe they allow athleticism to absorb too much of the time and energy of the student, and not only athleticism, but various dramatic competitions absorb and tend to swallow up sacred hours."

We all know this is true; but fortunately it is not so true of many of the Western institutes, where the boys go to study and learn.

In a late address Mr. Willis B. Dowd collects the following instances. In Florida a negro named Jim Henry was convicted of an assault with intent to murder, on circumstantial evidence, sent to the penitentiary, and hired out for a year and a half, earning for the State \$431.81. It was then discovered that he had been wrongfully

convicted, and he was "pardoned" for a crime he had not committed, but a special bill was passed refunding to him the money he had earned, but nothing more. In New York John Roberts was "pardoned" after serving seventeen years for a crime of which he was at last proved innocent. The Court of Appeals decided that under the law he had no financial redress. In Pennsylvania it was discovered that a man in the penitentiary for twenty years had been wrongfully convicted. There was no law by which the State could in some measure repay him for the wrong it had done him, and Mr. Carnegie gave him a pension. But why is there no law reimbursing one who has suffered so bitterly? It is simply because legislatures have failed to do their duty.

Electricity on the Farm

A corps of engineers has recently visited some of the farms where electrical power has in some degree displaced animal power and wind power. The committee reports from one farm near Dayton, Ohio, that they found three electric motors in operation, two of them devoted to pumping, and a 15 horse power motor mounted on a truck and movable about the farm for the purpose of driving machinery. It found that 40 bushels of corn and cob could be ground in a single hour with this large motor, at a cost of 4 cents a bushel, including labor at 15 cents an hour and allowing for interest and wear and tear. The actual outgo was less than 2 cents a bushel. A six-roll husker produced two tons an hour, at a total cost of \$2.85 a ton, only 27 cents of which was the actual cost for running the motor. Forty-one and a half bushels of shell corn were ground in an hour, at a cost of a trifle over 1 cent for the power furnished. Three washers full of soiled clothing were washed in 57 minutes for 4½ cents. A portable vacuum cleaner cleaned 100 square feet of floor surface for 2 cents; 7 horses were cleaned thoroly in one hour, costing 3 cents for each horse, including help. Nearly 100 pounds of butter were churned, washed and worked in about half an hour, at a cost of a trifle over 2 cents. One ton of hay was hoisted for 2½ cents worth of power. For 10 cents

a ton two tons of fodder were cut in a single hour. The committee reports a good deal farther than this in the way of items, but this seems fairly to illustrate the change that is coming on in the way of farm work. The revolution will cover small farms as well as large ones, for a four horse power engine can be installed for pumping and farm work and house work for a trifle over \$100. The country home is in this way placed a little in advance of the city home in the way of modern applications of power. The compressed air system is more costly in the installation, but it is vastly in advance of any other system if we count in protection from fire and the forcing of water up hill. An irrigation system can be installed with compressed air that will irrigate several acres of land, throw a stream of water over a two-story house, supply water for cattle at some distance from the well, and otherwise reduce the amount of labor on a farm and increase its conveniences remarkably. It will cost about twice that of the tower system. It is never dependent upon wind and is always ready for work.

The Korean Conspiracy

We have previously called attention to the arrest of a large number of Korean Christians charged with a conspiracy for the assassination of General Terauchi, who has been the Japanese Governor of Korea since the assassination of Prince Ito. We give from the *Seoul Press* a statement of the later developments. Prosecutions have been brought against eighty Koreans charged with being parties to the conspiracy, of whom sixty are said to be converts belonging to the Presbyterian Church. The esteemed mission school at Syonchon is closely connected with it in the charges. The whole number of those arrested is 150. Secret meetings of the conspirators are said to have been held at this mission school. Among those to be tried are the Rev. Yang Chonpaik, a conspicuous member of the Korean Christian tourist party which recently visited Japan; and Baron Yun Chiho, vice-president of the Korean Young Men's Christian Association, said to be one of the foremost ring-leaders of the conspiracy. It was feared

that when Japan first took control of Korea, not a few Koreans professed themselves Christians for political purposes, hoping to use Christianity and the Y. M. C. A. for action against Japan, and one missionary was violently anti-Japanese, while the others carefully abstained from political action. We hear nothing of late of the effort to secure a million converts in Korea this year.

The union of two denominations into one is so good a thing that it is worth while to have to suffer some lawsuits provoked by those who do not love their brethren. The case of the union of the Free and the United Churches of Scotland to create the United Free Church is a notable example. Another case is the union of the Cumberland Presbyterian Church with the larger Presbyterian Church. The recalcitrants brought suit in many States, but in the nine States of Georgia, Kentucky, Texas, California, Indiana, Illinois, Arkansas, Alabama and Mississippi the Supreme Courts have sustained the union, while in two States, Tennessee and Missouri, the Supreme Courts have favored the anti-unionists. But these cases will reach the United States Supreme Court.

For eight successive quadrenniums was Dr. James M. Buckley elected editor of *The Christian Advocate* by the Methodist General Conference, he choosing the editor's chair to the office of bishop. For many years he has been known as the ablest and most versatile debater on the floor of the Conference, being one of those men who can speak extemporaneously with no less exactness and lucidity than they can write. He refused reelection, and retires to the unofficial service of the Church in a private capacity, having reached ripe years and honors, and yet, like Dr. Richard Storrs, threatened from youth with but a brief life. Religious journalism loses by his withdrawal one of its most noted and valued leaders.

Six months ago we published the likelihood that the Pope would consider the question of setting a fixed date for Easter instead of letting it wander about for a

full month, depending on the moon's changes. A commission for that purpose has now been appointed, and the Catholic journals are beginning to discuss the matter. Such a change is desirable; and when decided on at Rome it will be interesting to see whether it will be followed at Westminster and York, or whether the Anglican Church will hold back, as has the Greek Church these centuries, unwilling to accept from Rome the reform of the calendar.

Dean Sumner's movement in favor of refusing to marry those who cannot bring a physician's certificate that they are physically fit to marry is gaining support among the clergy, and two hundred ministers of the federated churches in Chicago have approved it. Dean Sumner brings out the fact that Michigan has for years had a law that will fine any clergyman \$1,000 who marries a person having a contagious disease, but it has never been enforced.

It is curious how every new cult from the East or the West borrows the teachings of Christianity as if they were new discoveries. Here is a young Socialist woman who is to marry a young Harvard instructor, and who comes into prominence simply because the marriage is to be by a justice of the peace, who thus expounds her faith: "Socialism breaks up selfishness in man. The married man must not be selfish." That is the old Christianity, nothing new.

By a rule of the House of Representatives an ex-member has the right of entrance and to take a seat on the floor. The other day John R. Lynch, a colored man, who was for six years a member after the war, ventured in, and his presence disturbed the sensibilities of some members, who started the rumor that he would seek election from Mississippi. There is no reason why he should not seek and gain it, if the majority of the citizens want him.

We like for this city and every other city the proposed ordinance providing that in every public building, tenement, saloon, theater or hotel there be placed a conspicuous plate, giving the name of

the owner. This is meant to let police and citizens know who is responsible for the maintenance of unsanitary tenements, law-breaking saloons, Raines law hotels, houses of prostitution, etc. It is an indirect way, but no less effective, to shut up these places by exposing to pitiless publicity the men and women who draw rent for them.

President Rush Rhees, of Rochester University, was seriously talked of for president of Amherst College, of which he is a graduate; and this fact stirred up the friends of Rochester to raise \$1,000,000 endowment to keep him. He has made one of the best of presidents, and we rejoice that Rochester has such good friends.

The separation of Church and State in Portugal logically involves the withdrawal of the legation to the Vatican, and it is well that the Chamber of Deputies has so decreed. It is the business of the Church to keep in communication with the Vatican, not of the State, now that there is no Concordat to be maintained.

France is undertaking to import the twenty-four hour time reckoning system from Italy. In the latter country one can take the train at half-past fourteen—but how strange it will seem to read in next year's travel books that the Paris boulevards are gayest after twenty-three in the evening!

There is good reason to believe that the Dillingham bill restricting immigration is killed for this session. We have shown its narrowness and its danger; and the Democrats who refused to go into a caucus to support it deserve praise.

It is nothing short of race suicide which the last French census shows—34,869 fewer births than deaths in the year 1911. Here is a field for true constructive statesmanship, for we cannot believe that human nature has decayed.

The depression of trade may be a good thing, as when, as in India, they are disturbed over the smaller demand from China for opium.

FINANCIAL

New Building of the Emigrant Industrial Savings Bank

THE new building of the Emigrant Industrial Savings Bank, located at 51 Chambers street, New York, has been completed and is now ready for occupancy. The building is fifteen stories high, and is the largest savings bank building in the world. The architect is Raymond F. Almirall and the builder Charles T. Willis, Inc. The construction is fireproof thruout, and provision has been made for the latest facilities, such as the dictograph and the telautograph. The façade is of Indiana limestone, resting on a base of granite; the hallways, floors and entrances are of solid marble and the staircases are of bronze.

The charter of the bank was granted on April 10, 1850, to eighteen well-known merchants and citizens, who met at the invitation of the Right Reverend Bishop John Hughes, subsequently the first Archbishop of New York. Many of these citizens were trustees of the Irish Immigrant Society, a charitable association started in 1841 to help and protect immigrants from Ireland. In the first year of the bank's history there were 265 depositors and \$34,935 in deposits. Today the Emigrant Industrial Savings Bank is the largest in the world, with \$114,734,146 of deposits.

Since the organization of the bank there have been but six presidents, as follows: Gregory Dillon, 1850-1854; Joseph Stuart, 1855-1864; Henry L. Hogue, 1865-1890; James Olwell, 1891; James McMahon, 1892-1905, and Thomas M. Mulry since 1906. The present officers are Thomas M. Mulry, president; Myles Tierney, first vice-president; Michael E. Bannin, second vice-president; Louis V. O'Donohue, secretary; John J. Pulleyn, comptroller, and John S. Daly, deputy comptroller.

Union Dime Savings Bank

ALEXANDER P. W. KINNAN, vice-president, who was recently elected president of the Union Dime Savings Bank to succeed Charles E. Sprague, deceased, has for twenty-five years been a member

of the real estate firm of J. Romaine Brown & Co. He was born and bred in New York, was educated at Lawrenceville School in New Jersey, and is now president of the Lawrenceville Alumni Association. He is a member of the executive committee of the board of directors of the Mutual Bank, and is also a director of the New York Fire Insurance Company, the New York Plate Glass Insurance Company, the Manhattan Life Insurance Company, the Robert Crooks Company and other corporations. He is secretary of the Arrow Realty Company, and was recently elected an honorary life member of the Real Estate Board of Brokers. Mr. Kinnan is a thirty-second degree Mason and a trustee of the Kane Lodge of this city. The vice-presidents of the Union Dime are Frederick H. Ecker and Clermont H. Wilcox. The other officers are Francis M. Leake, treasurer; William H. Locke, assistant treasurer, and William G. Ross, secretary. The depositors of the Union Dime have on deposit \$33,717,097. The surplus, according to the last published report, was \$2,975,089 and the total resources were \$36,702,803.

....Having purchased for \$25,867,863 the Union Castle Line, the Royal Mail Steam Packet Company is now the largest corporation of its kind in the world, owning 295 ocean-going ships with a tonnage of 1,380,570.

....It is estimated that 5,000,000 apple trees and 3,000,000 peach, pear or cherry trees have been set out in the State of Washington this spring. Orders for 3,000,000 more were not filled.

....Morris & Co., the Chicago packers, have established a pension system for their employees. Edward Morris, the president, contributes \$500,000 to the pension fund.

....Canada's Minister of the Interior cables to London that Western Canada's wheat crop this year promises to be 200,000,000 bushels.

....A recent decrease of the amount of money sent abroad is attributed to the establishment of the postal savings bank system.

THE EMIGRANT INDUSTRIAL SAVINGS BANK

....Dispatches from Winnipeg say that "the J. P. Morgan interests of New York" have bought, for \$30,000,000, the street railways and the heat, light and power plants in that city, intending to expend \$15,000,000 in extensions.

....The aluminum output of the United States has grown from 61,281 pounds in 1890, and 920,000 in 1895, to 11,347,000 in 1905; 47,734,000 in 1910.

....The average individual deposit in the savings banks of the State of New York on January 1 was about \$541, against \$530 one year ago, and \$523 two years ago.

....Pension payments since 1865 have amounted to \$4,254,816,147. The annual expenditure exceeded \$100,000,000 for the first time in 1890. Payments last year were \$159,842,287.

INSURANCE

Fire Insurance Rating and Underwriting Results

SEVERAL subjects of public interest in connection with the business of fire insurance were discussed in the annual address of President Babb, of the National Board of Fire Underwriters, before the forty-sixth annual meeting of that body, held in New York, May 23. Among these was that relating to the extension of "State rating" laws—a species of legislation which, originating in Kansas several years ago, has already been imitated in Texas, Louisiana and Kentucky, and is being considered by legislators in other Western and Southern States. In brief these laws deprive the companies of the right to make rates on risks and transfer that function to a State rating commission. Viewed as a transaction in trade, the effect is to take away from the seller the privilege of naming the price he is willing to take for his goods and lodges it in the government.

As Mr. Babb correctly asserts, both the insurer and the insured suffer, within certain limits, the abolition of their right of individual contract. It would be difficult to refute the proposition he makes when he says:

"It appears to me self-evident that whoever pays the losses should make the rates, and whoever makes the rates should pay the losses. If the State make the rates the State should pay the losses and take the premiums. If the State make maximum rates for the insurance companies, leaving the latter to pay the losses, the State should guarantee a reasonable profit on the business, otherwise State rates will prove to be practical confiscation."

On their face, such laws seem to be a violation of the spirit of our institutions. Aside from that, they are impracticable. That fact is obvious. At present, four States are fixing the rates at which the companies must write fire insurance on property within their several jurisdictions. And yet none of them possesses the experience, the data, the facilities, thru which alone proper rates may be made. Aggregate figures, dealing only with losses, expenses and fixed and contingent liabilities, are insufficient. Insurable property is of many classes, each

with its own burning rate; and the burning rate is governed by innumerable circumstances. Without these classifications, the fruits of years of experience, intelligent risk-rating is impossible. The companies only possess the experience.

Another subject of interest was that dealing with the underwriting profit and loss account for the year ending December 31, 1911, and the ten-year period terminating on that day. Our readers must understand that "underwriting" profit or loss excludes all investment earnings and deals exclusively with premiums and the disposition that has been made of them—losses paid, provision for increased liabilities, expenses, etc. The aggregate earned premiums of the 180 companies composing the National Board were, for the year 1911, \$294,071,982. The losses paid were \$158,392,630; expenses, \$116,900,483; increase in liabilities, \$16,840,733; total outgo and reserved for liabilities, \$292,133,846. Underwriting profit, \$1,938,136—which is $\frac{2}{3}$ of 1 per cent. of the total premiums.

The ten-year experience shows an aggregate of premiums of \$2,428,498,862; losses of \$1,363,247,836; expenses of \$927,256,324; increase in liabilities of \$150,394,185; and an underwriting loss of \$12,400,483.

Taking them as a whole, such profit as the companies contributing to this experience made, if any, was due to the money-earning power of their invested assets and not on the "trading" in fire insurance, either for the year 1911, or the ten years then ending. The fact is then obvious that stockholders' dividends must generally flow from the banking side of the business.

THE proprietor of the Imperial Hotel at Washington Court House, Ohio, lost his all in the conflagration which destroyed the business part of the town on the closing day of the year 1911. His insurance had expired a few days before the fire, and, as the property was completely destroyed, he has been living with his wife's relatives ever since. This example should be a lesson to all never to let their policies run out!

Survey of the World

National Politics

Altho the selection of Senator Root to be temporary chairman of the Republican convention was not at first opposed by Mr. Roosevelt, who said it was not an important matter, he changed his mind after a conference with George W. Perkins, Gifford Pinchot and others, and on the 3d published a long statement saying Mr. Root should be opposed by every Progressive. "He stands," said the ex-President, "as the representative of the men and the policies of reaction. He is put forward by the bosses and the representatives of special privilege." A telegram from Chairman Barnes, asking delegates to support Mr. Root, made "the issue perfectly clear":

"It is one of principles, not persons. Mr. Barnes demands Mr. Root's selection as the sign of repudiation of the principles for which I stand, and as an indorsement of the doctrines enunciated at the Rochester convention—doctrines not merely reactionary, but of such a character that no party proposing them could carry a single State in this Union. These doctrines are so bourbon and reactionary that in every open primary in every Northern State since the Rochester convention was held, after full discussion, the people have overwhelmingly repudiated them."

Mr. Barnes, he added, was the representative of the very worst form of bossism in politics. Mr. Taft had been repudiated by a great majority of the Republican party, and could be nominated only by "nullifying the will of the people and by fraudulently seating a sufficient number of boss-picked and boss-controlled delegates in the places of those who have been legally elected." — Mr. Taft's friends controlled the Ohio State convention, elected the six delegates at large by a vote of 390 to 362, and adopted a

platform heartily indorsing his administration. Mr. Roosevelt said this was "pure political brigandage." He won the ten delegates of South Dakota. At the end of the week all the delegates, Republican and Democratic, had been elected, except the Democratic delegates of Vermont.—On the 3d, Mr. Taft wrote to the national committee, asking that its sessions be opened to the public. At the committee's first session in Chicago, on the 6th, it was decided that representatives of the five press associations should be admitted. Mr. Roosevelt's friends in the committee offered an amendment for the admission of about 200 additional reporters. This was lost, 13 to 39. Victor Rosewater (acting chairman) was elected chairman. On the two following days long reports of the hearings concerning contests were published. In these two days 72 cases were decided, all of them in favor of Mr. Taft, and about nine-tenths of them by unanimous vote. In this way 22 of Alabama's 24 cases were settled, but when the remaining 2 (Ninth District) were taken up, the vote was 38 to 15 for the Taft men. This action was denounced by Mr. Roosevelt's manager, Senator Dixon, as "cold-blooded, premeditated theft." Mr. Roosevelt said he had expected only 2 in Alabama. His opponents pointed out that 24 had been persistently claimed, and that argument for all had been made by Ormsby McHarg, representing Mr. Roosevelt's interests. Mr. Dixon asserted that a majority of the committee had deliberately agreed to unseat all Roosevelt contestants and wreck the party. But on the second day, when 48 cases were settled, a large majority of the decisions were by unanimous vote, Mr. Roosevelt's friends

being unwilling to support the Roosevelt contestants. These cases were from Arkansas, Florida and Georgia. On June 10 the four Indiana delegates-at-large were credited to President Taft by the National Committee. The vote was 52 to 0, Senator Borah and the other Roosevelt members of the committee voting to seat the Taft delegates, while Colonel New, whose own right to sit in the convention was at stake, refrained from voting. At Mr. Roosevelt's request William Flinn, of Pittsburgh, sometimes called a boss, was sent hurriedly to Chicago. There was much talk about a possible Roosevelt bolt, but it was said that many of the Roosevelt men would not take part in such a movement. Mr. Taft's manager said the President would surely have 55 more than a majority. He urged Mr. Roosevelt to come and hear the contest proceedings. Senator Dixon said Taft could not carry three States at the election, and that the Taft program of ruin and destruction and fraud, if carried out, would not give the party enough men in Congress to demand the yeas and nays. —The Democratic canvass has proceeded quietly. Mr. Clark is leading, but has not a majority. Governor Wilson stands next. Governor Harmon has 52 and Mr. Underwood 86. In Ohio, Governor Harmon has all the 48 delegates (Governor Wilson's 19 included) by the unit rule. —At the Iowa primary Senator Kenyon defeated ex-Senator Young. Representative Hubbard, of Sioux City, died suddenly on the 4th. It was known on the following day that he had won in the primary by a majority of 2,500.

Congress An inquiry made in the Senate shows that fifty-four are in favor of ousting Mr. Lorimer, while thirty-seven will vote to retain him. He asserts that he will not resign. It has been agreed that a vote shall be taken on July 6. —Mr. Berger, the Socialist Representative, has introduced a resolution demanding the impeachment of Federal Judge C. H. Hanford, of Seattle, who deprived Leonard Oleson of citizenship by canceling his naturalization papers because he is a Socialist. This is the main charge, but Mr. Berger also al-

leges that Hanford deserves impeachment for other reasons. The Attorney General, who says Oleson is the victim of gross injustice, has directed the District Attorney at Seattle to seek a reopening of the case. —By a vote of seventy-two to forty-seven, the House has withheld an appropriation for the Tariff Board, which is sharply criticised in a Ways and Means Committee report accompanying the introduction of the cotton goods tariff bill that was vetoed last year. —The Senate committee insists upon two battleships in the naval appropriation bill, and it is said that two thirds of the Senators agree with it. —The Commerce Court, for the abolition of which there is a movement in Congress, was rebuked by the Supreme Court, last week, when four of the decisions by which it had sought to nullify the orders of the Interstate Commerce Commission were reversed. In upholding the commission the Supreme Court said the new court had exceeded its jurisdiction. It had not been created to supersede or thwart the commission but to supplement it. —The Dillingham immigration bill has been killed by the House Committee, which has substituted for it the much less severe Burnett bill.

Trust Cases In New York, last week, the Government brought suit, under the Anti-Trust law, against the Prince Line, the Lamport & Holt Line, the Hamburg-American Company and its South American line, alleging that the defendants have violated the law by monopolizing traffic with Brazil, using combination agreements, pools, rebates and other devices. —Testimony in the suit against the Atlantic steamship lines will be taken next week. —In the suit against the Aluminum Trust, the court has issued a decree enjoining the defendant combination from using certain methods. An agreement as to this was reached before the suit was begun. —An investigation as to the beef combination is to be made by the House Judiciary Committee. —The Humphrey bill was passed in the House last week, without opposition. Ships which are parties to unlawful agreements in restraint of trade are forbidden by it to enter or clear at ports of the United States.

Labor Controversies

A strike of the employees of the company operating the elevated and surface railways in Boston has checked traffic and been accompanied by violence.—Because of collisions between the police and Italian laborers on strike in Newark, N. J., where several officers have been severely injured and a high school student was unintentionally shot and killed, twenty-one of the strikers have been sent to the penitentiary for a year.—The strike of 400 employees of a manufacturing company near Middletown, Conn., who were organized as Industrial Workers of the World, has been marked by so much disorder that a troop of cavalry has been sent to guard the company's property and the employees remaining at work.—The waiters' strike in New York City is pronounced a failure by the landlords. There was dissension among the strikers. As a result of the movement, however, the pay will be increased and the hours bettered. Mrs. Rose Pastor Stokes, the Socialist, is seeking to form a union of chambermaids and other female employees of the hotels.

The Revolt in Cuba

There was no battle last week between the Government forces and the negro rebels, altho the latter continued to destroy property. They sacked and burned the town of Jara-hueca, not far from Santiago, and were guilty of many atrocities. Seizing a former official in his country house, they hanged him and assaulted his wife and daughters. A son was killed while trying to defend them. At President Gomez's request, Congress authorized a suspension of constitutional guarantees in Oriente, this having been recommended by General Monteagudo, who said that the severest measures were required. Martial law was proclaimed in Oriente. Gen. Mario Menocal's offer to furnish 3,000 armed men and to lead them was accepted. Congress appropriated \$1,000,000 for the suppression of the revolt. Estenoz, the negro commander, said that, rather than be governed by Cubans as they had been in the past, the negroes would prefer to be governed by stran-

gers. He had burned the iron company's property to let the world know he was conducting a revolution. He would make no agreement with Gomez, except in the presence of a representative of the United States, who must guarantee fulfillment of the contract. On the 5th, near Guantanamo, 570 marines were landed and sent to neighboring places as guards. On the same day four battleships were dispatched from Key West to the eastern end of the island, and preparations were made for the shipment of 5,000 troops from Newport News. At one a. m. on June 10 insurgents attacked a company of United States marines, commanded by Capt. Edward B. Manwaring, engaged in guarding El Cuero mines. The insurgents were repulsed without loss to the marines. On the same night insurgents burned standing sugar cane on the plantations of Hatillo.—On the 6th a warning was sent to Gomez by our Government. He was told that it was necessary for him to protect life and property, and that a continued failure to do this would "inevitably compel" our Government "to intervene under and in response to its treaty rights and obligations." At Gomez's request our Government forwarded to him 5,000 rifles, with ammunition, to be used by volunteers. Two days later he asked for 5,000 more. It was understood that he would have time to show what he could do, but some said not more than one week would be granted. Monteagudo said the rebellion could be suppress in three weeks. On the 8th there were alarming race riots in Havana. Many arrests were made and two or three negroes were killed. White mobs attacked the blacks. On account of the situation there, two warships were sent to Havana on the 9th, altho the riots were not renewed on that day. Señor Ferrara, Speaker of the House, came to Washington, where, it is said, he urged Mr. Taft to give Gomez more time.—In the Senate, on the 8th, Mr. Nelson, of Minnesota, asserted that revolts in both Cuba and Mexico were fomented and financed in the United States. The funds for rebellions in Cuba were furnished, he declared, by sugar interests. Annexation was desired because it would remove the duty on raw sugar. Annexation of Northern Mexico was sought by

mining interests. He introduced a long resolution, directing the Foreign Relations Committee to make a thoro inquiry as to the alleged action of the interests to which he had referred.

Mexico's Revolutionists At the beginning of the present week. General Huerta was moving northward slowly, rebuilding the bridges burned by Orozco. The latter was in the city of Chihuahua, which has lost one-third of its normal population. Of 1,000 foreign residents, only 106 remain. Orozco's men, having been paid with scrip, are restless and dissatisfied. The Chihuahua Legislature has authorized the negotiation of a loan of \$1,000,000 for Orozco's benefit, and agents have gone northward to borrow the money. Two or three members of Congress have been conferring with the rebel commander, but they represent, it is said, only a small group at the capital. He has formally authorized Zapata to attack the capital. Zapata has not done this, but in a battle last week, only forty-six miles from the capital, he overcame a small Federal force, killing seventy-five of the soldiers. At the end of the week there was news that Campa, one of Orozco's generals, who sought to cut Huerta's line of communication in the vicinity of Torreon, had been attacked and routed. This encouraged Huerta, who relies not only upon his own army but also upon two flank movements against Orozco, one from the northwest and the other from the southwest. In some way the rebels have procured a new supply of ammunition, but it is expected that Huerta will overcome and disperse them. At last reports he was about 100 miles south of Chihuahua. Gonzales Enrile, formerly financial agent of Orozco, but recently deposed by him, has been arrested in El Paso and is held for extradition, as the Mexican Government desires to prosecute him for embezzlement when he was a consul in Arizona, a year and a half ago. Our Government despairing of any settlement of claims against Mexico on account of the killing of several Americans in El Paso and Douglas, Ariz., during Madero's rebellion, the Senate Foreign Relations Committee has taken up the matter. It is expected that

the claims will be paid out of our treasury and that the money will eventually be collected from Mexico.

Central and South America There was some dismay at Nicaragua's capital when, in reply to the Nicaraguan Government's request for financial aid, the note of our Government was received, suggesting that there should be an inquiry as to \$33,000,000 paid to claimants after the recent revolution. It is said that in this note the names of the fortunate claimants were given. The foreign bondholders, at a meeting in London, have recommended a new plan for payment of the debt. It provides for the collection of revenue by an officer appointed or approved by our Government. A plot has been discovered for the delivery of the forts at the capital to the enemies of General Mena, Minister of War, who was made President in October last by Congress.—Frederick P. Shaw, of New York, an attorney who, as representative of the Chicago Title and Trust Company, went to Honduras to take possession of plantations owned by a bankrupt corporation, was assassinated there last week, presumably by squatters whom he had evicted.—The convention of the Radical party in Paraguay has nominated for the Presidency Don Eduardo Schaerer, a resident of German descent, who was one of the rebel leaders in the recent revolution.—President Pena, of Argentina, in a message to Congress, says that the area under cultivation in the country has increased by about 23 per cent. in five years. The value of the latest crops of wheat, corn, oats and linseed was nearly twice as great as that of the crops immediately preceding.—It is said to be known at Washington that the proposed discrimination in Panama Canal tolls, in favor of our coastwise trade, would be followed by retaliation in respect to the Welland Canal and other waterways.

Marine Disasters During the practice maneuvers of the French fleet in the Race of Alderney, on the night of June 7, the battleship "St. Louis" collided with the submarine "Vendemi-

aire," which suddenly appeared out of the darkness. The smaller craft was cut in two and sank, with its crew of 23. The "Vendemiaire," commanded by Lieutenant Prioul, was launched on July 7, 1910, was 167 feet in length, with a beam of 16 feet. She is the sixth craft of this type lost by the French navy. Submarines have been used for twenty-two years, and the total number of deaths has been 80, or almost 4 annually. M. Delcassé, Minister of Marine, visited the scene of the tragedy on June 9, and at the submarine station at Cherbourg eulogized the lost seamen. Addressing the submarine crews, "You run heavy risks," he said; "like your comrades the airmen."—When the British Board of Trade resumed its hearings last week, J. Bruce Ismay took the stand again, but most of his replies to questions were "I don't know" and "I can't remember." On June 4 he told the court of inquiry that it was planned to drive the "Titanic" at full speed during a few favorable hours of her maiden trip, and that he considered Captain Smith fully justified in going at top speed thru the ice regions, so long as he could see ice ahead. He attached no importance to the captain's action in handing him a warning message from the "Baltic" concerning the ice. Harold A. Sanderson, a director of the White Star Line, testified to the difficulty of manning efficiently a considerable number of lifeboats with able-bodied seamen and to the "unwillingness" of the crews, especially the firemen, to perform muster duty on voyages. Alexander Carlisle, director of the Belfast firm which constructed the "Titanic," testified on June 10 that there were not enough boats on board the ship. He stated this fact to the White Star Line, and had submitted plans providing for more boats, which were vetoed.—When Federal steamboat inspectors visited the power boats which were to have been used to carry sightseers from New York to the German warships in the Hudson River, they found twenty of them dangerous, carrying crumbling life preservers or being structurally unsafe.—The Alexander substitute for the Hitchcock bill, which recently passed the United States Senate, amending the wireless act of 1910 so as

to take advantage of some of the lessons of the "Titanic" tragedy, was passed by the House of Representatives on June 3. On June 4 the wireless conference opened at London, at the Institution of Electrical Engineers. This is an international meeting, and recommendations looking toward the uniformity of the law regarding wireless protection in various countries will probably be made.

Strikes and Political Crises In the House of Commons Mr. Lloyd George, British Chancellor of the Exchequer, stated on June 5 that the Transport Workers' Federation was willing to agree on a joint board of arbitrators, with monetary guarantees on both sides to ensure adherence to its decisions. This would be the first time the union had given employers any substantial guarantee. Pending developments, the Chancellor thought the men ought to resume work. So far there has been no evidence that the employers would accept the arrangement. They say the strike is collapsing.—A strike of marine engineers has paralyzed the coastal traffic of Norway, which is as important to the land of fjords as the railway system is to other countries.—On June 5 the Vasconcellos Cabinet resigned as the result of factional quarrels. Portugal is said to be "a seething volcano of political corruption, petty tyranny and monarchical conspiracy." Taxes and the cost of living have soared under the republican régime, and trade and commerce are said to be languishing. On May 29 the street car employees went on strike in the capital.—Fifteen thousand miners are on strike in the Asturias district of Spain. Rioting has occurred, and a general strike has been proclaimed at Almeria as a protest against the Government's failure to act upon the demands of railway employees. The general political situation in Spain is favorable to the Canalejas ministry, which received a vote of confidence in the Cortes on May 13 by a majority of 107—the second largest in the history of the present Parliament.—The crew of the French liner "France," 550 men, voted on June 10, together with 500 other seamen, to declare a general strike at Havre, where the "France" is now tied up, tho

she should by schedule be about to dock at New York. The crew of the new steamship demand an increase of \$6 per month for firemen, and \$4 per month for trimmers, seamen, etc. The strikers are all naval reservists.

Disorders in Belgium The elections in Belgium, which took place on Sunday, June 2, were for the most part orderly, but when the victory of the Clerical (Government) party, which has been in power for twenty-four years, was made known, rioting broke out. The campaign just ended was one of uncommon passion. An increase in the number of deputies from 166 to 186 offered hopes of overturning the government's majority of 6, instead of which the Clericals gained some ten new seats. The government project to place free denominational schools on an equality with the state schools, where no religious instruction is given, was vigorously opposed by both Liberals and Socialists, who formed a coalition against the Clerical majority, and demanded universal suffrage, compulsory free education, religious tolerance in the schools, old-age pensions, etc. The Catholic campaigners, on the other hand, attacked the lay schools, and published a cartoon representing these schools as receiving little children and turning out full-fledged toughs, or *apaches*. The city of Brussels brought suit for 100,000 francs against the newspaper which published this picture.—On June 6 it was reported that 100,000 men, including miners, millworkers, glassworkers and railway employees, were on strike in the Walloon Provinces, this being the form their protest takes. At Liège the riots were of a serious character, and several lives were lost; at other points strikers smashed railway signals, attempted to explode bombs, broke windows and wrecked the trains. Several cases of mutiny in the Civil Guard (corresponding to the American militia) occurred. Jesuit colleges, convents and church institutions have been attacked by mobs, and the constabulary obliged to charge mobs with broadswords. Reservists were called to the colors. Newspapers have reported a growing sentiment among the working classes of the south-east in favor of the annexation of their

provinces to France. The success of the Clericals is due to the system of plural voting, which has been in effect since 1892, when the constitution was revised and the franchise extended. The new Chamber will contain 101 Clericals, 44 Liberals, 39 Socialists and 2 Democrats. The Liberal leader, Paul Hymans, calls upon his followers to abstain from violence, continuing the fight within constitutional limits. The Socialist Labor party has called a general congress, to sit on June 30, to discuss measures to compel a revision of the constitution.

Hungary, Albania, and Turkey A dynamite cartridge was exploded in the House of Parliament at Budapest, May 28. No damage beyond window breaking was done. The deadlock in the Hungarian Diet was broken on June 4, when Count Tisza, the new President, carried the government defense bills thru all their readings at the one session. Budapest is still occupied by troops, and the sittings of the Diet are a pandemonium of horn blowing, whistling, etc. Seventy-five deputies were thrown out of the chamber in one day. On June 7, moreover, Count Tisza had a narrow escape from assassination in the Diet, where he was fired upon three times (without effect) by a member of the opposition, Julius Kovacs, who then shot himself, probably with mortal effect. The attack upon the President of the Chamber is an outcome of the agitation persisted in since his election to that office on May 22—agitation based upon his hostility to universal suffrage.—Lawlessness in Prishtina and Vuchitrn has been reported from Albania, and there have been rumors of an imminent revolt against Turkish rule. Stern military measures were taken to suppress the disturbances on their occurrence. The Albanians demand the removal of the Mutessarifs and commanding officers at Ipek and Djakova, and the appointment of officers and officials acceptable to the population; also the abandonment of the Young Turk scheme for creating schools with Turkish as the language of instruction, the adoption of Albanian as the official language, the delimitation of the Albanian boundaries, the recognition of an Albanian flag,

and a guarantee of these reforms by the Powers. The Albanians threaten not to pay taxes to Turkey hereafter, or to serve in the Turkish army.—Turkey has secured the assent of the British Government to the employment of five British officers as members of the directorate of the *gendarmerie*, newly organized in her European provinces.—On June 3 it was reported that a mutiny had broken out in the Turkish navy, a part of which, stung by newspaper reproaches of inactivity, demanded that the government issue orders for the war vessels to

fight. When the government refused the crews mutinied.—The Italians have occupied the island of Psara in the Ægean. Tho under Turkish sovereignty the island is inhabited by Greeks. The Turks are said to have lost 1,000 killed in a battle at the Zanzur oasis in Tripoli on June 8. The Italian loss is reported by the commander, General Caneva, as 11 killed, 260 wounded. General Caneva adds that his forces are in complete control of the coast, and that no more important engagements are to be looked for during the hot season.

The New City

BY MARGUERITE O. B. WILKINSON

HAVE we seen her, The New City, O my brothers, where she stands,
The superb, supreme creation of unnumbered human hands;
The complete and sweet expression of unnumbered human souls,
Bound by love to work together while their love their work controls;
Built by brothers for their brothers, kept by sisters for their mates,
Garlanded by happy children playing free within the gates,
Brooded by such mighty mothers as are born to lift us up
Till we drink in full communion of God's wondrous "loving cup"?
Clean and sightly are her pavements ringing sound beneath men's feet,
Wide and ample are her forums where her citizens may meet,
Fair and precious are her gardens where her youths and maidens dance
In the fresh, pure air of Heaven, 'mid the flowers' extravagance.
And her schools are as the ladders to the Spirit, from the Clay,
Leading, round by round, to labor, strengthened side by side, by play,
And her teachers are her bravest, and her governors her best,
For she loves the little children she has nourished at her breast.
Never clangor of the trumpet, nor the hiss of bullets mad
Breaks the music of her fountains, plashing seaward, flashing glad,
For no excess and no squalor mark her fruitful, fair increase—
She has wrought life's final glory in a miracle of peace.
And her citizens live justly, without gluttony or need,
And he strives to serve the city who has bread enough to feed
All his own, and she must labor, who would hold an honored place
With the women of the city in their dignity and grace.
Have ye seen her, O my brothers, The New City, where each hour
Is a poet's revelation, or a hero's perfect power,
Or an artist's new creation, or a laborer's new strength,
Where a world of aspiration clings God by the feet, at length?
Have ye seen her, The New City, in her glory? Ah, not yet
Gilds the sun with actual splendor chimney top and minaret,
But her site is surely purchased and her pattern is designed,
And her blessed ways are visions for all striving humankind!
The New City, O my brothers, we ourselves shall never see—
She will gladden children's children into holy ecstasy—
Let our lives be in the building! We shall lay us in the sod,
Happier, if our human travail builds their avenues to God!

The Atomic Theory of Electricity

BY R. A. MILLIKAN

[We have already called the attention of our readers (THE INDEPENDENT, April 27, 1912) to the ingenious apparatus by which Professor Millikan, of the University of Chicago, has been able to give a visible demonstration at the same time of both the kinetic theory of gases and the atomic theory of electricity. That all matter is composed of atoms which in gaseous form are flying about in all directions has for the last fifty years been generally accepted by physicists on theoretical evidence alone, but the theory that electricity also is composed of distinct and indivisible particles has only come to the front in the present century. In the following article, prepared from a popular lecture recently given in Chicago, Professor Millikan explains his experiments and their significance. His alma mater, Oberlin College, conferred upon him an honorary doctorate at the last commencement for these discoveries.—EDITOR.]

IF you ask me to tell you what "electricity" is, I should answer by asking you first to tell me what matter is, and if you responded that matter is that out of which this world and the planets and the stars of the universe are made; that it is something which exists in the form of about 100 different units or atoms of relative weights between 1 and 240, which atoms unite together in

different ways to form molecules; that the average diameter of one of these molecules is two hundred-millionths of a centimeter, then I should answer: "Very well, if you are content with that sort of a definition of matter, I will define electricity for you in a similar way and say: Electricity is something which is still more fundamental than your atoms of matter, since it is a constituent of every

APPARATUS USED BY PROFESSOR MILLIKAN IN THE UNIVERSITY OF CHICAGO TO DEMONSTRATE THE ATOMIC THEORY OF ELECTRICITY AND THE KINETIC THEORY OF GASES

one of these hundred different types of atoms which you have been describing. It is something, too, which like matter, is built up out of definite units, but it is unlike matter in that all these units are exactly alike, so far as we are able to determine, save, however, that a marked difference is found between the positive and negative units, for while the two possess the same charge, the inertia or mass which, so far as we now know, is inseparably associated with a positive unit is that of a hydrogen atom, while that inseparably associated with the negative unit is $1/1700$ as much. The negative units, furthermore, or electrons, are so small in volume and are separated from one another within the atom by so large spaces, that one of them can shoot thru hundreds and thousands of atoms without hitting anything or doing anything whatever to these atoms. Its diameter is about one one-hundred-thousandth of that of the atom. It is the smallest thing we know anything about—probably the smallest thing in existence. Such an enumeration of properties is probably as near to a definition of electricity as we shall ever be able to come. For, since electricity is the most fundamental thing thus far known to us, it is obviously incapable of definition in terms of anything more fundamental. Its elementary unit, according to the best determination which we have yet been able to make, is 4.82×10^{-10} so-called electro-static units, a quantity so small that the electrical charge produced by a single stroke of a cat's back contains billions of them, while the number which courses each second thru the filament of a common 16 candle power incandescent lamp is about three billion billion. The electron is thought by many reputable scientists of the present day to be the primordial thing out of which all matter is built up, so that, from this point of view, the different atoms of ordinary matter are merely different groupings of the fundamental electrical units.

The experiments herein considered are by no means the only ones upon which either the kinetic theory of matter or the atomic theory of electricity rest. They may perhaps be said, however, to constitute the most direct and most

easily intelligible evidence which has yet been found, and when taken in connection with preceding evidence, to place both of these theories in such an impregnable position that there is about as much likelihood that men will some day cease to believe that the earth is a nearly spherical ball which rotates once a day upon its axis and swings once a year about the sun as that either the kinetic theory of matter or the atomic theory of electricity will ever cease to be the foundation stones of all physical science.

Imagine two circular plates, M and N, Fig. 1, about 10 inches in diameter and $\frac{3}{4}$ inch apart, which can be electrically charged, one positively and the other negatively, by making them the terminals of a ten thousand volt storage battery B. Suppose also that with the aid of a switch S, the plates can be instantly discharged when desired, so as to possess no electrical properties at all. Now, when the plates are suddenly charged the air between them is found to remain perfectly quiet and free from convection currents of any kind, a result which

shows that practically all of the air molecules between the plates are electrically mutual. But if now a beam of X rays is allowed to play upon the air between these two plates, it is found that some of these neutral air molecules are split up by the X rays into electrically charged parts, which fly instantly, one part to plate M and the other part to plate N. This shows conclusively that the ordinary neutral molecules of the air possess electrical constituents, that is,

that they contain equal quantities of positive and negative electricity. Both ultra violet light and the rays from radium possess, like the X rays, the power of thus *ionizing* a gas, and even when no external ionizing agent whatever is at hand, it is found that out of the 27 billion billion molecules which are present in each cubic centimeter of ordinary air, from two to twenty split up per second into ions. As will presently be shown, this process of ionization consists in the detaching from a neutral molecule of an exceedingly minute fraction of its constituent negative electricity—an electron—so that the residue of the molecule is probably just like one of the neutral molecules of the surrounding gas, save that it now carries a free or unbalanced positive charge, corresponding to the negative charge of the electron which it has lost. The escaped electron probably soon attaches itself to a neutral molecule, so that shortly after the decomposition of a molecule, the gas is in the same condition as it was before the decomposition, save that two of its previously neutral molecules are now electrically charged, one positively and the other negatively. Whether this molecular decomposition, which goes on continually in ordinary air, is due to rays from traces of radio-active substances which are present at all times in the air, or whether it is due to an occasional spontaneous explosion of a molecule, we cannot as yet be absolutely certain, tho the evidence is at present strongly in favor of the former hypothesis. But, however they may be formed, there can be no doubt of the presence of these electrically charged molecules or "ions" in the atmosphere at all times, to the extent of from 1 to 15 per cubic millimeter, nor can there be any doubt that it is these atmospheric ions which are responsible for all the manifestations of atmospheric electricity which have been the object of man's awe and worship throughout all ages.

Now, the problem which was set for this investigation was to catch individual ones of these atmospheric ions and to find what sort of charges they possess. A detective which could be set on the trail of a thing so small had evidently to be a distinctly undersized member of the

force. It was in fact an oil drop so minute as to be little more than visible thru the most powerful microscope. In these experiments, however, no such high-power microscope was needed, for in a sufficiently powerful beam of light the oil droplet could be made to appear as a bright dot even to the naked eye in spite of its minuteness. The method of setting it at work was this: A spray of oil was blown from an ordinary commercial atomizer A, into a dust-free chamber C, and one or more of the oil droplets was allowed to fall thru a pin-hole at *p* into the space between M and N. As it floated there, slowly falling under gravity, it was illuminated by a powerful beam from an arc light, which passed thru diametrically opposite windows in the encircling ebonite strip *c*. It was viewed thru a third window placed on the emergent side of the beam about 15 degrees from its direction. A glance at the accompanying half-tone, which shows a modification of the device, used for work at low pressures, will make clear the arrangement of the different parts of the apparatus in the experiment now under consideration. The appearance of this drop of oil in the observer's short focus telescope thru which it was viewed was that of a brilliant star on a black background. Before this star reached the lower plate the electrical field was thrown on and it straightway began to rise again toward the plate M. This was because, in the atomizing process, the droplet in general received a frictional charge; for, as is well known, strong frictional processes always produce electrification. When the drop had been pulled up close to M the plates were discharged and the drop allowed to fall under gravity again until it was close to N. In this way, by alternately throwing on and off the electrical field, the oil-drop detective was kept pacing its beat up and down between the plates in the hope that it would catch and hold some unwary ion which came within its reach. The first time the experiment was tried an ion was caught within a minute, and the fact of the capture had been signaled to the observer by the change in the speed with which the drop moved up when the electrical field was on; for since the ion carried an

electrical charge, its advent upon the drop changed the charge on the latter, and therefore changed the speed with which it was pulled up toward M. If the sign of M was positive, then the drop itself, in order to be pulled up by the field, must have had a negative charge, and in that case the capture of a positive ion reduced this negative charge and therefore reduced the speed in the field, while the capture of a negative ion increased the negative charge and hence increased the speed in the field. From the sign, then, and the magnitude of this change in speed, taken in connection with the constant speed under gravity, the sign and the exact value of the charge carried by the captured ion could be easily determined. A drop would often be kept traveling back and forth in the manner described for four or five hours at a time, in the course of which it would change its charge twenty or thirty times because of the capture of ions, and the value of each of these different charges would be determined from the strength of the battery used to charge the plates and the two speeds just mentioned, that is, the speed under gravity and the speed under the influence of the electrical field.

Now, if electricity is atomic in structure—that is, if it is built up out of discrete elements, all of which are exactly alike—then all electrical charges ought to be exact multiples of something, and this is precisely what every electrical charge which we have been able to study has been found to be. Furthermore, that something turns out to be the smallest charge which the oil drop ever adds to itself when it changes its charge because of the capture of an ion or ions. In other words, *the charge carried by an ion is itself the elementary unit out of which all electrical charges which we have been able to study are built up.* No more exact or more consistent multiple relationship is found in the data which chemists have amassed upon the combining powers of the elements and upon which the atomic theory of matter rests, than is shown by these series of charges which the oil drops take on. Nearly a thousand different drops have been examined in the manner indicated, some of them being of oil, a

non-conductor; some of glycerine, a semi-conductor; some of mercury, a good conductor, and some of other substances; and in every case, without a single exception, the initial charge placed upon the drop by the frictional process, and all of the dozen or more charges which have resulted from the capture by the drop of a larger or smaller number of ions, have been found to be exact multiples of the smallest charge caught from the air. Some of these drops have started with no charge at all, and one, two, three, four, five and six elementary charges or electrons have been picked up. Others have started with seven or eight units, others with twenty, others with fifty, others with a hundred, others with a hundred and fifty elementary units, and have picked up in each case half a dozen elementary charges on either side of the starting point, so that in all, oil drops containing every possible number of free electrons between one and one hundred and fifty have been observed, and the number of electrons which each drop carried has been accurately counted. Since it has been definitely proved that an electrical current is nothing but the motion of an electrical charge over or thru a conductor, it is evident that the experiments under consideration furnish not only the most direct and convincing of evidence that all electrical charges are built up out of these very units, or electrons, which we have been dealing with as individuals in these experiments, but that all electrical currents consist merely in the transport of these electrons thru the conducting bodies.

The next important question which the above method of experimenting seemed calculated to throw additional light upon was, What does the act of ionization of a gas molecule consist in? Since it is now practically certain that a molecule of air, that is, a molecule of nitrogen or oxygen, contains at least 100 electrons and possibly very many more, the act of ionization might consist in the knocking out from a neutral molecule of several or many electrons, or in the complete shattering of an atom, or it might consist merely in the detaching of one single electron, thus leaving the molecule essentially the same sort of a thing

which it was before the ionization took place, save for its newly acquired positive charge. In order to settle this point, it was necessary to catch the positive residues of the molecule at the very instant of their formation, instead of some seconds after they had been formed, as we had done in the preceding experiments. Accordingly, the method was modified as follows: By suitably adjusting the strength of the battery applied to the plates M and N, it was found possible to hold a minute positively charged drop suspended like Mohammed's coffin, as long as desired, between heaven and earth, that is, in this case, between M and N, the downward pull of gravity being exactly neutralized by the upward pull of the field. Having obtained the drop in this position, there was produced beneath it a sheet of X ray ionization, so that when the X ray bulb was excited the drop was in a veritable shower of the charged positive residue of the molecule broken up by the X rays. Now, if two or more negative electrons were knocked out of a molecule at once, the residue of the molecule would possess a corresponding number of elementary positive charges, and if this residue were caught by the oil drop, the latter should be seen to jump forward at the instant of capture, because of the destruction of the equilibrium between gravity and the electrical field; and furthermore, from the speed which it assumed, as measured by the time which it took to move over a given number of divisions in the scale of the eyepiece of the observing telescope, the size of the charge of the captured ions could be determined. The experiment was found to be as interesting and exciting as trout fishing; the stars under observation would stand perfectly still for five, ten, fifteen or even sixty seconds, and then suddenly start forward with a speed which was big or little, according to the size of the catch and the size of the drop. When we were using large drops it was found that two or three adjacent molecules were in occasional instances ionized at once, and therefore two or three separate ions were thrown simultaneously upon the drop, but when the drops were very small we observed in the course of three months about 500 different catches,

without finding a single one which corresponded with certainty to the advent of an ion carrying more than one free electron, and not more than three or four out of the 500 which were in any way uncertain. This seems to prove that *the act of ionization by all the types of X ray and gamma and beta rays of radium which we have been able to try consists in the detachment from a neutral molecule of one single electron.*

Turning next to the kinetic theory of matter, what have the present experiments to do with it? There are three different ways in which they bring to it powerful support. When these experiments were begun it was anticipated that positively charged ions would be caught by negatively charged oil drops, and negatively charged ions by positively charged oil drops, but it had not been predicted that positively charged drops would catch positive ions and negatively charged drops negative ions; for since electrical charges of like sign always repel each other, it might be thought that positive drops would push away positive ions and negative drops negative ions. As a matter of fact, however, positive ions were found to be caught by positive drops about as readily as the negative ions and *vice versa*. The explanation from the standpoint of the kinetic theory is very simple. It will be remembered that according to that theory the molecules of all substances in the gaseous state are darting hither and thither with the speed of a rifle bullet, ricocheting unceasingly against one another and the walls of the containing vessel, and producing by this bombardment all the familiar phenomena of pneumatic tires and of gaseous bodies generally. Now, if a positive ion is nothing but a molecule which has lost an electron, it must be endowed with just such motions as are the molecules themselves. Indeed, one of the fundamental assumptions of the kinetic theory, and it is an assumption which will, a little farther on, be proved to be correct—is that the average kinetic energy of agitation of a molecule is independent of its size, or its shape, or its charge, or indeed of everything except temperature. A positive oil drop catches positive ions, then, simply because the latter are shooting

about hither and thither with such speeds that when they chance to shoot toward it, they push themselves up into it in spite of the repulsion which the drop exerts upon them. In order to test the correctness of this explanation we put stronger and stronger charges upon the drop and found in fact that the frequency with which it caught positive ions was thereby diminished. Indeed, we succeeded in charging one drop so strongly with positive electricity that altho when it was more weakly charged, positive ions were jumping into it every few seconds, now, *in the course of four hours and a half just one positive ion succeeded in attaching itself to the drop.* From a knowledge of the size of this drop and the size of the charge upon it, we could easily compute the kinetic energy which the ion had to have in order to just enable it to force itself up to the surface of the drop, and this kinetic energy actually came out within a few per cent. of the value required by the kinetic theory. Here, then, was a direct determination of the energy of agitation of a gas molecule.

But even this evidence is not sufficiently direct to convince a skeptic untrained to follow the computation, simple tho it be. Hence a proof was sought which involved no knowledge whatever of either mathematical or physical theory. Fortunately, the trail had already been blazed and nothing had to be done but to clear out some of the remaining underbrush which obscured it. It had been discovered as early as 1827 by an English botanist named Brown that microscopic solid particles, suspended in a liquid, keep up incessantly a very minute trembling motion, and this phenomenon remained altogether unexplained for more than half a century. At last, in 1888, it was suggested by Gouy, in France, that this was probably due to the fact that when a particle is sufficiently small the molecular bombardment which it receives from the molecules which surround it is not exactly the same on opposite sides, and in consequence the particle is pushed first in one direction and then in another by these unbalanced molecular forces. In 1908 Perrin, in Paris, with the aid of a formula deduced by Einstein, of Berne, had brought

forward quite convincing evidence that this explanation was correct, but his observations had all been made upon minute particles suspended in liquids, and liquids are very much less suited to any convincing and accurate test of the kinetic hypothesis than are gases. Apparently the very great advantages of observing minute suspended particles in a gas at *very low pressures* where the motions ought to be enormously increased had not been appreciated, or, at least, had not been utilized, perhaps because the means had not before been at hand for keeping such particles in suspension. Accordingly, the plates M and N, shown in the line cut, with the atomizer attached, were placed inside a large brass cylinder, which could be sealed air tight and exhausted if desired. This apparatus is shown in the photograph. When the air was at atmospheric pressure, the smallest particles produced by the aspirator showed clearly the incessant wiggling motions, which are called, after their discoverer in liquids, the "Brownian movements." But, when the pressure was reduced to seven or eight millimeters of mercury (about $1/100$ of an atmosphere), these motions had increased so enormously in violence that it was difficult to follow the smallest particles as they dashed hither and thither like wigglers in a water barrel. The reason that reducing the pressure brings out the motion so much more clearly is obviously this: When the oil drop is surrounded by a dense swarm of bombarding molecules, it is like a football in a melee of densely packed players who are kicking it on all sides at once, but are unable to send it any appreciable distances. But when it gets out into the open, where the players are scarce, it begins its spectacular flights. Precisely so with the oil drops, and no football game was ever more spectacular or more fascinating than the behavior of one of these oil drops at low pressures. The fact that the motions increase in violence the rarer the gas becomes and the smaller the particles are taken (size being indicated by the speed with which a given particle settles under gravity), is obviously just what ought to happen. There cannot, then, be the slightest doubt that what these oil drops are do-

ing, namely, darting about violently in all sorts of directions, is precisely what the molecules themselves are doing in a much more excited way, for it would be absurd to suppose that the increased speed and the increased distance of the motions as size and mass diminish do not go on after the particles cease to be visible and shrink to molecular dimensions. From the standpoint of a molecule which is darting hither and thither with the speed of a rifle bullet, our dancing oil drops must look like snails crawling about with languorous slowness. But to us they have served their purpose, for they have enabled our minds to see the invisible molecular world doing in a large way just exactly what the oil drops are doing in their small way. They have proved the kinetic theory of matter even to the man on the streets.

In conclusion, it may be pointed out, that not only has it now become possible to prove the correctness of the kinetic theory of matter and the atomic theory of electricity, but that thru the results of experiments like the above on the elementary electrical charge we are now able to determine the exact weight of every atom of every molecule of every known kind of matter, the exact number of molecules in any weight of any substance, the exact value of the kinetic energy of agitation of a molecule, the mean diameter of any kind of molecule, and quite a series of other important physical magnitudes. The first three of these quantities can be found with precisely the same degree of accuracy attained in the measurement of the elementary electrical charge, and this is an accuracy of about *one part in a thousand*. Not that I am ready to assert that the value which is given above possesses that degree of certainty; but rather that we now have a method which is capable of yielding such precision and the rest is

merely a matter of time and of careful work. We are at present engaged not only in checking this value under new sets of conditions, but of redetermining all of the quantities which enter into it. Assuming it as the basis of our computation, there are in a cubic centimeter of gas under normal conditions $2,684 \times 10^{-9}$ molecules, and the weight of a hydrogen atom is $1,678 \times 10^{-24}$ grams. These numbers can be made more significant to the ordinary reader with the aid of an illustration. If a million men could be set counting as fast as they could, say at the rate of 200 a minute, they could count out the number of molecules in a cubic centimeter in just 252,000 years, if none of them ever stopped to eat, sleep or die.

"But," says some one, "what of it, anyway? Does the triumph or the defeat of the kinetic theory of matter or of the atomic theory of electricity, have anything to do with the *practical* problems of the modern world? Is anybody going to be better fed or better clothed because of it?" The answer is this. Within the past seventy-five years—the merest drop in the bucket of recorded time—the conditions of human life on this earth have been completely revolutionized and that solely because, for the first time in history, man has become interested in considerable numbers, rather than as heretofore, in isolated instances, in patiently and persistently seeking merely to uncover Nature's "useless" secrets, and then when the inner workings have been laid bare he has in many cases seen a way to put his brain inside the machine and drive it where he would. Every increase, then, in man's knowledge of the way in which Nature works must in the long run increase by just so much man's ability to control Nature and to turn her hidden forces to his own account.

CHICAGO, ILL.

The New Irrepressible Conflict

BY DELOS F. WILCOX, Ph.D.

[Dr. Wilcox is the franchise expert of the Public Service Commission of New York City and is the author of many books on city government.—EDITOR.]

WITH almost startling suddenness the democratization of the forms of government has flamed up into a great national issue in America. People are still interested in the tariff, the currency, the trusts, and conservation, but for the time being these issues are overshadowed by the initiative, the referendum, the recall and direct primaries. The radical leaders of all parties are coming to a consensus of opinion that the first thing for the progressives to do is to pool their energies for a persistent "drive" to capture for the people the tools of democracy.

That is what ails the Republican party and in a less spectacular way the Democratic party. They are both misfits at the present time. Within each of them there is a division more fundamental than the division between them. It is a new irrepressible conflict that lies between two theories of government, or, to speak more accurately, between two *interests in government*. The unpleasant personalities that have marked the Presidential campaign this year must not be confounded with the real issues at stake. Mr. Roosevelt is a hard hitter with a strong personality, but aside from a few mannerisms in his style which give a handle for criticism, the "personalities" of the campaign have their origin in the furious denunciations by the reactionary press and the reactionary political leaders who are "scared out of their boots" by the strength and significance of the progressive movement, and who know that their only hope of heading it off is in reviling its leaders and diverting popular attention from the fundamental issues to their personal foibles. Mr. Roosevelt is regarded as the most dangerous of all leaders, because in addition to his immense personal prestige with the people he is a progressive who knows that the only way to progress is to go forward

from where we are. He knows that mere talk is vain and that the people can never free themselves from the domination of the corrupt alliance between big business and bad politics except by the use of the political instruments they now have and such new instruments as they can secure by means of those they now have. While others sigh over the sad state of their country, Mr. Roosevelt goes out to get delegates to capture a party, the only instrument other than revolution by which the sad state of the country can be relieved.

Even after all the discussions and revelations of this last strenuous decade, it is only a comparatively few of the leaders of thought who have "seen the cat." Of course, those to whom "the cat" is an emblem of happy domesticity, a symbol of present prosperity and power, may be supposed to be more or less familiar with its lineaments. But for others knowledge is dangerous, for "the cat" is never seen by an unfriendly eye without knowing that it is seen. Mr. Roosevelt has seen and has been caught seeing. He has been under suspicion for some time, but now the owners of "the cat" "have the goods on him." The *New York Times* is one of the great journals of the country that represent these owners. Two years ago, when it was first whispered that Mr. Roosevelt was becoming more radical, that he might even openly espouse the initiative and the referendum, the *Times* published a warning editorial. It said that radicals had come out of the West before now, and would come again. Mr. Bryan and Mr. La Follette and their ilk in both parties might shoot up like rockets against the Western sky, and even give our people little shivers of alarm at times. But after all, we could handle *them*. Their fireworks might be lurid and disconcerting, but they were not a serious menace to this great coun-

try of ours. But Colonel Roosevelt—keep your eye on him! If he should turn radical and assume the leadership of the people, then war and pestilence would indeed be abroad in the land. The fundamental nature of the issues now at stake is seen in the smug coöperation of the *Times*, patron saint of respectability and old style civic virtue, with William Barnes, Jr., past master of bipartisan alliances, to flout respectability and civic reform in the government of the State of New York. Soon after the Republican standpatters suffered their recent reverses at the primaries in Illinois and Pennsylvania, the *Times* addressed some pregnant editorial counsels to Mr. Taft's campaign managers. "The reverses suffered in these States stand as evidence of inefficient campaigning. Mark Hanna, Zachariah Chandler, and Arthur P. Gorman were not distinguished as moralists, *but at least they knew how to take care of States.*" [My italics.] We say these things, not in reproof or in unreasonable criticism of Mr. Taft's managers, but to arouse and encourage them to put heart and vim into their work. To them is entrusted the defense of their party and of the country against a dangerous assault," said the *Times*. Mr. Barnes has patriotically laid aside his personal feelings and has stepped forward to "put heart and vim" into the fight against the principles for which Mr. Roosevelt stands. Both Mr. Barnes and the *Times* have a personal admiration for Mr. Roosevelt, and their present fervor in fighting him goes far to show that the campaign is concerned with momentous issues and that Mr. Roosevelt's personality is important only on account of his strength to help the other side. Mr. Barnes reads Mr. Roosevelt out of the Republican party. Mr. Cannon—Mr. Joseph G. Cannon—formerly a leading figure in standpat circles, did a similar service for the Western insurgents two or three years ago. Mr. Barnes and Mr. Cannon see clearly enough that standpatters and progressives do not belong in the same party. The talk of compromise originates with people whose political philosophy harks back to the days when political parties could be mere organized hordes of office-seekers and power-mon-

gers, and still live. That day is past. The ancient oligarchy of privilege, entrenched in the strategic positions of commerce and industry and habituated to the use of government and political parties for its own ends, suddenly finds the people snatching at its weapons. Mr. Barnes is well acquainted with the advantages of bipartisan loyalties to the compact interests which regard "Republican" and "Democratic" as mere interchangeable pet names for government that serves them. But to the people who look upon government as a public function, bipartisanship is merely a source of division and helplessness. They are tired of it. They wish to play a new game. They demand a *progressive party*. They do not care about names. They would be willing to be Democrats if there was any use in it. But experience and reflection do not justify the hope that the Democratic party can be transformed into a steady, constructive instrument of progressive government. This party suffers from a weak back. Its preponderance depends upon the solid South, where to be a Democrat means nothing in times of national issues. As long as race fear and race hatred in the block of States that furnish the solid central phalanx of the Democratic membership in the National Legislature make the party in that section of the country primarily a white man's party, it is hard to see how the Democratic party can be of much use as a dominant organization in national politics. *The Progressives must either capture the Republican party or else organize a new one.* The issue is being decided now, and for that reason no citizen having the welfare of his country at heart should let himself be fooled into disgust by the personalities on the surface. A great old party—not to say a grand old party—cannot be transformed or a new party of power organized without discomforts and bitterness. It is no time now to exclaim: "A plague on both your houses!" For, whether we will or no, we belong to one or the other of them. There are things to be done in this country. Talk precedes action. A realignment of parties is inevitable, in order that the progressive movement may not *end* in talk.

The Pleasing Professor

BY LESLIE DAVIS

"VACATION begins next week and we haven't decided where to go," I reminded Mary. "We must make some plans."

My wife's face shadowed. "It seems to me, Austin, that we really ought to spend a little time with the Newmans."

"The Newmans? Of all people on earth why choose them? I despise Henry Newman. He's the meanest, stingiest, most contemptible pattern of a man—"

Mary interrupted. "I know all that, Austin, but Ellen Newman is my own cousin and I think everything of her. She has invited us up there time and again and I know she thinks it queer that we never come and I'm afraid she is beginning to feel hurt. I thought that if you *could* endure him, just for a day or two, and make them think you liked him it would be perfectly lovely for Ellen and me and the country air would be splendid for Gertrude."

I always hate to disappoint Mary. The thought of a visit to a New Hampshire farm with Henry Newman as host was an appalling one, but a look at Mary's wistful face decided the matter.

"I'll go," I agreed with affected cheerfulness; "I shall never like Henry, but I can make him like me and that is all that is really necessary."

"He is very fond of fishing, perhaps you could go off together on a little jaunt. And he adores checkers; you play checkers very well, Austin," she went on, hopefully.

"Oh, we'll get along, never fear," I assured her and started down town to price fishing rods.

The next day Mary came to me wearing a rather anxious expression.

"I've been thinking, Austin," she began, "that Ellen's sister, Sophie Seavey, lives on the farm right next to the Newmans. She will think it very queer if we don't stop there too."

"Merciful heavens, Mary! What next? I have nothing against the Seaveys, but we have never enjoyed each other in the least."

"That is just why I want you to go, to change all that. They think that because you are a professor of Greek in a big university you are necessarily solemn and that makes them solemn too. I was thinking that we could go there for a day or two and that you could joke and be funny."

"By all means, let us go," I assented. "I will be funny. And while we are in New Hampshire perhaps you would like to include the Harbecks in our program." The Harbecks are cousins of Mary on her mother's side. They have a big country place, constant house parties and are devotees of sport. We had often been invited there, but had postponed going because neither Mary nor I rode to hounds.

Mary clapped her hands. "A splendid idea!" she cried. "It will be a triumphal tour. We will go from place to place making friends and leaving a pleasant impression."

"I shall be all things to all men," I declared. "They will find that a professor of Greek can be excellent company. You will be surprised, Mary, to see how adaptable I shall be."

So Mary wrote to the three families and suggested our coming and received most cordial replies. Accordingly, the next week we set out, I carrying our bags and the new fishing rod, Mary following with wraps, and Gertrude, aged seven, bringing up the rear with a bow and arrow which we had bought from a man in the street before starting.

The Newmans welcomed us warmly. We chatted during the evening and made plans for the next day. Henry and I were to go fishing in the morning, walk over the place in the afternoon, and for the evening a checker match was agreed upon. In the meanwhile our wives could "visit" together and the following day we were to leave.

When we had gone to our room, however, Mary turned to me with a whisper. "Ellen has something on her mind. Didn't you notice how worried she

looked? Now I wonder what is bothering her."

We were not left long in ignorance. The Newmans occupied the room next to ours and the walls were thin. After a little we heard their voices in a low murmur, then as their interest grew the tones rose and their words were plainly audible.

"Do let me, Henry," Ellen seemed to be pleading. "Two hens would be plenty for a fine pot-pie and we would never miss them."

"I'm not going to kill two hens. Ham and eggs will make a good enough dinner for anybody."

"They can have ham and eggs any time and every one expects a chicken dinner in the country. We can't afford to buy much for them, but we have lots of chickens. Only two hens, Henry!"

"I won't have it, I tell you, and that settles it."

Apparently it did. Mary turned to me in dismay. "That horrid man," she breathed, "to worry Ellen so! But we must never let her know we heard and you must pretend to like him, Austin!"

In the morning we rose early to prepare for the fishing trip. I have never cared for fishing, but I patiently dug worms and, for practice, managed to adjust one on a hook at the end of my line. That accomplished, I rested the rod against the side of the house and joined the others at breakfast.

We were hardly seated before a terrific squawking fell on our ears. With one accord we rushed outside. On the end of my fish line hung a frantic hen! Tempted by the worm, she had swallowed the hook!

"She will have to be killed," declared Mrs. Newman with an odd gleam in her eye, and her husband dejectedly bore the unhappy hen away.

We finished our breakfast rather silently, that is, all but Gertrude. She was a restless child anyway and was anxious to get out and try her bow and arrow. I was helping Henry get some tackle together when I heard a cry and more squawking. Gertrude, unpracticed in her aim, had let fly an arrow into the flock of poultry and had hit a large fat hen in the head. We gathered around it in incredulous surprise. It was quite dead. Henry

picked it up and sullenly carried it away.

When Newman returned we started off. Conversation dragged a little. However, when we were once in the boat and under way Henry's face began to draw up. My spirits rose accordingly. Now was the time to win him.

Suddenly Henry whispered, "Ha! I've got a bite!"

"Good work!" I responded cordially; then I added flatteringly, "I cannot let you beat me like that," and stood up airily to fling out my line.

I shall never understand how it happened, but the cord, instead of flying forward, flew backward. An agonized cry made me turn. Newman was hopping up and down like a madman. My fish hook was caught in his thumb!

I started toward him. "Don't touch me!" he yelled. "You donkey! You jackass! You—" Words seemed to fail him, but he waved me off and began to pull on the hook. Finally, however, he was obliged to allow me to assist him with a pocket knife. I bound the injured member with a clean handkerchief, but it bled profusely and seemed to be very painful.

I saw that the trip would have to be abandoned. Henry agreed gloomily and sat hunched in the end of the boat while I rowed home. Ellen and Mary had just begun their "visiting," but Ellen went dutifully off with her husband to wash his hand and tie it up. I saw nothing more of him until dinner time when Ellen proudly served a big platter of delicious chicken pot-pie. Henry's portion had to be cut up for him. He did not speak during the meal.

Henry went to lie down and I walked over the place alone. After supper his thumb hurt him too much to play checkers.

In the morning we said goodby, a little strainedly. Henry found his thumb too painful to permit him to shake hands with me.

The short journey to the Seaveys' pleasant farm was made in an omnibus. The presence of other passengers forbade any discussion of our last visit, but as we alighted Mary managed to whisper, "Here we are. Now, Austin, don't be solemn!"

"Trust me!" I assured her, and sprang

jocularly down to greet the Seaveys. They were lined up wearing rather subdued expressions which changed to surprise when I rushed forward and jovially slapped Sam on the back. I tossed the children high in the air. I ran around admiring the view, and even jumped up and clapped my heels together as I sniffed the air and cried how jolly it seemed to be in the country again.

I was the life of the party. At the end of every story I laughed quite uproariously. It was something of a strain and occasionally I caught myself laughing fatuously when nothing funny had been said, but on the whole I felt successful.

It was the custom of the Seaveys to devote the early evening hours to the children, so we made a family group in the parlor while simple, mild Sam Seavey told them stories. For the first time that day I was able to relax, but after a while it pricked my conscience that I was not adding anything to the entertainment. It had grown quite dark. An idea came to me. Unnoticed by the others I stole out on the piazza, which ran past the open windows. I stood there until Sam had reached the climax of his tale, then, just at the breathless moment, I thrust my head in the window and cried "Booh!"

I had expected a general laugh at this little pleasantry. Instead of that there came an unearthly shriek from Gertrude and frightened wails from the Seavey children.

Mrs. Seavey sprang up and gathered the smallest one in her arms. "There, there, mother's precious," she soothed her, "nothing is going to hurt my little girl. Sam," she added in a slightly chilly tone, "please bring Tommie. We can quiet them better upstairs." Each took a sobbing baby and marched silently out of the room.

Mary turned on me reproachfully. "Austin, what possessed you?" she demanded.

"I was being funny," I responded, gloomily.

"Well, for pity's sake, never be funny again as long as you live!"

"I never will!" I promised, fervently.

At breakfast Sam and his wife were agreeable in a reserved sort of way, but I fancied a change in their attitude and racked my brains for a way to make a

last good impression. Finally an idea came.

"Reach a mother's heart thru praise of her children, that always works," I thought triumphantly, and just as the omnibus came in sight to take us away, I caught up Tommie and started down the path.

"This little boy is such a fine one," I cried enthusiastically, "that I think I'll have to take him away with me," glancing over the boy's shoulder to see Sophie's face light up.

At the words a horrible change came over Tommie. He thought I was going to carry him off. He stiffened in my arms from terror and his face turned deadly white, then he gave a most pitiful little cry. Sophie ran and snatched him, the omnibus stopped and I bundled my family in. As we drove off I looked back and saw both Sam and Sophie rubbing Tommie's hands. Their faces told me plainly what a hit I had made.

It took us the best part of a day to reach the beautiful country place of the Harbecks. As we approached the house I roused myself.

"And here," I said, grimly, "I am to play the rôle of sport."

"Play no rôle at all," implored Mary. "Just be natural, Austin, please!"

"Oh, I shall see this thing thru," I announced. "My luck is bound to change and this sort of a game," waving toward the beautiful estate, "cannot be hard to play."

The game did not really begin until the next day. The house was full of guests and a regular English hunt was scheduled to take place, all the gentlemen riding and the ladies following later with the luncheon.

"Do you ride?" asked Mr. Harbeck at breakfast. I saw Mary shaking her head at me, but I took no notice. I had a little scheme of my own.

"Yes, indeed," I responded, and my host seemed relieved at my prompt answer.

"Then I'll give you Precocity, he's a good one." Harbeck's horses were his special pride.

After breakfast Mary drew me aside. "Are you crazy, Austin? You can't ride with those men. For mercy's sake, drive over with us later."

"Don't worry a particle, Mary," I reassured her, "I have a plan that will work beautifully, but I must hurry or I won't be ready."

She released me reluctantly and I hastened away to array myself in a riding outfit that Harbeck supplied.

I knew I could not take fences and follow the other men in the hunt, but my plan was this: I would start with the rest, then pull my horse back and turn into some quiet lane. Later I would join the party at my own leisurely pace and give some good reason for not keeping up. In this way I would make a good impression at the start and no one would notice particularly what I did later.

Unfortunately, I did not reckon with Precocity. He was evidently accustomed to the hunt and he bounded forward with a speed for which I was totally unprepared. It was with difficulty that I kept my seat. Suddenly I saw before us a fence and the other men bobbing over it. Now was the time to turn. With a violent effort I jerked Precocity to the right, but the unusual proceeding seemed to excite the animal and he leaped forward like a wild thing. My glasses flew off and as I can see nothing without them I am unable to tell what followed. My

next sensation was of being hurled thru the air and thrown against a tree.

They began the search at luncheon time and found me in the course of the afternoon. I was stunned but otherwise unharmed. As I could not see, they led me home and Mary telegraphed at once for a new pair of glasses. Being quite helpless without them I was obliged to keep my room. Our host and hostess visited me when they could spare time from their other guests, but their visits were necessarily brief.

The new glasses arrived on the day fixed for our departure, so I put them on and came down to bid the Harbecks adieu.

"How is Precocity?" I inquired, as Harbeck and I shook hands in parting.

"I *think* the swellings are coming down," he answered, hopefully.

When we were settled in the train I turned to Mary. "Where are we to spend the rest of our vacation?" I inquired humbly.

Fortunately, my wife is something of a philosopher. There was a laugh in her voice as she answered, "Among strangers, where you can forget that you ever aimed to please!"

SARATOGA SPRINGS, N. Y.

The Cross and the Pagan

BY ELAINE GOODALE EASTMAN

As men in the forest, erect and free,
We prayed to God in the living tree;
You razed our shrine, to the wood-god's loss,
And out of the tree you fashioned a Cross!

You left us for worship one day in seven;
In exchange for our earth you offered us heaven:
Dizzy with wonder, and wild with loss,
We bent the knee to your awful Cross.

Your sad, sweet Christ—we called him Lord;
He promised us peace, but he brought a sword;
In shame and sorrow, in pain and loss,
We have drunk his cup; we have borne his Cross!

AMHERST, MASS.

China's Next Step

BY DR. SUN YAT-SEN

[In the following article the founder and temporary President of the new Republic of China indicates that in laying down that office he does not consider his task done, but plans for a new social and industrial revolution for China which shall put that ancient nation in the very van of the nations of the world and achieve results which could not be achieved without bloodshed in countries with a fixed social system. This remarkable utterance appeared first in the form of an address at the farewell banquet given in his honor at Shanghai by the Revolutionary Association, April 18, 1912.—EDITOR.]

THE republic is established in China, and tho I am laying down the office of Provisional President, this does not mean that I am going to cease to work for the cause. After laying down my office, still greater affairs demand my attention. China has been under

the domination of the Manchus for 270 years. During that time many attempts have been made to regain independence. Fifty years ago the Tai-ping Rebellion was such an attempt, but this was merely a revolution of the race (Chinese against Manchus). Had the revolution been successful, the country would still have been under an autocratic government. This would not count success.

Some years ago a few of us met in Japan and founded the Revolutionary Society. We decided on three great principles: (1) The (Chinese) people to be supreme as a race, (*i. e.*, not to be under the dominion of an alien race). (2) The people supreme in government. (3) The people supreme in wealth production. Now the Manchus have abdicated we have succeeded in establishing the first two of these principles, and it now remains for us to accomplish the revolution of society. This subject is being much discussed in the world today, but many people in China are ignorant of what is involved in such a question. They suppose that the aim of the regeneration of China is only that this may become a great and powerful country, on an equality with the great Powers of the West; but such is not the end of our effort. Today there are no wealthier countries than Britain and America; there is no more enlightened country

than France. Britain is a constitutional monarchy; France and America are perfect republics; but the gap betwixt the poor and the wealthy in these countries is too great. And so it comes to pass that thoughts of revolution still rankle in the minds of many. For, if this revolution of society be not effected, the many cannot enjoy complete joy and happiness. Such felicity is only for the few capitalists. The mass of laborers continues to suffer bitterness and cannot be at rest. Now, the revolution of the race and the revolution of government are easy, but the revolution of society is difficult. This is because it is only a people of high attainments that can work out a revolution of society. Some will say, "We have succeeded so far in our revolution, why not be content and wait? Why seek to accomplish what Britain and America, with all their wealth and knowledge, have not yet undertaken?" This would be a mistaken policy. For in Britain and America civilization is advanced and industry flourishes. It is therefore difficult to accomplish a revolution of society. In China we have not yet reached this stage, so such a revolution is easy for us. In Britain and America capitalists with their vested interests are intrenched and it is therefore difficult to dislodge them. In China, capitalists and vested interests have not yet appeared; hence the revolution of society is easy. I may be asked, "To accomplish such a revolution as you foreshadow, will military force be necessary?" I reply, "In Britain and America it will be necessary to use military force, but not in China. The coal strike in Britain is a proof of what I say. Yet the coal strike cannot be called a revolution. It is merely that the people desire to get possession of the sources of wealth and can only do so by violent means.

Altho the revolution of society is difficult to accomplish today, the time is surely coming when it will be an accomplished fact, but by what desperate means it shall be accomplished and thru what dangers the state shall pass it is difficult to prognosticate. If we do not, in the beginning of our republic, take thought for the future by-and-by when capitalism is developed, its oppression may be worse than the despotism which we have just thrown off, and we may again have to pass thru a period of bloodshed. Will not that be deplorable?

There is one point to which we ought to give the greatest attention. When the new Government is established it will be necessary that all land deeds shall be changed. This is a necessary corollary of the revolution. If we desire to forward the revolution of society, then when the change is made a slight alteration should be introduced into the form of the deed in order that the greatest results may be achieved. Formerly, people owning land paid taxes according to the area, making a distinction only between the best, medium and common land. In the future, taxes ought to be levied according to the value, not the area, of the land. For land varies much more than in the ratio of these three degrees. I don't know by how much the land in Nanking

differs in value from land on the Bund in Shanghai, but if you rate it according to this old method of three degrees you cannot assess it justly. It would be better to tax it according to its value, the poor land paying a low tax and valuable land a high tax. The valuable land is mostly in the busy marts and is in the possession of wealthy men; to tax them heavily would be no oppression. The poor land is mostly the possession of poor people in far back districts; nothing but the lightest taxes should be levied on them. For instance, a piece of land on the Bund pays taxes at the rate of a few dollars to the acre and a piece of land of equal area in the country pays an equal tax. This is far from being just. If the tax were levied on the value of the land then this injustice would be done away with. If you compare the value of land in Shanghai today with what it was one hundred years ago, it has increased ten thousandfold. Now, industry in China is about to be developed. Commerce will advance, and in fifty years' time we shall see many Shanghais in China. Let us take time by the forelock and make sure that the unearned increment of wealth shall belong to the people and not to private capitalists who happen to be the owners of the soil.

SHANGHAI, CHINA.

A Woman and the California Primaries

BY NEETA MARQUIS

THE *bête noir* of woman suffrage is full upon us in California, but the worst I can say, from personal experience, of service on an election board in one's own precinct is that it is not unlike being in the receiving line at a long drawn out, but particularly informal and neighborly reception.

It was my maiden experience in politics, as it was California's maiden experience with women on her election boards, and we—California and myself—were both curious to see how the newly enfranchised women would rise to their privileges in the first Presidential primaries in the Far West. We

of Los Angeles were specially keen in our interest, because the women had done so nobly in the recent city election in voting down the highly undesirable labor-union socialism with which Los Angeles was threatened.

Five-thirty seems an unearthly hour for any sort of a board to assemble, and on that particular morning, on the second Tuesday in May, the linnets were chattering their matins like the glib little heathen that they are, and the mockingbird was shouting for "Peter! Peter! Peter!" to get up "quick! quick! quick! quick! quick!" when we met at the little tailor shop which was to be our polling

place. As this was in a residence and apartment house district, available polling places were few, and the choice had lain between the tailor shop and a garage. Next time, if anybody should ask me, I'm going to vote for the garage.

At 6 o'clock our house was in order, the men having done the work, and the chief inspector, who chanced to be my next-door neighbor, opened the polls with a lusty "Oyez! Oyez! Oyez" which took us back to the days of primitive English constitutional rights. A brisk little man, acquainted with every one on the board, had been running fussily in and out, waiting for a chance to cast his ballot, and he became our first "customer." After he had voted, while the board sat around the long pressing-tables of the tailor shop, in readiness for the expected rush, he seated himself companionably and read us snatches of the news from his morning paper, which made us feel quite like a family party at breakfast.

The personnel of the board was interesting, the masculine majority being composed of two middle-aged retired capitalists who did neighborhood politics to occupy the time; the good-natured, balloon-faced young drug clerk from the pharmacy on the corner, and a typical, old-time, small politician, Irish, with a drooping reddish mustache which concealed the outlines of a hare lip, but not its lisp; shrewd, kindly blue eyes, and a droll humor. The other young woman clerk beside myself was a college girl who lived only two streets from me, and we soon discovered that we had mutual acquaintances.

Our Irish member was the only one on the board of avowed Democratic principles, and he took a good deal of chaffing from the other men with the utmost of good humor. He could remember when there were only three Democratic votes in the entire precinct, but he counted twenty-one before that day was over. Every time a woman voter required a Democratic ballot, he would twinkle a smile from his blue eyes around the table, and ejaculate a soft "God ble' her!" into the red mustache.

The greatest rush of the morning occurred around 8 o'clock, when the office

people, both men and women, were on their way to work. One woman created excitement by going up to the typewritten lists of voters posted on the electric pole outside and deliberately tearing off the first sheet.

"She thinks it's a trolley trip advertisement," suggested one of the judges, as the drug clerk fled to the rescue of the paper, which suggestion proved correct. The drug clerk restored the torn sheet with the aid of the pins Miss T. and I hunted up in the cracks of the tailor shop. Another woman was in such haste to catch her car that she rushed from her voting booth exclaiming excitedly, "Here—fold my ballot for me!" And while she was detained long enough to bunch it hastily together herself, she ran from the room before her number could be called or the ballot cast—and missed her car in the bargain, which quite vexed her.

But the early hurry was soon over, and by 11 o'clock interest had lagged to such an extent that the drug clerk facetiously suggested starting a crap game. Precinct 437 was not working itself into a nervous frenzy over the personal differences between a certain stout party and an uncertain but very determined one. There being no second to the motion for craps, the drug clerk absented himself temporarily and returned with a bag of cherries.

Our Irish member said it was quiet because "the women hadn't tore loo' yet"—that it was ironing day at home, and the women wouldn't come at all unless they got the ironing done first.

Voting remained light in the early afternoon, and as it was a warm day, with no drinking water handy, and the tailor shop was execrably ventilated, and the drug clerk had taken to smoking a cigar to keep the flies away, the chief inspector sent him down to the drug store for six bottles of iced root beer and soda.

These bottles had just been invitingly placed, the corks removed and straws inserted, when "the women tore loose." More arrived to vote within the next few minutes than at any previous time all day—while the frosty look began to depart from the inviting bottles, no one being unbusinesslike enough to take a

sip while under observation. The last woman cast a long and searching look at the group around the table, each flanked with a bottle and a straw, and I ostentatiously turned my soda label out. Then quiet settled down once more, and the men returned to their discussion of the never-palling topic of interest in Los Angeles—real estate.

Only one voter commented openly on the presence of women on the board. He was elderly, and announced that he had voted for every Republican President from Abraham Lincoln down, and he was glad to see the ladies helping at the polls—it looked good!

An interesting feature of Miss T.'s and my experience was the courteous manner of many of the men and most of the women, who bowed and smiled to us upon entering and leaving the room much as if we had been the hostesses of the occasion. The fact that most of the voters were personally known to one or more members of the board gave a friendly, chatty atmosphere, too, and the neighborliness of it all was emphasized by the way many of the women came, bare-headed and in afternoon house dresses. Even a political event of great moment can't awe the American woman into a hat if she doesn't want to wear one.

Women of varied types were there, from the flustered, bare-headed old lady with white dress and frizzes, who flew around and made a great to-do, but declared after her ballot had disappeared into the box that it "wasn't half 's bad 's going to the dentist!" to the severely elegant and elderly gentlewoman in exquisite black who arrived in an automobile and voted with a careful self-possession betokening perfect preparation. Husbands and wives came together, and mothers and daughters, and whatever political enmities there may have been in some of the households, they had apparently all been fought out in private.

The question had been rife all over California. Would the women avail themselves of the franchise on this important occasion, now they had gained it? In this particular precinct, representative of both the working and the leisure classes, they did. The entire vote for the precinct was less than half its

registered voters, but of those coming to the polls almost half were women—59 out of 133—and this in spite of ironing day! It speaks well for the real election day in November.

The precinct, as all Los Angeles, went overwhelmingly Progressive. Even the rising generation was active. A sweet little girl, perhaps eight years old, stationed herself outside the tailor shop for half an hour at a time, waited until the young drug clerk had smiled thru the window at her, then prest her face against the pane and said to him with earnest distinctness, "Make 'em vote for Roosevelt!"

Speaking now from the sublime height of a woman who has had real political experience, I can express myself as earnestly in favor of pleasanter voting places, but aside from the poor air and the esthetic discomfort of old-chromo-and-calendar-plastered walls and dingy windows, I can say only good of my experience. The drug clerk could have omitted a cigar or two to advantage, but the courtesy and consideration of all the men in other respects was above criticism. We young women were their friends and neighbors, and might have chatted with them on anybody's front porch as we did that day at the polls.

As for us, we tried our best to be useful and quick to learn our duties. Perhaps we gave satisfaction. At any rate, when the polls were closed that evening and the important work of counting was about to begin, one of the retired capitalists said:

"Perhaps two of you men had better handle these tally books—the girls haven't had the experience."

And the other retired capitalist said, with a bow and smile:

"I think the ladies had better do it. They have shown that they are fully capable!"

Our day ended at 9.40, with our tally books made up not only for the primary election, but for a county charter election which had also taken place. And I went home wondering why so many apparently intelligent men insist that politics is a "dirty game," which one cannot hope to touch at any point without contamination.

The "Titanic" Disaster and Peace

BY EDWIN GINN

[Mr. Ginn, the eminent Boston publisher and philanthropist, send us this little article which we commend to our readers. Mr. Ginn, it will be remembered, was the first citizen of the world to give a million dollars to the cause of universal peace.—EDITOR.]

I DOUBT if history records any nobler examples of heroism and self-sacrifice than were displayed by the passengers on board the steamship "Titanic." The sole thought among the men was, "Are there any more women and children? If so, they must be cared for first." The question as to whether they were from the steerage or first cabin was not asked. No preference was shown. This should be a striking lesson to those who are constantly preaching the indifference of the rich to the condition of the poor.

Another great lesson to be drawn from this disaster is that bravery and heroism are not bred solely in battle. The men who sacrificed their lives at the sinking of this ship had been, for the most part, trained neither for the army nor the navy, yet they stood back calmly and courageously, knowing that death must certainly come in a few moments. The soldier in battle always feels that he has a chance of life, but the men on the "Titanic" knew that they were doomed.

During these days when the minds of all have been focused on this terrible tragedy I wonder how many have asked the question, Why is it that the world stands aghast at the loss of fifteen hundred souls, when the news of a battle in which twenty thousand men lie dead on the field and as many more are maimed for life excites so little comment? To be sure, many read the account with deep sorrow and regret, but it makes but a slight impression upon the community at large. None of the wheels of business is stopped; the churches hold no memorial services.

But hardly had the "Titanic" sank beneath the waves when the various steamship lines began to take measures to prevent, if possible, another such disaster. Orders were issued to have all passenger boats provided with enough lifeboats and rafts to accommodate every one on

board; to install a sufficient number of wireless operators so that there would be always at his post an intelligent man familiar with the various codes; to lay out routes far enough south to avoid icebergs; to provide glasses for the lookout; to drill the crew daily in the performance of their duties. It should also be arranged that no man, captain or otherwise, would be obliged to be upon the bridge more than two nights in succession; and a rate of speed should be established, when in the vicinity of ice fields or in a fog, which would insure safety. Our Government, as well as the British Government, is investigating very carefully causes and conditions, and I hope that the maritime nations will in the near future enact laws which will insure the perpetuity of these safeguards by compelling their observance. The sinking of this great ship, with its precious freight of human life, will no doubt accomplish much in making ocean travel safe.

But what steps are being taken by the nations to save the world from a much greater sacrifice of human life in battle? And yet life should be as sacred in the one case as in the other. The only reason that I can see for the recognition of the value of human life in the one instance and its apparent disregard in the other is because of the feeling that one is an accident which should be avoided, while the other is taken as a matter of course, the result of many generations of custom and education. Men and women look upon the battlefield as a necessary evil, the only way in which the nations can be protected in their rights, and until they are brought to realize that human life should *always* be held sacred, we cannot hope to see the present war system done away with. Each nation is seeking its own interests, first, last, and all the time, rather than the good of all. This is a question that the individual na-

tion can never settle. Efficient and resolute co-operation of all the nations is what we need.

In future conferences at The Hague for the discussion of these vital questions affecting international relations, I sincerely hope that the governments, backed by strong public opinion, will appoint only men of large scope and vision, who are capable of dissociating the selfish interests of their own nation from their considerations and are looking only to the benefit of the entire human race. I would take all such questions entirely out of the hands of military men. I do not desire to say anything deprecatory to those men in their place, for as a class they are as humane and noble as any others; but they are unconsciously influenced by their vocation and have no proper place in Hague conferences. In some nations it has been estimated that one-fifth or one-sixth of the entire population are pecuniarily interested in the

continuance of the war system. In these conventions there should be no representative from any nation who is interested in such a system. The representatives should be those who have at heart the safety of the nations as a whole, and the creation of such a protective force as will insure the safety of each nation against the encroachment of any other. It would need but a very small proportion of the present armies and navies of the world to guarantee that protection. All of the instrumentalities necessary to carry on the world's work in peace and order would come naturally and easily after the rights of each nation have been secured in this way.

If these and similar lessons can be taken to heart in such a way as will bring about decisive action for the good of all, the heroes who were swept to their death on board the "Titanic" will not have given their lives in vain.

BOSTON, MASS.

The Undertaker's Bill

BY QUINCY L. DOWD

PASTOR OF THE CONGREGATIONAL CHURCH AT ROSCOE, ILL.

THE disposal of the dead in America is cared for by 25,000 undertakers. This gives one undertaker to each 3,400 of our population. There were 1,320,000 deaths in the United States during 1908. A fair estimate for 1911 would be 1,500,000 deaths, which allows an average of 44.1 funerals to each undertaker. But such are the chances of life and mischances of business that no undertaker can count on averages as a basis of patronage, save where large undertaking firms are organized with branch offices commanding the custom of various districts.

Probably no other trade has undergone greater development in the details of service offered than that of undertaking. Even the title—"director of funerals"—shows a professional change. Undertakers locate in towns having a wide stretch of farming country tributary to them. It is not uncommon to drive a hearse ten and twelve miles into the country to fill funeral orders. A Boston

undertaking company even advertises that it will send an automobile hearse as far as Providence, R. I., when its customers so request. Practically no burial occurs without an undertaker's assistance. Community feeling makes his professional aid indispensable, as much for the name of it as for the necessity. Besides, since embalming came in, which is now the all but universal usage, the tendency among undertakers is toward a higher grade of expert skill. They must know anatomy at least, and schools of embalming are largely attended. Undertakers are obliged to work under State or municipal license, and these requirements mean increased burial costs.

But why inquire into burial costs? Because it is the poor who die in largest numbers, out of all proportion to their share? No; for the rich man also dies, and is buried at a lavish price. Because the amount annually expended on funerals is an enormous death tax levied on family incomes? No; for annual fire

losses amount to nearly \$250,000,000, while burial costs estimated at \$100 for each of 500,000 adult funerals* and \$25 each for the 1,000,000 burials of children reach a total of but \$75,000,000. Still, these undertaking charges are staggering, partly because, as the proverb has it, "The poverty of the poor is their destruction," and partly because their present charges are confessedly exorbitant, also because funeral charges often show extortions suffered by those ordering a burial when forced to make terms with liverymen, cemetery associations and ecclesiastics under what is known as "the jug-handle-bargain" method, all due to the fact that the undertaking trade is unstandardized and without municipal control.

The above statements are borne out by what several prominent casket manufacturing and undertaking firms have published, proving that serious abuses exist in the management of burials. The writer's extended investigations into burial costs prove that ordinarily undertakers' prices are double what they should be; that carriage hire for funerals in many cities is at double rates; that cemetery exactions for "perpetual" care amount to a "hold up"; and that industrial insurance too often lends itself not only to foolish burial display, but also to collusion between undertakers and agents of insurance companies.

Recently, the New York School of Philanthropy undertook a local inquiry concerning the cost of burial among the poor in New York City. About a year ago the City Club of Chicago appointed a special committee, which began a similar canvass to find out how dearly citizens pay to bury their dead. Eleven years ago I started collecting data upon burial management and costs in many lands. This work was supplemented later by obtaining full reports on burial matters from American consuls and missionaries located in no less than forty countries. A like inquiry was made of Boards of Health of the chief cities of the United States. A mass of significant facts has thus been gathered dealing with casket manufacture and wholesale prices, with the conduct of the undertaking trade in different cities, with standardization of charges where it

exists, also with the rascally ruses of some small dealers in their exploitation of the ignorant and helpless. The whole result is a formidable showing of excessive funeral expenses.

Then there is such woful neglect and general ignorance among average families concerning burial necessities and expenses; whereas every head of a household ought to inform himself betimes on so imperative, so inevitable a demand. Probably this failure in information is due largely to the lack of municipal oversight of burial. As it is, city welfare exhibits and municipal congresses have nothing to show when it comes to municipal cemeteries and crematories, or a bureau of funeral management.

Strolling one Sunday thru Forest Hills Cemetery (Boston) I met a solitary man haunting this park of the dead. We fell to talking. He remarked, "A year ago I never thought of there being such a place as this, but we lost a dear child. Now I can hardly keep away from here." Probably his negative state of mind regarding burial is representative of the mass of well-to-do folk.

The one class of people who *do* anticipate death and provide against burial costs are wage earners. To them death is not alone a bereavement; it is a financial calamity; burial not a mere necessity enforced by human feeling and statute, but a drain on resources, a strain on the home budget. In numberless cases widows are thrown into debt and obliged to eke out payments for funeral charges at the cost of their children's food. Observation by ministers and social workers shows that the standard of "a decent funeral" among plain people of the day-labor class is about on a par with that of the middle class. It is the "one touch of nature" which constrains even the very poor to desire above aught else to furnish a burial of the "costlier" sort.

I witnessed a Greek funeral in Salt Lake City five years ago. A day laborer had been killed at one of the big stamp mills. He was member in an insurance sodality with a \$300 policy. A friend in the burial party told me that this whole sum would be spent on the funeral. In Chicago, within two years, a

mother died after a long illness which ate up \$1,000 and more. The daily wage of each working member of the family did not exceed \$1.50. They carried insurance in a mutual aid society. The expenses of this funeral were \$500, including \$50 paid to the officiating priest. Instances like these are not to be brushed aside as insignificant, for they furnish big items in the high cost of living. Popular imagination needs to be pricked and goaded by learning the hard facts belonging to nation-wide vital statistics and census reports, as they bear on a million and a half deaths annually, involving almost as many households in funeral costs. A responsible informant residing in Rockford, Ill., wrote me that upon the death of a two days' old infant in a poor family she made a coffin, a wooden box, prettily trimmed and inclosed in another box covered with thick white paper. "When I went for the undertaker's certificate, I was informed that it was contrary to the law to bury the child in a home-made box, and that he couldn't give me the certificate. At last he did supply one as a personal favor. The sexton told me it cost another poor family \$25 the day before to bury an infant which had never breathed." I received a letter from a missionary pastor in North Dakota, in which he relates that undertakers and the clergy of a certain "foreign colony" in his region are in collusion to "fleece their flock" at burial. True, facts of this kind do not touch honorable undertakers. They only show that the business should be brought under public regulation. It ought not to be possible for a Chicago undertaker to say: "I can live on *one* funeral a month." Facts already procured about burial costs depend on *publicity* for any use and benefit that may come from collecting them. A campaign of information leading to a crusade of transformation in disposal of the dead is a requirement laid at the doors of churches and charity organizations. Already leading casket manufacturing and undertaking concerns are taking the initiative to reform prices and funeral management, notably one in Chicago and another in Boston, whose main appeal for patronage is that they aim to reduce the cost

of a funeral from one-half to one-third the usual charge, also to standardize prices.

The query might arise, Is there a recognized standard of average burial costs? Undertakers themselves are the ones to divulge this secret of the trade. Only last November, at Washington, D. C., the Employers' Liability and Workmen's Compensation Commission met, and before them Frank V. Whiting, attorney for the New York Central Railway, stated that he regarded "an allowance of \$100 as sufficient for the funeral expenses of an average railroad employee." But D. L. Cease, representative of the railroad employees, took issue, saying "he did not believe a man could be decently buried for less than \$125 or \$150." Now compare even these moderate figures with the casket manufacturers' prices to undertakers. I am authoritatively informed that undertakers demand that coffins be sold to them at one-fifth and sometimes one-tenth the price they will charge their customers. What other legitimate business lays claim to so excessive a profit, or charges so high for extra service? Not long ago 175 miners lost their lives in the Cross Mountain Mine, Tenn. The Knoxville Iron Company purchased eighty-four caskets for that number of dead employees at \$17.50 each. One may presume that the company did not fail in providing a decent funeral.

A few fundamental principles underlie efficient burial reform. Knowledge of these and due weight given to them are prerequisites.

(1) Death is a private and family misfortune.

(2) Burial is a public necessity, recognized as such by even the primitive degree of regulation in force.

(3) For sanitary reasons legislation restricts private burial and charters cemetery associations. A further precaution—that of securing vital statistics—is widely in vogue. Public health involved in proper interment carries with it the duty of protection from overcharges for lots and graves.

(4) Municipalities have their boards of health under whose administration undertakers and their establishments *may* be licensed and subjected to control.

(5) Cemetery associations likewise *may* be governed so as to comply with sanitary demands. But the management of cemeteries calls for thoro inspection to provide protection to public health, especially those under church control.

(6) Crematories *may* be built, their management ruled by municipal ordinance. However, the above points fail to act as a check on burial costs, but rather work to increase them. The public receives no protection from excess of charges.

(7) The revolutionary thing needed is:

(a) To establish municipal cemeteries. Seattle is, to my knowledge, alone in purchasing a 250-acre tract for burial purposes.

(b) To build municipal crematories. Properly conducted, cremation is not only the most sensible and sanitary mode of disposal of the dead, but also promotes economy and simplicity in funeral arrangements.

(c) To regulate the undertaking trade, making it a municipal service by contracting out the business for definite districts under published schedules, with fixt prices as to styles of coffins and services, approved by a bureau of burial affairs connected with the board of health. A practical regime of this kind is what European cities have adopted and are working under. It is the one way of protecting the people and of protecting the trade at the same time.

(d) To treat burial as a public utility. Burial should be made a municipal service for all persons alike. This is the prevalent practice in cantons of Switzerland.

(e) To furnish adequate transportation facilities for burial parties at reasonable rates.

(f) To arrange for an inter-municipal commission on burial management, which shall work out a plan to standardize schedules of expenses essential to an ordinary burial.

One need but refer to the article of Prof. Graham Taylor, in *The Survey*, October 2, 1911, on "Pioneer Inquiries into Burial Costs," to obtain a quickened conscience as well as fuller intelligence on this subject.

Facts are stubborn things, and none so stubborn as *sentiments*. The Church has held immemorial prominence in the conduct of funerals. Each pastor officiates in scores of them. He observes the lavish outlay and elaborate display. His good sense is offended; his heart aches at the needless burden of it, all so good-hearted and so unthinking. That smother of flowers! and the comments on "such beautiful floral emblems"!—each fine in itself, but crushed and characterless in the profusion of a huddled heap. He knows, too, that save for the ignorant and the "fussy" people, a man cares little about his own burial. He would wish it to be plain and inexpensive, "the whole outlay on a funeral," as one prominent Boston minister has said, "not to exceed \$50." The Christian Church has it for one of its first duties to Christianize burial rites and costs. As things are, burial is paganized.

While undertakers and ostentatious social sentiment are thus busily engaged to augment what is counted indispensable to a decent funeral, it lies on the conscience of the Church as part of her social service to simplify burial; for the best conducted burial is still a health-exposing and home-breaking calamity, the best that can be said of it. Here is a task for ministerial unions and Church conferences to fulfil, viz., a thoro survey of burial conditions, that so they may exert intelligent influence to substitute in place of chaotic and cruel mismanagement of burial its standardization under municipal control.

According to Dr. Edersheim, in the days of St. Paul "wasteful expenditure at funerals was so great as to involve in serious difficulties the poor, who would not be outdone by their neighbors. At last a needed reform was introduced by Rabbi Gamaliel, who left directions that he was to be buried in simple linen garments. In recognition of this a cup is to this day emptied to his memory at funeral meals. His grandson limited even the number of grave-clothes to *one* dress." Would that a Christian "Gamaliel," some great teacher revered of many followers, might start a like fashion by his own example.

Our Poultry Yard

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

ACCORDING to the returns of the Thirteenth Census there were on the farms of the United States, on April 15, 1910, over 295,000,000 of fowls, valued at \$154,000,000. This does not take into consideration the fowls which were kept in the back yards in cities, towns or villages.

Of greater interest, perhaps, than the value of the fowls is the value of the eggs laid during the census year. The eggs produced during 1909 upon the farms of this country numbered about 1,600,000,000 dozens, with a value of over \$300,000,000. Thus, as the chart shows, the value of the eggs laid during the year was almost exactly twice the value of the fowls on hand at the date of the census. The increase in the production of eggs was 23 per cent. over that of 1899, but the value of the eggs more than doubled during this period, the exact increase being 112.6 per cent. The eggs produced in Massachusetts

and Connecticut brought about 30 cents a dozen in 1909, while those produced in the Southern States sold for less than 20 cents a dozen on the average.

In addition to the eggs produced in 1909 there were 488,000,000 of fowls raised during the year with a value of over \$200,000,000. It is thus evident that the value of the fowls raised during the year exceeded by about \$50,000,000 the total value of the fowls on the census date. Thus, a farmer with \$100 worth of fowls on any date might expect to sell about \$130 worth of poultry and \$200 worth of eggs during the year and still retain at the end of the year a value in fowls equal to his original investment. The value of the coops and enclosures and of the feed, together with the cost of the care, cannot be determined, but upon the money invested a very decent rate of return for the year can be expected.

NEW HAVEN, CONN.

Frederick Harrison and His Contemporaries

It is easy to realize why Mr. Frederick Harrison's *Autobiographical Memoirs** are in a class by themselves and of such peculiar interest. Mr. Harrison, who is now in his eightieth year, has for fifty years been one of the most independent and courageous of English publicists, and the independence and courage that have characterized his public life appear in his memoirs. "I shall try here," he says, in describing the aim he has had in mind in writing his memoirs, "to put down a few of my recollections about public affairs and men of mark, the changes in life and customs which I have witnessed, and what might interest people to hear if they questioned me a hundred years hence." Institutions as well as men and customs are dealt with in this spirit in Mr. Harrison's retrospect. One of the first English institutions with which he came into contact was Oxford. He went there in 1849, a very raw lad of eighteen, with the remnants of boyish Toryism and orthodoxy still holding on as the husk within which his ideas were maturing. He was at Oxford nearly six years, and left the university a republican, a democrat and a free-thinker. He does not look back to Oxford with any particular reverence, for he early lost all faith in its theological and political traditions, and while there he had an incurable distaste for any of its honors and its prizes, and its dominant authorities did not inspire him with awe or attract his allegiance. None the less Mr. Harrison counts his six years at Oxford as of the most satisfactory period of his life, and he nurses the hope that notwithstanding all his heresies and offenses, the Warden and Fellows of Wadham College will suffer his ashes one day to rest within the chapel which he dearly loves, and wherein for six years he almost daily

joined in the Psalms and heard the Bible read.

Mr. Harrison was not prepared for Oxford at one of the great public schools; and he has seemingly no regret that Eton or Harrow or Winchester was not his lot; for he regards the discipline of these great public schools as a training mainly in the rigid caste system on which English society is based. If it teaches boys to be gentlemen toward their social equals, it rarely teaches them to be either generous or just to those who are poorer than themselves:

"The great public schools train up the sons of the well-born and the wealthy to regard themselves from boyhood as born to be the natural officers and captains in the army of the nation. The masses, called the lower classes, are naturally privates in the ranks, and this organizing in social grades is recognized as the bond of English society. Eton, Harrow, Winchester and half a dozen more private schools are really the nidus out of which is bred our present aristocratic conservatism in Church and State. The entire pre-lacy, civil and military service, government, army and navy, and even literary potentates, issue out of these seminaries which are the true keystone of British society. And as I cannot attribute either divine origin or celestial inspiration to that society, I do not regard the public school system as an infallible nursery of morals or an indispensable academy of enlightenment."

Passing from institutions to men, Mr. Harrison observes on the many lawyers with whom he has been in more or less intimate contact since he was called to the bar in 1855. Only a few of them, he discovered, had any clear ideas on the general problems of philosophy or politics. Some of the greatest lawyers who were ever on the woolsack were bigots in religion and party hacks in statecraft, and he cannot recall a great lawyer in full practice who had any serious interest in matters of abstract thought or any rational sense of spiritual truth. From men as a class, Mr. Harrison turns to men as individuals, and offers some estimates of the statesmen and politicians who have been his contemporaries. Peel, he is confident, will live in history as the wisest and

*AUTOBIOGRAPHIC MEMOIRS. By Frederick Harrison, D.C.L., Litt.D., LL.D. Two Vols. Pp. xi, 358; xvii, 405. New York: Macmillan Company. \$7.50

most honorable English statesman of the nineteenth century, for his whole career—administrative, financial, ecclesiastical and parliamentary—was one gradual and reasoned adaptation of an oligarchical to a popular system of policy. Palmerston he ranks as the only diplomatist that England had in the reign of Queen Victoria who in resource, audacity and knowledge could be ranked with the famous diplomatists of Europe. He regards Palmerston as the author of the type of imperialism which after his time was nicknamed Jingoism; and Mr. Harrison is convinced that it was from Palmerston that Disraeli learned how to gain power by fanning the vanity of a nation. Lord John Russell, according to Mr. Harrison, was a quite different character. He was inferior to Palmerston in tact, in resource and in sagacity. But he had a far more genuine love of justice, reform and public faith.

At the end of the fifties of the nineteenth century he regarded Bright as the only great public man that England had; and in those days Mr. Harrison busied himself with volunteer service in the press to show the world at large that men of education and reflection joined heart and soul in John Bright's attack on the aristocrats. Gladstone impressed Mr. Harrison by his extraordinary power as a speaker, and his fascinating and inspiring personality. In all questions of finance and parliamentary government he regards Gladstone as supreme or inferior only to Peel. But in foreign policy he had no thoro mastery, and in Mr. Harrison's judgment Gladstone made many fatal mistakes, and acted with strange inconsistency, for he was constantly dominated by racial, accidental, personal and even religious sympathies.

Mr. Harrison was a convinced home ruler long before the Liberal party, or, rather, the decimated division of it that followed Gladstone in 1886, became converted to the Irish national idea. He concedes that Parnell was the most elegant and distinguished figure among the public men of his time; but on Mr. Harrison Parnell left the impression of superhuman and satanic pride and thirst for personal victory.

If there is one English movement

more than another for which Mr. Harrison has worked in season and out of season for the greater part of his life, it is for the spread of the teachings of Auguste Comte. Two of the most informing chapters in his memoirs are concerned with Newton Hall, Fetter Lane, Fleet Street, where for twenty-one years the Positivists of London had their meeting place. "As a form of worship," Mr. Harrison writes in describing the work of the society that long used one of the most historic halls in the City of London as the center of its propaganda, "Positivism is simply right living inspired by humane feeling. As a mode of religion it means nothing but the religion of duty—duty as revealed by science and as idealized by the reverent soul."

It is difficult and in fact almost impossible to recall an Englishman who has had any part in the making of history in the nineteenth century who had a higher conception of duty, or who was more continuously loyal to his conception of duty than Mr. Frederick Harrison. He has always been independent in utterance and courageous in action when action was needed. Oftentimes he has been self-sacrificing in causes which he conceived to be right, and the independence and sincerity that characterizes these memoirs will make them of value as long as people continue to be interested in the men who were Mr. Harrison's contemporaries during any part of his long and peculiarly useful life.

Timely Books About Law

SELDOM in our history has there been among laymen so deep an interest and so much question as to law. To one layman it is a protector; to another a burden; to another an injustice; to another the object of constant appeal, and to another the subject of constant denunciation. Law of some sort is beyond doubt the basis of stable society—and ours to-day is somewhat stable and complex. Yet there is ever a movement toward more or less thoro revision, and in some quarters toward an overthrow of law. To-day almost every one considers himself competent to settle the law. Every day we hear that there ought to be a law

so and so, or that such a law ought to be abolished, or that such another law ought to be amended. Summing up such criticisms we find that every man wants the law so made that everybody else shall be compelled to do as he would have them do, forgetting that the law is a sort of consensus of fundamental necessity and desire in the long run for the majority.

That select few, made up of lawyers and laymen alike, who want calmly to inform themselves on the really great questions before they talk conclusively or act finally upon them, might well look at three small books lately published. In a week's time they may be mastered by a novice and the master of them can then go forward with a confidence that others as well as himself will respect—a happy condition not always found.

Our American law is mostly based on the English law. Our legal principles and our feelings are more sympathetic with the English, perhaps, than with those of any other nation, therefore Mr. Geldart's book,¹ a summary or simple statement of the basic principles of the English legal system, has prime value. It gives enough of the history and scope of statutes and the influence and weight of decisions or judicial interpretation, these last making what we call common law, to show what law is, and why it is, and how it is. If the book could have advanced into American law, it would have been somewhat more useful. As it is, it shows the general lines within which a citizen's liberty is insured and his license restrained, and it shows the expansion of these lines.

The spirit of the English law, its genius, is presented by Sir Frederick Pollock in his lectures in 1911 before the Yale Law School.² Since the death of Maitland, with whom Sir Frederick was associated, there has been no man better fitted to present, from long study and tried experience, and in a vivid and popular way, the living principles and purposes of the English law. These lectures close with the exhortation that there is

"no more arduous enterprise for lawful men and none more noble than the perpetual quest of justice laid upon all of us who are obliged to serve our lady 'Common Law'."

More to the point in the present agitations is Dr. Storey's splendid, thoughtful, candid, comprehensive discussion of the needs of reform in legal procedure.³ He does not so much concern himself with the faults of the substantive law, the law wherein man's rights are laid down, but deals chiefly with procedure, or adjective law, that is, the rules whereby those rights are secured. It is in this field that the greatest relief, surely 95 per cent., from the so-called "errors of the law" can be obtained. There is not a chapter in the book that does not deserve attention much beyond the space we can give, for it all goes toward the reduction of criticism, and temper, and waste of time, and life, and money, and the waste of justice also.

An Artillery Officer in the Mexican War, 1846-7. Letters of Robert Anderson, Captain Third Artillery, U. S. A. With a Prefatory Word by his Daughter, Eba Anderson Lawton. New York: G. P. Putnam's Sons. \$2.

The letters that McClellan wrote to his wife undid him, and threw a relentless light upon his motives and his acts. Those of Robert Anderson, now before us, reveal, contrariwise, a man whose *vie intime* strengthens the reputation based upon his public career. Captain Anderson served with General Winfield Scott and the army of invasion from the organization of that force until he was invalidated home with a bad arm after Molino del Rey. He admired and believed in Scott, whom Polk had sent to the front more in despair than in confidence. He was disgusted by the conduct of the Administration more than once, until the last batch of appointments convinced him that the "army will soon not be, it hardly is now, a place for gentlemen." But his daily letters home show steadiness, loyalty, modesty and honest piety. Taken in connection with Polk's diary, recently published, they add materially to our knowledge of the workings of the Mexican War. The Anderson of these letters could not have failed to stand steady under fire at Sumter.

¹ELEMENTS OF ENGLISH LAW. By W. M. Geldart, of Lincoln's Inn, Barrister. New York: Henry Holt & Co. \$1.50.

²GENIUS OF THE COMMON LAW. By Sir Frederick Pollock, D.C.L., LL.D. New York: Columbia University Press. \$1.50.

³THE REFORM OF LEGAL PROCEDURE. By Moorfield Storey. New Haven: Yale University Press. \$1.35.

Scum o' the Earth. By Robert Haven Schauffler. Boston: Houghton Mifflin Co. \$1.

Robert Haven Schauffler sings with poetic skill and humanitarian intensity the rights and wrongs of immigrants. In his most important poem he defends these people as a whole, and rightly, against those who speak of them as "rabble and refuse":

"'Rabble and Refuse' we name them
And 'scum of the earth,' to shame them,"

and he bids his countrymen to

"Bend and invoke . . .

Mercy for us of the few, young years,
Of the culture so callow and crude,
Of the hands so grasping and rude,
The lips so ready for sneers

At the sons of our ancient more-than-peers.
Mercy for us who dare despise
Men in whose loins our Homer lies;
Mothers of men who shall bring to us
The glory of Titian, the grandeur of Huss;
Children in whose frail arms shall rest
Prophets and singers and saints of the West."

Out of them came Chopin and Dvorák, Columbus, Dante, Galileo, Angelo, the shepherds on the hills of Galilee, King David, the Christ—a beautiful theme for the optimistic vision of the poet who turns his eyes toward the mountains and sees only the pinnacles. The good statesman, however, must have a closer look. As the good housekeeper shuts the front door against those who bring mud on their boots, so the good housekeeper of a nation should sometimes ask himself questions which would by inference come under the poet's condemnation. He may not indict a people, but he must often bring into court a system that leaves a people content with thugs and dynamiters, with Petrosinis and MacNamaras, with the Mafia and the Camorra, and he must do this without stopping to listen to

"that sad little tune

That Chopin once found on his Polish lea
And mounted in gold for you and me."

Among the Eskimos of Labrador. By S. K. Hutton, M. B., Ch. B. Vict., F. R. G. S. Philadelphia: J. B. Lippincott. \$3.50.

This book gives a vivid idea of the character and life of the Labrador Eskimos. The author spent five years among the people, and shared in their work and pleasures. The interior of Labrador offers but little attraction to the pioneer or explorer. Devoid of mineral wealth, and scarcely able to support life, the solitudes remain year after year much the

same. The inhabitants live mostly on the coast, where they gain their living by fishing, sealing and walrus hunting. In feature they strongly resemble the Mongolian type, which leads the author to conclude that they are a section of the tribes from the Siberian coast that long ago crossed Behring's Strait and scattered over Alaska and Greenland. During the winter the temperature frequently drops to forty degrees below zero. On one occasion, after a merry party of Eskimos had visited the author in his hut, he opened the window for a few moments to air the room, but at once all objects were encrusted with frost and some growing plants immediately killed. On walks in this temperature it is a duty to watch your companion's nose for signs of whiteness, that indicate frostbite. The low temperature allows drinking water to be carried in sacks. The children are sent to a nearby river, cut a few pieces of ice, and bring the drinking supply home in a bag thrown over their shoulder. The author finds the people quick to anger, quick to forgive, and on the whole a simple, kindly and hospitable folk.

Through the Postern Gate. By Florence L. Barclay. New York: G. P. Putnam's Sons. \$1.35.

The title of this book has such a flavor of the medieval that until one discovers that it is the same story which has already appeared in a magazine as "Under the Mulberry Tree," it gives a distinct shock of pleasure to be introduced to its hero drinking tea in a pale gray suit and lavender tie. And he proves a wholly delightful boy who lives up to the modernity of his costume by owning three aeroplanes and loving a woman precisely ten years older than himself. These two evidences of up-to-date-ness, while by no means the only ones displayed by the hero, may perhaps be considered the points about which the plot particularly revolves. The charming heroine's excess of years constitutes the foundation of the wall of her city of defense, playfully likened to ancient Jericho by the lover who lays siege to it, while the aeroplane brings on wings, so to speak, the climax of the siege on the fateful seventh day. The story is not profound, and never leaves one in much doubt as to the

final outcome, yet it has about it a charm as irresistible as that of its "Little Boy Blue," and keeps one eager to know how the walls of Jericho will be made to fall, even tho he hardly doubts that they will do so. One does feel disposed to protest against the unfortunate "Professor" as a representative type. Perhaps all English professors are like him, but the American variety, even when they profess Greek, is not recognizable by galoshes and "an umbrella with a waist." Another discrepancy between the book and the facts as we have observed them is that so exceedingly well-informed a young man as the hero, a Cambridge B. A., should be ignorant of the nature of a placket, talking of "a girl dressed in a placket," until enlightened by his friend and admirer, the cook. Still, as the reviewer once knew a most brilliant young Oxonian who persistently referred to a gusset as an article of feminine adornment, perhaps the conclusion may be drawn that the details of woman's costume, later than the Augustan Age, are not studied in English universities—a defect in their curriculum which it is perhaps the mission of our Rhodes scholars to repair.

Many Celebrities and a Few Others. By William H. Rideing. Illustrated with 16 photographs. Garden City, N. Y.: Doubleday, Page & Co. \$2.50.

One of the best of the many books now lighting up the trail of our literary history is Mr. Rideing's volume. The title, in one respect, may be misleading, for the journalistic author is quite as much interested in the thing celebrated by the "celebrities" as in the men whom he includes under that name, in the moving mass of American life as one sees it in the literary and journalistic classes. Mr. Rideing has done rare service both as a wide-awake observer with the reporter's pad in hand and as an office editor with the scissors and quill, and the money-box close at hand. Beginning journalistic training under Samuel Bowles, of the *Springfield Republican*, and in the old editorial rooms of the *Tribune* in Printing House Square, where his associates were Greeley, Whitelaw Reid, John Hay, Bayard Taylor, Charles A. Dana, George Ripley and a steady stream of lively men, he graduated thru the aca-

demical pages of the *North American Review*, and finally hung out his banner at the front windows of *The Youth's Companion*. Meanwhile he had sat at dinner with statesmen like Gladstone. He had pestered dukes for magazine articles. He had paid five dollars for a poem and a thousand dollars for a name at the foot of a commonplace article. He had hobnobbed with nabobs and restaurant swells, and seems to have got something amusing out of each. It is clear from this late book of reminiscences that he still has an eye for "copy." The copy that he supplies is always interesting. It runs from "the famous old seaport" where he was born down to the "windows" with their dissolving views of sunset. It interprets the haunts of Bohemia in New York, translates the lingo of the stage as heard in the dressing rooms of the great actors, and the other stage lingo to be heard in the lobbies of Parliament.

Butterfly and Moth Book: Personal Studies and Observations of the More Familiar Species. By Ellen Robertson Miller. With illustrations and drawings. 16mo, pp. xviii, 249. New York: Charles Scribner's Sons. \$1.50.

It is worth while to read this book simply to learn how one variety of moth has the extraordinary instinct to make sure that the ovary of the *Yucca* blossom, in which it is to deposit its egg, shall be perfected. The female moth actually gathers the pollen from the anthers into a ball, then crawls up the pistil and carefully rubs it over the stigma. Having thus assured the fertilization of the ovules and the growth of the ovary to full size she deposits the egg and leaves it to grow and mature. There is nothing more wonderful in the story of the instinct of wasps as told us by a French naturalist and repeated by Bergson in his "Creative Evolution." The present author has observed this action which we call instinct, and her book is an account of her own observations in connection with a large number of moths and butterflies. This is not a manual of insect fauna, but it shows the reader how to learn for himself what the author has learned, but what few take pains to see. The illustrations are numerous and good.

The New History. By J. H. Robinson.
New York: The Macmillan Co. \$1.50.

"The historian, from a narrow, scientific point of view, is a little higher than a man of letters and a good deal lower than an astronomer or biologist. He need not, however, repudiate his literary associations, for they are eminently respectable, but he will aspire hereafter to find out, not only exactly how things have been, but how they have come about. He will remain the critic and guide of the social sciences whose results he must synthesize and test by the actual life of mankind as it appears in the past."

This is what Professor Robinson means by "the new history." Hitherto history has been largely a mere political chronicle except where, influenced by literary motives, it, "like melodrama, purposely selects the picturesque and lurid as its theme." The latter method, the author points out, resembles that of a "clinical lecturer who dwelt upon leprosy and bubonic plague for fear his students might be bored by a description of the symptoms of measles and typhoid." But recently the conception of history as a science, as a conscientious effort to explain the world of today so far as possible by the world of yesterday, has gained ground. It is this idea that Professor Robinson champions in the eight essays of the volume. The author recognizes the danger that scientific history may lack popularity because it deals with the daily life and progress of mankind rather than with striking incidents and romantic personalities. But he holds that the study of the slow growth and development of human institutions, since by this method alone we can understand our social environment, can be made as interesting as it is important. Professor Robinson's own books prove that a crabbed style is no essential in scientific history and that an historian with a well developed sense of proportion may nevertheless be readable. Besides laying down the principles of new history, the book contains an application of them to the important questions of the true nature of the "fall of Rome" and the French Revolution. The idea of progress which is the fruit of modern natural science has been adopted by history, and thus the staunchest ally of the conservative has now joined the other sciences in the ranks of progress. In the words of the author:

"History has been regularly invoked, to substantiate the claims of the conservative, but has hitherto usually been neglected by the radical, or impatiently repudiated as the chosen weapon of his enemy. The radical has not yet perceived the overwhelming value to him of a real understanding of the past. It is his weapon by right, and he should wrest it from the hand of the conservative."

Using this weapon freely in the conflicts of the present, Professor Robinson stigmatizes the principle of conservatism as "a hopeless and wicked anachronism."

Literary Notes

....Edwin M. Borchard, Law Librarian of Congress, has just issued thru the Government Printing Office at Washington a comprehensive and scholarly *Guide to the Law and Legal Literature of Germany*.

....*The Memoirs of the Duc de Lauzun* are the practical record of a libertine's career at the close of the old régime. The author is one who died better than he lived. (Sturgis & Walton; \$1.50.)

....Those contemplating a trip to Japan can do no better than read Joseph H. Langford's *Japan of the Japanese*. It is a guide book, history, explanation and interpretation all in one. (Scribner; \$1.75.)

....Tho Emerson has been an active influence in France and more than one man of letters has undergone it—Maeterlinck being the standard example—his essays have had very limited circulation there and we note with interest the publication thru Félix Alcan of *Essais Choisis*, a translation by Henriette Mirabaud-Thorens.

....In *War and Other Essays* are contained seventeen papers on diversified sociological and public topics by William Graham Sumner, Yale University's greatest teacher and most trenchant intellect of the last twenty-five years. The book is dogmatic, vivid, powerful, sound and thought provoking. A valuable biographical introduction is contributed by Professor Keller. (New Haven: Yale University Press; \$2.25.)

....A small volume containing matter of large practical value will be found in Prof. Shailer Mathews's published address on *Scientific Management in the Churches* (Univ. of Chicago Press; 50 cents). Prof. Mathews shows conclusively how the application of certain well known principles, designed to establish efficiency in other lines, would, if applied to church work, result in the conservation of much energy and the elimination of great waste.

....Some of Leonard Merrick's best short stories—and our high opinion of this Englishman as a story-teller is no secret to our readers—are collected in the volume *Whispers About Women*, published by Mitchell Kennerley (\$1.20). Here is hammock literature for which no one need apologize: the cleverness, cynicism and sentiment are nicely combined with an understanding of the human heart that the heavy-weight novelists may well envy Mr. Merrick.

....It is gratifying to note the solid scholarship, wise selection of material, and lucid treatment which distinguish the new volumes of The Westminster New Testament. *The Captivity and Pastoral Epistles* are edited by Rev. James Strachan, M. A., and *The Revelation and the Johannine Epistles*, by Rev. A. M. Ramsay, B. D. For teachers and Bible students these commentaries are excellent in scope, trustworthiness, and style of exposition. (Revell; 75 cents each.)

....If the reader can surmount the "Stumbling Stones" which in the form of "Capitalized Commonplaces" encumber the pages of Rev. Frank Crane's *Business and Kingdom Come* (Chicago: Forbes & Co.; 75 cents), and is adept in jumping from one broken sentence to another, he will find at length in this little volume a panegyric on the National Cash Register Company and its methods of dealing with its employees. Both the management and the output of the company Mr. Crane regards as potent factors in raising the standards of morality among working people.

....Those admirers of Ruskin who want a Boswellian account of all that their hero was and did and said in the various periods of his long life will find just what they want in *The Life of John Ruskin* in two fat octavo volumes by E. T. Cook (Macmillan; \$7). Mr. Cook has done his work well in the way he set out to do it. To him Ruskin was one of the greatest of men and every detail relating to the life and work of the master is almost precious. Some of the details of Ruskin's earlier years might well have been spared, to the shortening and bettering of the book, but it is an able, conscientious and worthy biography of a strong man—one who made his mistakes, yet who left the world somewhat better for his having lived.

....E. P. Dutton & Co. import new editions of two interesting works in Trübner's Oriental Series: *The Life of Hiuen-Tsiang by the Shaman Twi Li* (\$3.50), with an introduction containing an account of the works of I-Tsing, by the late Prof. Samuel Beal; and the two volume *Life or Legend or Gaudama, The Buddha of the Burmese* (\$7), by the late Bishop Bigandet of Rangoon.

....The World Peace Foundation of Boston deserves the thanks of international lawyers and peace advocates for issuing in a comprehensive volume of 674 pages *The Argument of the Honorable Elihu Root, Chief Counsel of the United States before the North Atlantic Coast Fisheries Arbitration Tribunal at The Hague in 1910*. A reading of Senator Root's address as now printed confirms the opinion of those who heard it when delivered, that it is one of the greatest speeches delivered by any American statesman in the present generation. As might be expected, Dr. James Brown Scott, of the Carnegie Foundation, has written an able and excellent introduction. (\$3.50.)

....Mr. Charles Whibley's *Studies in Frankness* are delightfully done, and most pleasingly printed. His learning nowise impairs the lightness of his touch in handling Petronius, Heliodorus, Apuleius, Lucian, Urquhart, *et al.* Not all of these writers—some would write "none"—were altogether edifying; but Mr. Whibley writes to entertain persons of discretion, and has no more thought of "improving" his reader à la Chautauqua than the authors of the picaresque romances had. And whereas the latter pretended, Mr. Whibley does not even pretend. But though he is no moralist he is a shade too much the dogmatist: where his faults as an essayist crop out he is, moreover, overwhelmingly "British." The author has not revised some of his statements which are no longer true: as that Sterne has "escaped the impertinence" of biographers. There are errors also in the hectic paper on Poe. From the publishers of *Studies in Frankness*, Messrs Dutton, we receive also a uniform edition of Mr. Whibley's *Book of Scoundrels*, issued at the same price (\$1.50).

....The acidulous Jules Lemaitre has added some brilliant pages to the great mass of French literature about Chateaubriand in the volume to which he gives "the Charmer's" name (Paris: Calmann-Lévy; 3 francs 50). The ten chapters which compose the book were read at the Société des Conférences in the Boulevard Saint-Germain last winter as lectures: M. Lemaitre having succeeded the late Ferdinand Brunetière as lecturer. A fair notion of the academician's manner is given by this passage from the third page of the book:

"On September 4, 1768, was born, at St. Malo, in a dark and narrow street, called the Street of the Jews, the Chevalier François-Auguste de Chateaubriand. 'He was almost dead when he came into the light.' 'The moaning of the waves, excited by a squall, and announcing the autumnal equinox, prevented his cries from being heard. The noise of the tempest was his first cradle song. Heaven seemed to bring together these diverse circumstances to place in his cradle the image of his destinies.' In fine, Chateaubriand was born without any simplification."

Certainly he lived with very little: and he

was always rhetorical. Yet M. Lemaitre's railing tone suggests that Chateaubriand's account of his birth (reproduced from the "Mémoires d'Outre-tombe") was entirely imaginative: whereas the famous night was just as stormy (at St. Malo) as he represents it. Chateaubriand's sin (if sin it is) is giving the effect that nature provided the storm in honor of his coming "into the light." M. Lemaitre professes to love Chateaubriand, tho he cannot respect him. His "love" proves no embarrassment to the brilliant, cynical and caustic annotator.

....August Strindberg, who died at Stockholm on May 14, was famous as a novelist and dramatist in Scandinavia, Germany and France. In recent years he has become fairly well known in this country also, and his play "The Father" was attempted during the present season at a New York theater. Strindberg was born in 1849, and passed thru many vicissitudes, working for a time as schoolmaster, theatrical supernumerary and doctor's assistant. His experience in this last capacity suggests a parallel with Ibsen, who once worked in a chemist's shop; and it is said that Ibsen, in talking to Schering (who translated Strindberg into German) pointed to a photograph of the Swedish author with the words: "Here is one who will be greater than I." This is the only recorded instance of Ibsen being too modest.

....Strindberg was a prolific writer during many years of partial sanity. He was only thirty when his attack upon society in the form of a novel, "The Red Room," made a name for him. The "Swedish Ibsen" outgrew in great measure his atheism and cult of lawlessness. Socialism, Nietzscheism and Catholicism attracted him at different periods. A misogynist, he certainly had opportunities for studying women, since he married three times—unhappily in each case. A hint of his suspicion, where women are concerned, is found in his play in four acts, called with slight justification a comedy, *There Are Crimes and Crimes*. This play is "Rausch" (Intoxication) in the German translation; "Comrades" is the title by which it is known in England. The new version is the work of Edwin Björkman (Scribner; 75 cents). Treating of artist-life in Paris, it discusses the relations of the sexes where the marriage tie is replaced by one that shares many of its inconveniences, but not its legal or religious sanction. Perhaps Mr. Björkman is justified in writing that Strindberg "is first and last, and has always been, a moralist," but this moralist who created his best work between spells of madness has little to teach the world, either of life or of technic.

Pebbles

A PESSIMIST is one to whom "Swat the fly!" sounds louder than "Play ball!"—Logan (W. Va.) *Banner*.

A LAKE of boiling mud has been discovered in Java. Still, Baltimore is to have the Democratic national convention.—*Cleveland Leader*.

AN ALLEGORY.

There once were two cats in Kilkenny,
And each cat thought that there was one cat
too many,
And they scratched and they fit and they tore
and they bit,
'Til instead of two cats—there weren't any.

"Oh, mother," sobbed the young wife, "I've discovered that John doesn't trust me."

"Why, my child, what has he done?"

"Well, you know, I cooked my first dinner for him today and he invited a friend to dine with him."

The sobs broke out afresh. "And, oh, mother, the man he invited was a doctor!"—*Pathfinder*.

THE little maid gazed thoughtfully at her father. "Papa," she said, "do you know what I'm going to give you for your birthday?"

"No, dear," he answered. "Tell me."

"A nice new china shaving-mug, with gold flowers all around," said the little maid.

"But, my dear," explained her mother, "papa has a nice one, just like that, already."

"No, he hasn't," the little daughter answered, thoughtfully, "'cos—'cos—I've just dropped it!"—*Newark Star*.

SAY THIS QUICKLY.

Betty Botter bought some butter.

"But," she said, "this butter's bitter;

If I put it in my batter,

It will make my batter bitter.

But if a bit of better butter

Will but make my batter better."

So she bought a bit o' butter

Better than the bitter butter,

And made her bitter batter better.

So 'twas better Betty Botter

Bought a bit of better butter.

—*Tit-Bits*

"You ought to have seen Mr. Marshall when he called upon Dolly the other night," remarked Johnny to his sister's young man, who was taking tea with the family. "I tell you he looked fine sitting there alongside of her with his arm—"

"Johnny!" gasped his sister, her face the color of a boiled lobster.

"Well, so he did," persisted Johnny. "He had his arm—"

"John!" screamed his mother frantically.

"Why," whined the boy, "I was—"

"John," said his father sternly, "leave the room!"

And Johnny left, crying as he went: "I was only going to say that he had his army clothes on."—*Ladies' Home Journal*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

The Contests at Chicago

IN two days of last week the Republican National Committee, at Chicago, heard testimony and made decisions affecting seventy-two contested seats. At the request of Mr. Taft, and not in accordance with the usual practice, publicity was given to the proceedings. Representatives of the press associations were admitted, and long reports were telegraphed to the newspapers of the country. It was known that a majority of the members of the committee were in favor of the nomination of Mr. Taft. He and they decided that there must be no ground for a complaint from Mr. Roosevelt about votes cast against him in secret session. And so the testimony and the lawyers' arguments were reported and published by the press.

In all of the seventy-two cases the committee's decision was in favor of the Taft delegates. In almost all the vote was unanimous, altho a test vote in one of them showed that at least fifteen of the fifty-three members of the committee were Roosevelt men. With respect to twenty-two of the twenty-four Alabama seats there was a unanimous vote: there

was opposition in the case of two (from the Ninth District), the committee vote being thirty-eight to fifteen. Nearly all, or about nine-tenths, of the decisions in seventy-two cases were made by unanimous vote. In the case of one Arkansas district, two stood for the Roosevelt delegates and forty-nine against them.

The truth is, so far as we can learn, that the Roosevelt contests had so flimsy a basis and were so ridiculous that not even the avowed Roosevelt men in the committee could support them. They were surprised to see such cases seriously presented for their consideration. Senator Borah, a member of the committee, is counted as a Roosevelt man. We find several newspapers ascribing to him the remark that of all the seventy-two contests made in the interest of Mr. Roosevelt, only two had a show of merit.

It is generally understood that these and other contests affecting the seats of Southern delegates were due to the labors of Ormsby McHarg, who has recently spent much time in the Southern States, to promote there Mr. Roosevelt's interests. When it was proposed that Senator Root should be temporary chairman, Mr. McHarg protested, saying:

"We propose to organize the convention along lines that would not be at all comfortable for Senator Root as presiding officer. That convention must have as chairman a man who is in accord with Colonel Roosevelt's views and policies, and that means it must be some one other than Senator Root. It is obviously impossible to have a chairman delivering a keynote speech who is out of sympathy with Colonel Roosevelt and the Progressive cause. There is no other side to that question."

But the same Ormsby McHarg had said in a published statement, in November, 1910, just before the election in New York:

"My Republicanism is the kind that is bred in the bone, but I cannot vote for Theodore Roosevelt. Although he professes to be the leader of the Republican party, he is not a Republican, according to my idea of one. He is doing everything in his power to undermine President Taft, and is working all the time for the nomination for President in 1912.

"He is the most dangerous figure in public life in America, and if he should be elected President we should have hard work to get him out of the White House again. I believe the time to vote against him is next Tuesday, and that is what I propose to do."

This, however, was said before his profitable attorney's contract with the Choctaw Indians was canceled by President Taft, upon the recommendation of a Congressional committee and the Secretary of the Interior.

After the Alabama decisions, Mr. Roosevelt said he had not expected more than two delegates from that State. But he and the manager of his campaign had for a long time been publicly claiming the entire twenty-four, and the Associated Press report shows that Mr. McHarg, representing his interests, appeared before the committee as counsel and argued for the acceptance of all the twenty-four Roosevelt contestants. Mr. Roosevelt, complaining about the loss of two in the Ninth Alabama District, said that officials had been sent to the penitentiary for deeds not a whit worse than the action of the committee. But he said nothing about nearly seventy contests in which the Roosevelt case was so weak that his friends in the committee had to turn their backs to it. Ought there to be no punishment, by public opinion or otherwise, for persons who manufacture such contests?

We suspect that the Alabama and Arkansas cases are typical, and that the committee—proceeding deliberately and in the presence of press stenographers—after taking testimony and hearing the arguments of Mr. McHarg will reject many other Roosevelt contestants.

The Way of the Conventions

EVERY citizen knows that he never votes in November for a President. He votes only for Electors, who will elect a President. This is a fiction put into the Constitution when it was really thought that wisely chosen Electors would have freedom of choice. They have none, as they meet already pledged for a candidate designated and imposed upon them. They need not be wise men; dummies would do just as well.

Therefore party conventions to select the nominees of the parties. The dummy Electors are, under the Constitution, equal for each State to the total number of its Senators and Representatives in Congress. Thus Wyoming has three,

because it has two Senators and but one Representative; populous States have more Representatives, and therefore more Electors. For the nominating conventions the number of delegates is for each State double that of its Electors; thus Wyoming has six. For the sake of courtesy and keeping up party life, six delegates each are admitted from the District of Columbia, Hawaii, Alaska, Porto Rico and the Philippines, altho their residents have no vote for President.

The delegates to the Presidential conventions are chosen by Congressional districts, two from each, and four "at large" by the State as a whole to represent the two Senators; an equal number of alternates are also designated. Until this year they have been chosen by delegated conventions, whether of the several Congressional districts within the State or at a State convention; but under new laws in certain States this year they have been chosen by the direct vote of the registered members of the parties under what is called the direct primary system. Whether chosen by the direct primary system or by delegated conventions, the preferred candidates for the Presidency are before the voter, and the delegates to the Presidential conventions, of the parties go with a full understanding whom they will vote for. They may be absolutely pledged to their chosen candidate, or they may go unpledged, allowed, when they meet in convention, to cast their votes as seems wise. The delegates from a State may be required to vote as a unit, or they may be permitted to vote individually. Yet any delegate can disregard instructions, for his vote is his own. This may be done corruptly, and any one who does it will be under suspicion unless the political reason is evident.

The Presidential convention will meet in a large city where there is abundant hotel accommodation for the delegates and the adherents of the candidates, who attend in multitudes, and in an immense hall. A week or more before the meeting of the convention, the national committee of the party meets there to prepare for it, and particularly to provide a preliminary roll of the voting members.

There will be contesting delegations from some States, and the national committee will hear their claims and decide which has the right of admission; but the convention when it meets will have the right to reverse the decision of the national committee, altho this will seldom be done. This national committee has held over from the previous national convention.

When the convention meets on the appointed day in June or July, the State delegations find their seats assigned to them, and each has its chosen leader. The convention is called to order by the chairman of the national committee, and a temporary chairman previously agreed upon is nominated and elected. He makes a short speech and then the secretaries and clerks are appointed, and the committees, particularly those on credentials and platform. Their names have already been selected by the national committee, and they usually go thru with no opposition. Indeed, the credentials have been already acted on by the national committee, but may be reconsidered. The platform has already been drafted by shrewd leaders. After these appointments the convention adjourns for the day.

At the second session, after the customary prayer by a local clergyman, the permanent chairman is appointed, who begins his duties with an elaborate speech. The platform is then read, if agreed upon, and amendments are allowed. The platform praises the past administration of the party, if it has been in power, or condemns it if not in power, and tells what are the measures to which the party will be pledged in the coming campaign. On points on which there is difference in the party care is required not to offend either faction.

The roll of the States is then called for nominations. When a State is called whose delegation is to present a candidate, the chosen speaker mounts the platform and makes a fervid nominating address. He describes the candidate's qualifications, but avoids mentioning his name, which everybody anticipates, until the culminating point, when the candidate's supporters break into riotous applause, which may continue for an hour,

with shouting, marching, band-playing and every show of enthusiasm. This scene may be repeated when other candidates' names are thus presented. One or two other speakers may second each nomination.

When the nominations are concluded the voting begins. The chairman calls for Alabama and ends with Wyoming. The chairman of the State delegation rises and gives the vote of his State, whether his delegation votes solid or not. If the vote thus announced is doubted the delegates are called on to vote individually. Sometimes this first vote will select the party's candidate, but often a number of votes will be required. At the first voting the delegations will do their duty by voting for their special favorite sons, who have little chance of being chosen, and who can be discarded in the trading that will come later. If no candidate has a majority in the Republican convention, or the two-thirds required in the Democratic convention, a second vote is taken, and as many more as may be necessary, even if it takes several days. Now is the time for consultations between delegations, with a view to combinations and persuasions, until a majority, or in the case of the Democratic convention, two-thirds are agreed on a candidate. Now is the time to bring in a "dark horse," if no persuasion can bring over the delegates to choose one of the leading candidates. He will be some one known to all to be of respectable character, who has aroused no antagonisms. When the party candidate has been finally chosen, the spokesmen for the other candidates move to make the choice unanimous, following a season of noisy jubilation, and the weary convention, with little trouble or delay, selects a candidate for the Vice-Presidency, perhaps an unsuccessful candidate, or some one whose choice will placate the defeated faction, and the convention adjourns. For a few days the newspapers are full of the story, but the vacation period is on, the country quiets down after the nominations of the two leading parties are made, and rests until the middle of September opens the campaign, which ends with the election on the first Tuesday in November.

One of the Democratic Candidates

IN the Democratic National Convention a two-thirds vote (729) will be required for a nomination. It will be admitted, we think, that no one whom Mr. Bryan has vigorously, persistently and even bitterly opposed will be nominated. The man whom his party has honored by placing his name three times at the head of its ticket has so considerable a following that his views will be accepted by at least one-third of the convention. He is to be in the convention as a delegate. Mr. Bryan's disapproval probably excludes Governor Harmon. We may say that it also excludes Representative Underwood. But each of these men has only a small number of delegates. The leaders in the canvass are Speaker Clark and Governor Wilson. Mr. Clark is at the head of the list, but the Governor is not far behind him. Still, it is not probable that either will have on the first ballot even a majority of the convention. And two-thirds of the delegates will be required.

Mr. Clark is a man of engaging personality, who has in recent years become prominent as a party leader in the House. Apparently there are a great many Democrats, in the East as well as in the West, who think that with him as its nominee the party could carry those so-called doubtful States whose electoral votes must be added to those of the South if the party is to be successful. We shall not undertake now to make an analysis of election returns, but shall say that three of the States we have in mind are New York, New Jersey and Connecticut. Others are Ohio, Indiana and Massachusetts. If the Democratic party can add the first three to the South it will need only a few more votes, and success in those three States would make it easy to find them elsewhere.

It is now expected that Mr. Clark will go to the convention with almost a majority and with more delegates than any other candidate can show. Having been in public life for many years he has a record. We shall quote a few of his remarks. The memory of the late Grover Cleveland is greatly respected in the three States we first mentioned. Of him Mr. Clark said in the House:

"There are but two men in all the hoary registers of time that Cleveland's name ought to be associated with—Judas Iscariot and Benedict Arnold. Shades of Arnold, forgive the profanation! Upon reflection, I think really I ought to beg the pardon of Judas Iscariot, because after his treason he did have the grace to go out and hang himself."

Mr. Cleveland, he also asserted, was "not a Democrat," had never been a Democrat, but being "the tool of the plutocrats," had masqueraded as a Democrat. He had been "the best friend the Republican party ever had," and had "played a colossal bunco game on the Democratic party." He had "held it in his pudgy fist to keep the party in power for a quarter of a century," but had "stolen the livery of heaven to serve the devil in."

It seems unnecessary to say that this part of Mr. Clark's record would not be cited to his political advantage in New York, New Jersey and Connecticut. There are other States where it would repel many voters whose support the party needs.

His unfavorable opinion as to what is called the merit system in the civil service—the fruit of civil service reform—was repeatedly and forcibly expressed. He called it "the greatest and most monumental fraud ever adopted or proposed in a civilized country," and added:

"We want true civil service accomplished by placing only Democrats on guard from Martha's Vineyard to the Aleutian Islands, and from the Lake of the Woods to the Dry Tortugas."

The scope of this was not quite so broad as that which he would give to the Monroe Doctrine:

"Congress should formulate the Monroe Doctrine as we now understand it and it should be in words about as follows: 'The American Republic hereby takes all of North America, Central America, South America, and all the islands of the adjacent seas under the shadow of her protecting wing, guarantees to them any form of government they choose, and warns Europe, Asia and Africa to keep their hands off the Western Hemisphere on the penalty of being thrashed within an inch of their lives.'"

It will be observed that he included Canada. The opinion about Canada which he expressed during the recent reciprocity debate had been held by him for a long time. Nine years ago, when sup-

porting the bill for reciprocity with Cuba, he said:

"I am in favor of this bill because there are two pieces of ground on the North American continent that I want to see annexed to the United States. One is Cuba, and the other is every foot of the British North American possessions, no matter how far north they extend."

We should add that he also said he was not in favor of annexing them by force:

"I am not in favor of conquering them. There is no reason why they should be conquered, and if we act with any sense they will come to us peaceably, and this bill is a step in the right direction."

At times he has suggested a violent and extremely radical way of reforming the tariff, as when he said:

"The gentleman from North Carolina asserted that I would destroy every custom-house in America. He is entirely correct. If I had my way today, sir, I would tear them all down, from turret to foundation stone, for from the beginning they have been nothing but dens of robbers."

We recall his desire for the "abolition of the Diplomatic Corps," and we do not forget his many earnest speeches in favor of the free coinage of silver, one of which ended as follows:

"My brethren, the magnificent silver-white steed stands pawing impatiently at our gates. Let us vault into the saddle and ride him into the realm of unfailing prosperity, amid the benedictions of a grateful people."

If Mr. Clark should be nominated, his campaign addresses would have an entertaining flavor. Undoubtedly he would defend his record, to a part of which we have referred, and would add something to it. Democrats who are now supporting his candidacy should ask themselves whether the record already made has their approval, and whether it would draw to a Clark ticket, in the doubtful States, the votes of those thoughtful independents whose aid the party will need.

Intervention in Cuba

WE take it for granted, as we have previously said, that there will be no intervention in Mexico; but Cuba offers a different proposition. The conditions in that island during the past week have not improved, and the reports are so disquieting that President Taft has been

obliged to give a new warning to the Cuban President that unless the disturbances are speedily put down he will be obliged to send soldiers as well as the marines already landed and assume the government. No soldiers have as yet been sent, but they are ready to go on an hour's notice, and more ships of war and more marines are already in Cuban harbors.

President Gomez has shown no little verbal earnestness, but no real vigor. It is likely that the reason for his failure to act with vigor is the lack of funds. The treasury is utterly exhausted thru extravagant and corrupt contracts and expenditures, so that it is impossible to pay current bills, altho the receipts from imports are quite sufficient to carry on the government in an honest way. The negroes who are in rebellion, particularly in the Oriente Province, demand simply the recognition that was promised them when Gomez became President, but which has never been given. Their leader claims that this is not a negro uprising, for many white men are connected with it. This is true, after the Cuban definition of a white man, which embraces those of mixt blood. They call a man white in Cuba who is not pure black, while we call a man black who is not pure white.

Very few Cubans, white or black, desire that the United States should take possession of the island. It was not so a few years ago, before the last intervention, but under Governor Magoon's administration Cuba incurred a great debt, and President Gomez has made things worse still, so that now there are few who would choose American intervention, having the notion that there would be as much graft under one control as under the other. But Americans who hold very large interests in Cuba believe that there would at least be peace, and that the graft would be less erratic than under any one of the Cuban parties.

We do not believe that annexation would duplicate the administration under Governor Magoon. The Government of Porto Rico is fairly satisfactory; and the island is prosperous. Indeed it is not necessary for the regeneration of Cuba that it should be annexed. It is enough that the island, remaining nominally in-

dependent, should be under American protection, but that there should be appointed an American in control of the treasury, as is the case in Santo Domingo, or as was the case with Persia under Mr. Shuster. Then there would be no such opportunity for graft and no provocation for seditious uprisings. Ultimately Cuba should, like Porto Rico, be absolute American territory, but for the present it may be as well that the island be allowed yet another chance to preserve relative autonomy, but with a firm control of its exchequer. Were Mr. Roosevelt President we presume annexation would not be delayed three months.

Dr. Sun Yat-Sen

WE trust that not one of our thoughtful readers—and it is such readers that we value and seek—will fail to read and ponder the extraordinary address by Dr. Sun Yat-sen which we print in this issue.

Dr. Sun Yat-sen is one of the world's most historic men. By consent of Chinese belief it is he that has overturned the old Manchu rule of centuries, and, more than that, has replaced by a modern republic the imperial government of thousands of years. He has done it in the simplest, most original and yet most ideal way, not by leading an army, not having ever commanded even a single company of soldiers, and with the slightest effusion of blood; just by going about for years in China, among the Chinese of this country, consorting with the Chinese students in Japan, talking to them, of human rights. So quietly did he do this that the outside world did not know that such a man existed; and yet he was undermining the very foundations of the ancient evil institutions of the nation and re-establishing them on the new foundation of equal rights for all men. Incredible would have seemed the purpose, if we had known of it, and yet it succeeded; and when this house of cards, these walls of Jericho, fell down, by universal acclaim this unheralded, insignificant, unknown dreamer, this impractical reformer, was made first President of the new Republic of China. Others had done the visible work of overthrow, but his was the inspiration,

his the dynamic, ethereal current that had conveyed the compelling message all over the twenty-two provinces of China.

Then he was elected the leader of the successful republic; and then he resigned. Why? This address tells us.

He has a yet greater task on hand. He would not only create the republic, he would create the new social institutions of the country. He sees not only the wrongs of imperial tyranny, but the evils which endanger the civilizations of the West, and he would escape them. The perils of accumulated wealth and galling poverty he has observed in Europe and America, and he would teach a better way to his own people. Our civilization is seething with the passion of class hatred. We call it the "unrest" of the working people, who are threatening by violence to seize the reins of government, to destroy old vested rights, to deny the claims of property to rule, and, we fear, to raise a civil war whose end we cannot guess. Can it be that our boasted civilization rests on double foundations of sand and rock, on both democracy and plutocracy, on principles that in the end will be found inconsistent, unstable, and that must involve disaster to the civilization that rests upon the two?

So Dr. Sun believes. Such danger has he seen in these Western lands, and this danger he would avoid for his new republic. What we cannot reform without civil war, perhaps, he would have China guard against at the very beginning. Can she not, he says, give the republic a real democracy which has in it setting before them the lessons of patriotism and teaching them the principles no danger of rule by selfish wealth? There have been various suggestions, made by sociologist reformers, but, with our huge and powerful vested interests, it seems almost impossible to make them practical. Some would see in the division of land and the assumption by the state of the unearned increment a way to curb the monstrous growth of individual wealth; and this Dr. Sun Yat-sen seems to have in mind. The way of Socialism he may also consider, and the ownership of the soil by the people at large. Others have thought to limit the amount of wealth which can be trans-

mitted by will or gift to one's children or successors, or to a trust in their favor. It is in such ways, or in other ways, that just now, at this critical time, Dr. Sun Yat-sen would fix the new institutions that will save China from the convulsions that threaten us of the West. He leaves the task of preserving order for the present to men of iron, to Yuan Shih-kai and his advisers, and gives himself to the larger task, a task of long outlook, which shall have permanent value. He is not a ruler; he is a statesman and philosopher. He does not care to rule; he would discover the basic principles and mold the lasting institutions which will create a prosperous and contented nation.

Such has been, and is, his double task, to create the republic, and to create a social order that shall make the republic secure. We honor our Washington, who led the armies which achieved our independence, who was the first President of these United States, and who taught the feeble nation to avoid entangling alliances. Greece honored Solon, who gave her laws and institutions. It is not ambition, not the love of personal glory, but pure patriotism and extraordinary wisdom, which made this Chinese statesman seek the regeneration of his country not by arms, but by the dissemination of ideas, and who lays down the display of power that he may again go about, a new Solon, a new Confucius, telling rulers how they should master greed and assure a contented people.

The Korean Christian Arrests

THE careful reading of the full correspondence between the Presbyterian missionaries in Korea and the Presbyterian Board in New York, on the one side, and the Japanese Ambassador in Washington and the Governor-General of Korea, on the other side, produces a very unpleasant impression on the mind. This correspondence is voluminous, and has not been published in full. We gather from it that the missionaries believe that some six thousand members of the Christian churches in Korea have been arrested and imprisoned for months without trial, and numbers of them tortured, to compel confessions that they have been engaged in a conspiracy to

murder Governor-General Terauchi, and that among these men arrested are the leaders and teachers in the Presbyterian churches, men of high character, whose influence has been for loyal acceptance of the Japanese Government.

The Japanese authorities do not admit that any such number have been arrested, but they do believe there was such a plot and that its center was in the Presbyterian mission of Northern Japan; and Governor Terauchi says that out of fifty persons transferred to the Public Prosecutor's office by the police authorities for trial forty-three belong to the Presbyterian Church, four to other Christian denominations, and only three are non-Christians. The charges of torture he denies.

The conclusion we are inclined to draw is that a certain antecedent prejudice against Christian missions in Korea naturally arose in the Japanese Government because of the active part taken by one missionary in favor of Korean independence at the time when Japan took possession after the war with Russia. That missionary withdrew, or was withdrawn, from Korea; and the mission body as a whole has been quite loyal to the new government. But we presume that the great influx of Korean converts before formal annexation was augmented by a large number of Koreans who professed themselves Christians and who joined the Young Men's Christian Association (to which the Government now gives \$5,000 a year) to make it a cover for political purposes against Japan. Many of these withdrew from the churches after annexation, and we have heard nothing of late of the effort for "a million converts in the year." But the missionaries and the Korean pastors generally strongly supported loyal acceptance of Japanese rule and did much to quiet the opposition. Yet the Koreans' resistance showed itself in the assassination of Prince Ito, and it was not strange that his successor as Governor-General was General Terauchi, the head of the Japanese army. It was natural that the Japanese authorities should be suspicious and watchful, and not strange that they should suspect the Christians of secret plottings.

The military gendarmerie, rather than the civil department, was responsible for

detective work and for order, and there were gifts and honors for those who were successful in ferreting out political designs. It is quite possible that the gendarmerie did not confine themselves to the lawful civilized procedures prevailing in Japan, and that arbitrary and unjust arrests were made on false evidence, and that there were cases of torture to compel confessions, as under the old Korean procedure, is not improbable. Evidently the missionaries who are in the closest sympathetic touch with their people so believe. It is pleasant to learn that in the case of fifty prisoners whom one missionary was allowed to visit he found them in good health and not tortured. It is to be hoped that the trials will be hastened after the long delay, and the guilty punished, the innocent freed, and conditions revert to those of confidence and peace. We have sufficient faith in Japanese justice to believe that this will be the case.

William J. Bryan We are so near the time of the Republican convention that it is not worth while to forecast the result further than to say that it looks likely that Mr. Taft will be nominated by a small majority, against a disgruntled minority. While we do not anticipate a bolt and a new party, the chances of Mr. Taft's re-election—or of Mr. Roosevelt, if nominated—do not look very bright. It is hardly likely that either Governor Wilson or Speaker Clark can receive a two-thirds vote in the convention. That would send the delegates after a "dark horse," and he is in the convention as a delegate, and in every one's mind, Mr. Bryan. If Mr. Taft is the Republican nominee, as seems likely, a progressive will be sought by the Democrats, and with Governor Wilson and Speaker Clark eliminated, whom can the choice fall upon but Mr. Bryan, who has equally favored both of them? Harmon and Underwood will both be impossible. He has not intimated that he will be a candidate, but he does not need to. There he is; behold him for yourselves. He has acted wisely during these late months, has gotten over his "cross of gold" folly, and has kept himself in the eye of his

party, while refusing to be a candidate. His method may prove more successful than that of Mr. Roosevelt.

More Church Union The recent quadrennial meeting of the Methodist Protestant General Conference made it probable that there would be a union of that body with the United Brethren, which would assure a denomination of over half a million members. We had no faith that the negotiations of the Methodist Protestants with the Methodist Episcopal Church could result successfully, and the General Conference ended them. There are strong committees of the two former bodies at work over the conditions of union, and it is greatly to be hoped that they will succeed. But we wish the two denominations could call speedy extra meetings of their two General Conferences at the same place and agree to conclude the union which both desire, which is the main thing, and then arrange the minor unimportant details later. We observe that next year the Northern Presbyterians, the United Presbyterians and the Associate Reformed Presbyterians are to hold their General Assemblies in Atlanta, Ga., which would afford an excellent opportunity for the three denominations to agree to unite in one. We are sure that the Congregationalists regret that the opportunity they had to form a union with the United Brethren and Methodist Protestants was so ruthlessly thrown away in Cleveland five years ago.

Mr. Carnegie as Rector Mr. Carnegie's rectorial address to the students of Aberdeen University who elected him, is printed in good simplified spelling, somewhat more advanced than what we venture to adopt, but to which we make no criticism, unless it be of "mity" (mighty), instead of *mity*, and "quartette" for *quartet*. "Concensus" for *consensus* we take to be something not so good as simplified spelling. It has been a usual thing in such an address to discuss topics that would be more interesting to the professors and distinguished visitors, but

Mr. Carnegie very wisely address the students, giving them excellent advice. We note his very positive advice that young men intending to go into business should neither drink alcoholic liquors nor smoke tobacco. He puts it thus quaintly: "Remain teetotalers until you have become millionaires"; and, again: "The young man who drinks or smokes voluntarily handicaps himself in the race of life"; and, again: "If there were two candidates for promotion equally matched, and one smoked and the other did not, the latter would be preferred as less extravagant and more sensible." These statements are indubitably true, and yet in this country college graduates call their reunions "smokers"! Mr. Carnegie believes that rich men should be required to pay heavy taxes:

"While an income tax may have some serious but still not overwhelming objections, there is no objection whatever to one-half of the millionaire's hoard being taken by the State at his death."

He does not hesitate to condemn the British primogeniture system, the orders of nobility, the plural voting and the Established Church, all given up by the British colonies as well as by the United States. Altho the reading of the address was accompanied and followed by the customary noisy rowdyism, the speaker was most warmly cheered by the students.

It is very true that **Women as Pastors** Saint Paul did not allow women to speak in a religious meeting or to usurp authority over the man; and we suppose that may be quoted as a prohibition against women being ordained as pastors of churches. We know of no other fair reason that can be given for the decision of the Presbyterian General Assembly last week that it is not expedient that a woman be ordained as pastor. We do know that dozens, or hundreds, of women do act as pastors in evangelical churches in this country and serve in that capacity to great satisfaction, Paul to the contrary notwithstanding. But Paul does not now forbid it. He only forbade it then. Even Presbyterians, who are generally fairly strict in their acceptance of inspiration, do not interpret his command as binding on the matter

of teaching. They allow women to teach men in the Sunday-school, in mixed colleges, in foreign missions, and in a multitude of ways. What Paul taught was not a religious principle, but a local conventionality, due to the condition of Greek civilization. We have grown out of that, and Paul's teaching on the subject is no longer binding on us. If Paul lived now he would speak very differently to us from what he spoke to Timothy at Ephesus. And, indeed, it is not clear that Paul was quite consistent in this matter, for he allowed the women of Corinth to pray and prophesy in public if they were sufficiently modest about it to have the head covered and to wear long hair; and one that can pray and prophesy to edification is half fitted for the pastoral office. But the General Assembly did not say that the Bible forbids women to be ordained, but only that it is now "inexpedient." That is mild language, and it may yet be found expedient.

It is often said that Columbia University and the higher education of this city has gone into the hands of Jews and others of foreign parentage; and this is supported by the gibe of President and Governor Woodrow Wilson to President Butler on the latter's short hours of sleep: "He that watcheth over Israel shall neither slumber nor sleep." But one has only to run down the list of the 1,479 graduates of Columbia University last week to see that the old American race is not outnumbered by Jews or by foreigners. Of the first 100 names in the alphabetical list of bachelors in art and science we count sixty names that are plainly English, and forty that may be foreign, including such German names as Hinrichs, Mayer and Meyer, which have long been naturalized, and certain names originally Irish or Scotch thrown in for good measure. The names of the women graduates of Barnard and the Teachers' College run in about the same proportion, so that we may be proud of the old stock, and no less of the new which reinforces it.

It is not quite clear that the Presbyterian General Assembly did the proper thing in revoking its election of Secre-

tary Wilson, of the Department of Agriculture, to be one of its representatives to the Pan-Presbyterian Council because he had accepted the honorary presidency of the Brewers' Congress last year. We believe the brewers' business is in this country, and ought to be in Europe, a disreputable one, and that Secretary Wilson ought not to have given it his apparent indorsement; but that is a question on which good people differ, particularly in Europe. We do not doubt that Secretary Wilson accepted the honor conscientiously and thought it his duty, since beer is a product of barley and hops, agricultural products. It is no worse to be associated in a brewers' congress than it is to raise barley to be sold to brewers, and we do not recall that the Presbyterians have ever instructed their members not to raise barley or hops.

The war of Italy with Turkey has taken a new phase, that of the seizure of nearly a dozen undefended small Turkish islands that Greece would hope to get one of these days. We judge the plan is to hold something to be given up in exchange for Tripoli's annexation. Yet it may be that they will remain in Italy's hands, which is what neither France nor Great Britain would like, for in the case of a general European war they would supply a fine naval base for the Triple Alliance if still held by Italy.

Mr. Ismay may not have liked his experience with the Senatorial committee, but the British Commission has been severer with him, and he has admitted that he believes that the full speed was right, and that he left the sinking ship knowing that there were many passengers for whom no boats were available. That Mr. Ismay approved full speed into the ice belt is an explanation of Captain Smith's course.

The English papers have been filled for weeks with columns of correspondence on the case of Miss Kate Malecka, a naturalized British subject, who had been condemned to four years' penal servitude for aiding Polish revolutionists. The intervention of the British Government has

secured her release on condition that she leave Russia never to return. It is the suspicion that Russian courts and prisons are behind the age which accounts for the excitement over her case.

There might be a certain advantage in the success of the hotel waiters' strike which is spreading from New York to neighboring cities. Were the waiters to gain increased wages such as their not very intellectual work deserves, the patrons need not feel themselves obliged to give tips any longer. The waiters are the very head and center of the tip nuisance, and the end of it would advance the golden age.

Congressman Berger, Socialist, would impeach Judge Hanford, of Seattle, for revoking the naturalization papers of a Swede because he obtained them by fraud, not having admitted that he was opposed to the government of the country. Whether Judge Hanford is justified is not clear. If Olsen was merely a Socialist he was wrong; but if he was an anarchist, not believing in government, then Judge Hanford was right.

The stopping of the Boston trolley service in part by a strike suggests the question whether public ownership of the trolleys would not be a desirable cure of this evil. The public has the right to travel, and if the street car companies and their employees will not agree to care for the public the public may be provoked to take possession.

It is computed that there are three million more women than men in this country who are church members. An attempt has been made to account for this by saying that there are three million more men engaged in work which does not allow them to attend church than there are women. We fear there is a flaw in this defense.

We take pleasure in approving the plan for an exposition in charge of negroes for the celebration of the semi-centennial of emancipation, and we trust that the House will adopt the bill approved by the Senate to give it aid under reasonable conditions.

Legal Execution Voids Life Policies

MR. WILLIAM B. ELLISON, a prominent lawyer of New York City, and one particularly interested in the legal aspects of insurance matters, recently commented publicly on the decision of the Supreme Court of the United States in the case of McCue vs. The Northwestern Mutual Life Insurance Company, observing that the finding is of great importance and may be found applicable to a variety of conditions possibly not contemplated by the court.

As we recollect the circumstances out of which this litigation grew, McCue was a leading business man in and the mayor of one of the second-class cities of Virginia, prosperous and seemingly happy in his family, which consisted of his wife and several small children. McCue was eventually charged with, convicted of and hanged for the murder of his wife.

In the case under discussion the policy was for \$15,000, and altho it contained no provision excepting legal execution as a manner of death, it has been held void by the Supreme Court on the ground that public policy forbids the enforcement of a contract under circumstances which cannot be lawfully stipulated for. The legal fiction interwoven herein is to the effect that there is an implied obligation on the part of an insured under a life insurance policy to do nothing to wrongfully accelerate its maturity.

Commenting on the general effect of the decision, Mr. Ellison says, very correctly, as we see it:

"Were we to apply the arguments of the court to cases of suicide, it becomes apparent that the consequences may be very serious. Suicide is certainly contrary to public policy, and in many States is a crime. It does not seem unreasonable to argue, therefore, that in States where suicide is a crime, at any rate, life insurance policies are avoided thereby, even though such policies contain provisions seeking to make them incontestable by reason thereof. The Supreme Court apparently has laid down the proposition that contracts expressly, or which in effect, are violative of

public policy, are not enforceable, and provisions or agreements to the contrary are void."

There is one feature of the case which has not been touched upon in such public discussions as it has received, altho it was doubtless covered in the course of the various arguments made in the courts. McCue's children are the beneficiaries under the policy, either as his or their mother's heirs. They are not offenders. On the contrary, they are the innocent victims of the misfortunes which overwhelmed their family. The fruits of a life insurance policy constitute at least a part of the estate of the man who has maintained it. He cannot himself profit by hastening his own death, whatever the means resorted to, lawful or unlawful. To interdict the payment of part of an estate because its late owner forfeited his life to the State as a penalty for crime, closely resembles the system of forfeitures exacted under the old English law after conviction and execution for treason. In neither case are the survivors of the convict at fault, and yet, in both, the state has carried the penalty beyond the grave and made a portion of it a burden of the innocent.

Under the circumstances, we are of the opinion that life insurance companies should not plead exemption; and from one viewpoint the Illinois Life Insurance Company took the juster, the more humane course in paying the policy it carried on the life of Richeson, who was executed for murder in Massachusetts on May 19 last.

THE average rate of fire insurance in the West is still tending downward, thanks to competition, the shading of tariff rates, the improvement of risks, the multiplicity of fireproof and sprinkled properties and the reduction in rates thereon. One large company, which tabulates its fire insurance premiums, finds that for the first ten months of 1911 the average rate in the Western department has fallen from \$1.05 to 90 cents, following an even greater reduction in 1910.

The Money Trust Inquiry

THOSE banks and similar institutions which decline to answer the questions in the Money Trust committee's letter do so, we suppose, mainly because they believe that a bank's confidential relations with its depositors and customers should be guarded and preserved. Depositors and borrowers may reasonably object to publicity as to their dealings with a bank, not because there is anything unlawful or unjust in these transactions, but for the reason that publicity might embarrass them in business, especially in their relations with competitors. All this was recognized in the national banking act, which reserved to the Comptroller of the Currency and his agents the right to make such an inquiry as the committee has undertaken. Still, the refusal of so many banks is unfortunate, because it excites suspicion in the public mind that concealment of something hostile to the public interest is sought. It seems to us that the banks and the committee might reach a friendly agreement, as a result of which the committee should get all it needs, and the banks should withhold what really ought not to be made public. The banks should facilitate the inquiry, so far as it concerns anything which can properly be given out.

There can be no sound objection to an investigation of the New York Clearing House Association and Stock Exchange, provided that it is justly and thoroly made. The association has great power, which it has repeatedly exercised for the public good. Last week's testimony indicates that there may have been errors in its long record. Probably it should be incorporated and subjected to regulation by statute and executive authority. This is the opinion of James G. Cannon, a member of its powerful committee of five. We hope that the association, in its own interest, will strive to make the inquiry a complete one. There is an opportunity to lay before the public the history of its good service. At the same time, a thoro investigation will suggest remedies, if there be anything in its

methods or management that can promote injustice. We wish that the inquiry had been undertaken simply to get facts for use in improving our currency and banking system. But it was caused by and based upon the assertions of certain men who hold that the country is ruled and opprest by a few financial monopolists, and that the panic of 1907 was manufactured by these monopolists for their own profit. It does not follow that the committee must support these assertions. It should strive, of course, without bias, to get the facts, and, when so striving, should have the aid of all good bankers.

....Deposits in the 7,866 postal savings bank offices on April 30 amounted to about \$17,200,000.

....In April, Canada received 21,494 immigrants from this country, and it is expected that the number for the entire year will be about 175,000.

....May's pig iron output, 2,512,582 tons, exceeded April's by 137,000 tons, and was larger than that of any preceding month in the last two years.

....Exports of automobiles from this country were \$12,965,049 in the last fiscal year. This year they will be about \$20,000,000, as the total for nine months is \$14,189,948.

....New York State sold \$25,950,000 of 4 per cent. bonds last week. They were in three classes. The average paid for \$20,000,000 of the first class, the term being fifty years, was 100.16.

....The Government's cotton crop report, last week, showed that the condition of the growing plants on May 25 was 78.9 per cent., against 87.8 one year ago, and a ten years' average of 81.5.

....In the last ten years the Pennsylvania Railroad Company has planted more than 4,500,000 trees. Last year, 483,148 forest trees were shipped from the nursery at Morrisville, Pa., to permanent places on the company's land, and 46,508 ornamental trees and shrubs were taken by the several divisions.

The Independent

VOL. LXXII NEW YORK, THURSDAY, JUNE 20, 1912

No. 3316

Survey of the World

National Politics The Republican National Committee completed its contest hearings Saturday night. Of the 254 seats affected, 235 had been given to delegates regarded as supporters of Mr. Taft, and 19 to Roosevelt claimants. The Taft manager claimed 590 votes on the first ballot; others gave Mr. Taft 565, or 25 more than a majority. On the other hand, a majority was claimed by Mr. Roosevelt's friends. A large majority of the committee's decisions had been made by unanimous vote. On Sunday it became known that several men counted for Taft had gone over to Roosevelt, and that others intended to vote for Justice Hughes or Robert T. Lincoln. The most prominent delegate who announced his purpose to vote for Roosevelt was Timothy L. Woodruff, of Brooklyn. But at least 67 of the New York delegates had agreed to stand by Taft. The latter's loss on Sunday is said to have been 19. The Roosevelt managers asserted that they would gain 40 more. It was admitted that Taft could have but very few in excess of a majority, and that the balance of power might be held by La Follette's 36.—At the beginning of last week a committee seated Indiana's four Taft delegates at large and all of that State's contested Taft district delegates (2 excepted) by unanimous vote. The vote in favor of the two excepted Taft men was 36 to 14. This unanimous decision excited much comment because of Mr. Roosevelt's repeated assertion that the Taft delegates in question represented nothing but barefaced fraud which Mr. Taft had approved and encouraged. On the 11th the first of the committee's decisions in favor of a Roosevelt contestant was

made. It related to a Kentucky seat. Mr. Roosevelt published a long statement, hostile to the committee and the Taft leaders. On the 12th it began to be said that Mr. Roosevelt would go to Chicago. Some days earlier he had said that he did not intend to visit the convention, but might do so if it should be necessary. The committee had then decided one case in his favor and 140 in favor of the President. On this day a new kind of bolt was promised by William Flinn of Pittsburgh. If Taft should be nominated, he said, it would be by means of a "stolen roll" of delegates, and the Presidential electors of Pennsylvania would vote in the Electoral College for Roosevelt. The State's Republican convention was in recess, and could be called into session, if necessary. But the electors had been chosen, and 30 of the 38 were Roosevelt men. "It wouldn't be a bolt," he continued, "for we should be the regulars. It might cost the Presidency, but it would help us to elect our Congressmen." Governor Glasscock, of West Virginia, said similar action would be taken in his State. Mr. McKinley, who has charge of the Taft canvass, asserted that men high in the councils of the Roosevelt camp were planning desperate measures, which included attempts to bribe delegates. Seven weeks ago, he added, money had been sent to two Taft instructed delegates by a well-known Roosevelt leader. There was a well-defined effort, he said, to buy the nomination for Roosevelt. There were some bitter controversies at the committee hearings. A letter was read in which Governor Johnson, of California, declined to appear and testify. "I will not," he wrote, "submit to a trial of the title of property by the thief who steals it."

Mr. Roosevelt published another statement, saying the majority of the committee were bolters and were wrecking the party. In the Missouri cases there was a compromise, the result of which was that the Roosevelt men got a majority of the delegation. Plans had been made for a Roosevelt mass meeting, to be held on Friday evening, but the meeting was postponed when it became known that the ex-President was going to Chicago. He arrived Saturday afternoon. Near Tarrytown, N. Y., his train narrowly escaped a bad accident, the locomotive striking a large boulder which boys had rolled from a cliff. "It is a fight against theft," said he, after his arrival, "and the thieves will not win." Charles Banks, a Mississippi negro delegate, sent a long letter to Manager McKinley, returning \$800 which had been given to him for expenses. It appeared that it had been the custom of the national committee to pay the expenses of many Southern delegates, and that this money had been given to him, with \$200 more, for distribution among his associates. Justice Hughes, passing through New York, caused the publication of a statement that he was entirely out of politics and would not permit the use of his name under any

SENATOR JOSEPH M. DIXON

circumstances. This, it was added, must be regarded as final. Mr. Taft said, in a telegram to Secretary Hilles, at Chicago:

"The report that I am in any way considering the possibility of a compromise candidate is wholly unfounded, and you are authorized to deny it emphatically. With confidence I await the judgment of the convention."

Mr. McKinley said that Mr. Roosevelt had come to save the day for himself, but would fail. William Barnes, Jr., the New York chairman, remarked that the ex-President's action was undignified and would be useless. Mr. Roosevelt, he continued, was "under the influence of a delusion that the people whose voices he fancies he hears are calling him to overturn all order. It is a sad and humiliating spectacle." On the 17th, the Taft managers published an affidavit in which F. H. Cook, delegate from Vidalia, La., where he is pastor of the Zion Baptist Church and editor of a newspaper, asserted that on the 13th a man saying he was Mr. Thompson, of Colorado, had offered him \$1,000, holding out the money, if he would desert

WILLIAM BARNES, JR., OF ALBANY

The leader of the New York Republican organization and one of the Taft leaders in the convention fight

Taft and vote for Roosevelt.—There will be only a few contests affecting delegates to the Democratic convention. It is said that Senator O'Gorman will be made director of the campaign. Some are talking of a Bryan and O'Gorman ticket. The votes of Colorado will be cast for Speaker Clark by Mrs. A. R. Pilzer, his sister-in-law, a regularly elected delegate from that State.

Very little will be done by Congress in the coming three weeks, because of the political conventions. There will be successive adjournment for periods of three days each, and only routine business will be considered in the intervening short sessions.—The Senate, by a vote of 27 to 24, in which party lines were broken, concurred with the House in the army bill amendment which virtually legislates General Wood out of the office of Chief of Staff. This amendment would also exclude General Funston and Colonel Goethals from that office. The Senate has also concurred with the House in

The manager of the Taft pre-convention campaign is a member of the House of Representatives from Mr. Taft's own State

WILLIAM FLINN, OF PITTSBURGH

Formerly a member of the Pennsylvania Senate; Senator Penrose's successor as State leader, and a leading representative of Mr. Roosevelt in Pennsylvania. He went to Chicago at Mr. Roosevelt's request to work in his interests.

undertaking to abolish the Commerce Court by withholding an appropriation for it. It is said that the President will veto this bill, and that he is inclined to veto the one aimed at General Wood.—The House has directed that a committee shall investigate, at Seattle and elsewhere, the charges against Judge Hanford.—In the House, the Senate's amendment to the Metal Tariff bill, repealing the Canadian reciprocity act and imposing a general duty on print paper, was rejected. Because the Senate insisted, there is a deadlock.

Labor Controversies When the railroads east of Chicago agreed with their engineers that the wage controversy between them should be settled by arbitration, each side appointed an arbitrator, and five more were to be selected. These have been named by Chief Justice White, Commissioner Neill and Judge Knapp. The full board is as follows:

Oscar Straus, formerly Secretary of Commerce and Labor; Dr. Albert Shaw, editor of the *American Review of Reviews*; Otto

Eidlitz, formerly chairman of the New York Building Trades Employers' Association; Frederick N. Judson, lawyer, of St. Louis; Dr. Charles R. Van Hise, president of the University of Wisconsin; Daniel Willard, president of the Baltimore & Ohio Railroad Company; P. H. Morrissey, formerly president of the Brotherhood of Railroad Trainmen.

Messrs. Willard and Morrissey were the original members. Fifty railroads and 25,000 engineers are directly interested.—In Perth Amboy, N. J., last week, nearly 5,000 employees were on strike. At the beginning there were only 1,000, but the number rapidly increased. The underground cable works, and the plants of the American Smelting and Refining Company, the Barber Asphalt Company and other corporations were affected. Higher wages were demanded. There were almost continuous riots around the factories. Many special officers aided the police. On the 12th several persons were shot, but not fatally injured. On the night of the 14th two strikers were killed, two were mortally wounded, and seven young men not connected with the dispute got bullets in their legs because they crossed a dead line marked by the police.

Panama Canal Tolls

The Panama bill recently passed by the House permits American ships engaged in the coastwise trade to pass thru the canal without paying tolls. By a close vote the Senate committee has reported this bill favorably, adding a provision giving free passage also to American ships engaged in foreign trade, if their owners agree to place them at the service of our Government in time of war. Many Senators hold that such exemption would be a violation of the Hay-Pauncefote treaty. That part of the House bill which excludes ships owned by railroad companies, if the ships ply on routes which are naturally in competition with the railroad lines, has been changed by the Senate committee, which admits ships so owned, if their coastwise business is only incidental to traffic with foreign ports. This would be favorable to the Pacific Mail line.—The revolutionists in Santo Domingo have not been subdued. There was fighting last week in the northern provinces. Congress has passed an immigration bill

providing that only white persons shall be entitled to admission as settlers, altho others may come in if they obtain permission from the Government.—It appears that Frederick P. Shaw, the New York lawyer recently killed in Honduras, was shot by C. B. Van Sickler, an American formerly of St. Louis, whom Shaw sought to evict from a plantation owned by the company in whose interest he was sent to that country.

Volcanoes Active in Alaska

Beginning on the 6th the volcano of Mt. Katmai in Southwestern Alaska was in violent eruption for three days, and great quantities of ashes, sand and pumice stone were thrown from it. At the same time the volcanoes of Mt. Iliamna and Mt. Redoubt were active. Katmai had been regarded as extinct. On Kadiak Island, where the ashes were a foot deep, all the crops were destroyed and all water supplies were poisoned. The fish in the sea were killed. All the inhabitants of the old town of St. Paul, on this island, about 500, were taken on board the revenue cutter "Manning" and carried away. They suffered from poisonous gases in the air, as did those on board other ships in Alaskan waters. When rain came, a mixture of it with the ashes in the air formed sulphuric acid, which burned the faces and hands which it touched. The ashes fell even at Dawson, 600 miles from Katmai, and the acid was found in the air as far south as Puget Sound. No lives were lost on Kadiak, but it is reported that not less than 200 persons were killed in villages on the mainland, near the volcano. Revenue cutters were promptly ordered northward, and President Taft asked Congress to appropriate \$100,000 for the relief of the destitute.—In Costa Rica, last week, an earthquake destroyed the village of Naranjo. In Mexico, on the 11th, the volcano of Colima was active, and twenty-seven persons were killed by earthquakes in the States of Colima and Jalisco.

The Situation in Cuba

At the end of last week there were indications that the Cuban Government was slowly but surely putting down the negro rebellion, but at the beginning

of the present week there were signs that intervention might be required. President Gomez has continually insisted that the revolt has been exaggerated by the press. This is the assertion of Speaker Ferrara, who is in Washington as the representative of Gomez. On the 10th he addressed the House during a recess, saying the revolt would soon be suppressed, that his Government needed no help, and that he hoped there would be no intervention. To Gomez he cabled the assurances of Secretary Knox that intervention was not contemplated, but when reports, apparently official, were published in Havana, to the effect that our warships would soon be withdrawn, Mr. Knox asked Minister Beaupre to say to the press that statements as to our Government's policy must not be accepted unless they came from the Minister or from our State Department. Some suggested that General Wood should be sent to Cuba as a conciliator. The Government there let it be known that he would not be welcomed if he should come with authority to make terms for a settlement of the controversy. Gomez undertook to suppress the rebellion in ten days. During the week there were several small engagements. In one, at Daiquiri, two rebel leaders were killed; in another, near El Cobre, the rebels lost 10 men. At Jarahueca, where Estenoz was in command, the Government was victorious and 14 rebels were slain. It was said that Estenoz was among them, that General Lecoste, another rebel chief, had been taken prisoner, and that General Ivonet and his men were surrounded and could not escape. But General Monteagudo's policy did not seem to be sufficiently aggressive, and he was criticised for extending to the 22d the period during which the rebels might lay down their arms and be pardoned. There was no further disturbance in or near Havana. In that city, it is said, more than one thousand suspected negroes have been placed in prison. Altho Estenoz had been defeated, he sent a letter to the mayor of Guantanamo, promising to burn that town, and an extraordinary proclamation was issued by General Andomarchi, "commander of the second brigade," who warned all foreigners in the vicinity of El Cobre to abandon their

homes within twenty-four hours. If they should not go, he added, he would hang them. He also asked foreign consuls to tell him what to do with the abandoned property, saying that in the absence of instructions he would burn it. The residents, many of them French, fled from their plantations. Monteagudo asserted that he could protect them, but his course had not inspired confidence.

Mexico's Revolutionists

There was no battle last week between the Federal army and Orozco's men. Huerta was repairing twenty-two railroad bridges, and was still 90 miles south of Chihuahua. At Pearson, about 200 miles south of the boundary, the rebels killed 20 Federal soldiers in an engagement and hanged 18 prisoners to trees. They captured the town, but soon retired, allowing the Federals to occupy it again. There were rumors of a battle at El Valle, in the heart of the Mormon colony, and it was said that about 75 had been killed on each side. At Pedracena, southwest of Torreon, a rebel force was attacked and beaten; 70 rebels were killed and the Federals captured cannon and ammunition. Argumedo, the rebel leader, was wounded. Huerta appears to have safeguarded the line of communication with his base. General Campa, who vainly sought to cut this line, returned to Chihuahua. He was then ordered to attack a Federal force at a point northwest of that city. He went to the front, and then came back to argue with Orozco, who put him in jail for insubordination. When the assembling of many rebels at Juarez indicated that there might be a battle at that place, the American commander sent warning that shots must not cross the line, as they did last year, when several residents of El Paso were killed. General Orozco's father replied that if our Government should continue to permit the shipment of ammunition to the Federal army he could not be responsible for the acts of the rebel soldiers. It is said that Orozco's agents are trying to negotiate in Canada the loan of \$2,500,000 authorized by the Chihuahua Legislature. Madero says that a Mexican State has no power to borrow abroad, and that such bonds would have no legal standing.

Lord Kitchener's first report as British Diplomatic Agent in Egypt has been published by the Foreign Office. It comments upon the effort made by "some of the more irresponsible" native newspapers to make capital out of the Italian invasion of Tripoli, and praises the self restraint of fellow Mohammedans in Egypt and their good work in "the equipment and despatch of Red Crescent hospitals." Lord Kitchener notes Egypt's dependence, for future development, upon improved conditions of agriculture, and the work of "the newly formed Agricultural Department of Government." He says that nothing more remarkable in the social history of Egypt has occurred in twelve years than the growth of opinion among all classes of natives in favor of the education of their women.—Lord Loreburn's resignation as Lord High Chancellor and Lord Haldane's acceptance of his post were arranged by wireless while the British premier was cruising in the Mediterranean. J. R. Seely, formerly parliamentary secretary to the Colonial Office, has been appointed Secretary of War to succeed Viscount Haldane. The change is said to presage a change in England's military policy.—A suffraget assaulted Mr. Asquith while he was receiving guests at the India Office on June 14. She tried to tear the epaulets from his official uniform. Two other suffragists, one a young man, attacked the premier the same evening. The Woman's Social and Political Union gives out an account of the affair which differs from that of the newspapers and charges rough treatment of the first manifestant.—Home Secretary McKenna has modified the sentences of Mrs. Pankhurst and the Pethick Lawrences in transferring them to the category of first class misdemeanants. This will give them the privileges allowed to political prisoners. A campaign of window smashing was opened at Dublin on June 13, and eight Irish militants were brought before the police magistrate. They had shattered forty-two windows in government buildings.—Sylvia Pankhurst and other suffrage agitators were heckled by Oxford students when they made cart-tail speeches in the university town on June

14. "We want Christobel!" the students cried—and eventually put the speakers to flight.

Maritime Strikes On June 10 a general strike order was issued by the Transport Workers of the United Kingdom. This was in consequence of the failure of London shipowners to accept Government proposals for ending the Port of London strike. The immediate response disappointed union leaders, tho Americans who desired to cross the Channel or to return to their homes on the steamships "Majestic," "Minnetonka" and "St. Paul" from Southampton were prevented from carrying out their plans. Bristol and Swansea were said to be tied up at first; but everywhere the strike weakened or collapsed as time passed. The Transport Workers seemed not to have had the resources for any sustained abstention from work, and by the end of the week many of them suffered from hunger. A parade by the wives, mothers and children of strikers was to have taken place on June 15 in London, but the paraders could cover only a part of the route, collecting contributions as they went. It is said that the general strike order was heeded by not more than 15,000 of the 200,000 transport workers of England. Ben Tillet, a labor leader, urged the immediate organization of a strikers' "police force," 2,000 strong.—In the meantime the strike of the crew of the "France," the newest and largest ship of the French line, prevented that ship's sailing from Havre for New York, and the strike spread to the "Provence," of the same line, which sailed, however, on June 15, manned by bluejackets from Lorient and Brest. The strike leaders were disgusted at this Government assistance to the steamship line. The Central Committee of the Seamen's Union announced at Havre on June 16 that action would be taken to demonstrate the solidarity of the strikers, and this will, it is said, take the form of a national strike of seamen and dockers, extending over twenty-four or forty-eight hours. The Compagnie Générale Transatlantique (the only line affected by the strike at Havre) states that all possible concessions have been

made and that there is nothing to arbitrate.—A general strike was inaugurated at Palermo, on June 12, as a protest against the low maritime conventions, which, it is said, hurt the interests of this Sicilian port. There was great disorder in the streets.

In Morocco Great Britain, in agreement with France, will accept with slight modifications the Spanish note regarding the Werga Valley question in Morocco: one of the points at issue between the French and Spanish in Africa. The first step toward settling them were taken more than a year ago, but the disagreement concerning the railway question has not yet been adjusted. Mulai Hafid, the Sultan, accompanied by M. Regnault, and a strong escort, left Fez on June 7 for Rabat. It was expected that he would journey to France: altho this is probably displeasing to his French supporters, and outrages the feelings of his subjects.

The Turks and the Italians On June 12, according to varying reports, a battle was won by Turks (and their Arab allies) and by the Italians, at Homs (Khoms), Tripoli. The Turkish report represented the Italians as having suffered heavy loss in a seven-hour engagement, and as having left behind them cannon, rifles, ammunition and stores. The Italians give the date of the engagement as June 11, and report the Turkish loss as 431 killed, against 31 Italians. Despatches received at Rome June 11 stated that the Moslem garrison of the Island of Lemnos, in the Ægean, capitulated upon the arrival of an Italian fleet.—It is reported from Rome that the Government is about to adopt stringent measures against the religious houses. This surprises the Church, which has supported the war with Turkey most enthusiastically.—Constantinople had its fourth great fire within a little more than two years on June 3, when a great part of Stamboul, the quarter of the Mohammedan population, was destroyed. Soldiers did the most efficient fire fighting. Looting is always a costly feature of these recurrent conflagrations, due in part to the

use of flimsy building materials and in part to the inadequacy of the fire department's equipment.—Turkish newspapers warn the Greeks inhabiting Turkish possessions not to be too friendly to Italian troops. They warn against a repetition of the incident at Rhodes last month, when the Greeks strewed flowers in the path of the invaders.

Foreign Notes On June 10 King George of Greece reached Athens from Copenhagen, where he attended the funeral of King Frederick, his brother. It is said that King George will abdicate in favor of the Crown Prince in 1913. His reign will have been half a century.—On June 10 Herr Hirth won the 427-mile air race from Johannisthal, Germany, to Vienna. Fully 300,000 persons saw the aviator make his start. Eight machines entered the contest. There were numerous accidents.—According to dispatches received at Hong Kong horrible brutalities are being perpetrated in various cities in China. Executions are taking place daily at Wu-Chow, where men are being shot on the slightest pretext. Government troops fire volleys at them from a distance of only five yards, and blow them to pieces. Fragments of their bodies are then scattered over the streets, where they are left for pigs and dogs to devour. Secret meetings have been held by citizens of Wu-Chow to plan vengeance on officials carrying out the executions. A force of 1,000 soldiers is stationed in the city, but piracy is rife. The city of Tsinan, in the province of Shantung, was on June 14 in the hands of 2,000 mutinous bandits. The Governor took refuge in the Catholic mission, and the town was the scene of burning, shooting and looting.—The Chinese Premier, Tang Shao-yi, suddenly departed from Peking on June 15, taking a train for Tien-tsin. The evening before there was rioting among the soldiers outside the capital. No explanation of the Prime Minister's move is offered by his Government.—The situation at Canton is grave. There is continued street fighting. Nine foreign gunboats lie at anchor off the foreign quarter. Government notes are worth only 70 per cent. of their face value.

Addition Without Division=Revolution

BY WALTER WIGDIL

[The author of this article is an American who has lived three years in Cuba, and who is thoroly familiar with present conditions.—EDITOR.]

THE Cubans as a mass are not educated—many of them cannot even read or write—but they have solved their greatest mathematical problem of the day; *i. e.*, addition without division = revolution.

Any government, the foundation of which is graft, topples over upon the question of division, which is particularly true in Cuba. The present so-called "negro revolution" is an attempt to make division equal to addition—to adjust the division to the satisfaction of the blacks. They, with the mulattoes, are about 75 per cent. of the voters and only receive a very small proportion of the perquisites of a government the alpha and omega of whose acts are graft, graft graft.

President José Miguel Gomez, during his campaign prior to election, promised the negroes everything and anything to get their votes, but after election he either forgot or was unable to fulfil his promises.

The result is that today, six months before the next Presidential election, the blacks are going to adjust their difficulties to suit themselves, or there will be no Cuban Republic.

The present crisis has developed many complications, and any adjustment will of necessity have to deal with many questions that only have indirect bearing upon the present revolt against President Gomez.

The revolution in itself is not a serious matter. The number of the revolutionists is fairly large, but they are unor-

ganized, badly armed and will not fight. Theirs will be a bushwhacking, guerrilla warfare, with the torch, looting, and the violation of defenseless white women and children as their weapons, to extort money from the foreign business interests, until Gomez has been driven into a corner (with intervention to protect foreign interests forcing him), so that he must treat with the revolutionists and either win over their leaders and induce

them to sell out their compatriots (which is not unlikely, as it is every man for himself), or recognize the negro party, thereby turning Cuba into a black republic and creating a condition far worse than prevails today.

The Gomez regime was built upon the ashes of revolution. The cornerstone of the structure of government was taken directly from the example set by the administrators of the second American intervention, and the crime of Cuba—her condition today is a

crime—is directly traceable to the United States Government.

Tomas Estrada Palma, first President of Cuba, served one complete term and was re-elected for another term, without any opposition, his opponent withdrawing from the race prior to election day, before his administration was overthrown by political malcontents, mainly because the doors to the Government treasury were so well guarded that neither Palma's friends or foes could loot the vaults.

Palma was driven from Cuba during

PRESIDENT GOMEZ

the time Spain governed the island, and for many years he was a public school teacher in the United States. He had our ideas of government and economies, and, as a true Cuban patriot, he ruled with a fist of mail, keeping the rabble well in hand. His Government appointees were from among his able countrymen—so few in number—who would see Cuba developed into a strong little nation.

This did not suit the politicians; they were not making a "good thing" of the Government. There were no "pickings." These malcontents, headed by General "Pino" Guerra, began a guerrilla warfare, applied the torch, and made a disturbance loud enough to attract the attention of our State Department, at Washington, causing American troops to be sent for a second time to the island. William H. Taft, then Secretary of War, visited Cuba to assist in adjusting the trouble.

President Palma, with true open-minded patriotism, resigned, stating that he would not fight his countrymen, and that if his election was tainted with fraud, as charged by the revolutionists, his conscience would not permit him to hold the office. Therefore he turned the reins of government over to the American intervention, and Secretary Taft, as

the direct representative of the United States, caused another election to be held and turned the government over to the rebels, thereby creating a precedent for the reign of the torch, riot and looting of private property, which precedent the negro revolutionist of today is following.

General "Pino" Guerra was rewarded for his part in the insurrection by being made commander-in-chief of the Cuban army. It was this adjustment that put Gomez in power, backed, of course, by the votes of the malcontents of the Palma administration. The revolutionists of today hope, by forcing American intervention for a third time, that President Taft, the adjuster of the former revolt, will do as much for the negroes as he did for Gomez.

During the period of the other revolution the insurgents, most of whom were negroes, imprest all the horses that they could find, riding was so much easier than walking, and in case of necessity they could get away so much faster; but at the close of the period of strife each insurgent claimed ownership to his horse (or anything else of value he had been able to steal) and refused to recognize the rightful owner. This led to much wrangling and many bitter controversies. Secretary of War Taft upheld the theory of "possession is nine points of the law,"

UNCLE SAM: I have come to investigate; I believe I have cause enough.
CUBAN: Welcome to the land of the goats (grafters).—*Politica Comica*.

and ruled that if the disputant could prove ownership to the horse, he could demand—not the horse—but \$50 from the Cuban Government, while the horse should remain the property of the man who had been able to steal it.

The second American intervention was under the charge of Governor Magoon and Frank Steinhart. The latter was at one time the representative of the American Government in Cuba, but upon this occasion he was in the volunteer army, and his private office was in front of that of Governor Magoon. He was the watch dog of the administration, and was then called and is now always referred to as the "man behind the throne."

When the Magoon-Steinhart combination assumed charge of affairs there was a surplus of \$23,000,000 in the treasury and no indebtedness, but when the intervention closed, in about eighteen months, the surplus was little more than \$1,000,000 and they had created a bonded indebtedness of over \$50,000,000. Besides, this Steinhart-Magoon (please note the change in position of the names) owned the trolley franchise for the city of Havana.

At the time of and prior to the second intervention, all classes in Cuba looked with favor upon annexation. The Americans as a class were loved and respected and the United States Government could have done anything that it wished with Cuba or her people, and they would have been satisfied; but, owing to the failures of this intervention, the sentiment has changed, until today America and Americans are in disrepute with the best element of the people, unfortunately with just cause.

Nothing shows the Cuban's lack of love for us better than the resolution introduced in Congress, not many months ago. It prohibited the study of the English language in the public schools and called for the dismissal of the American teachers of English. It wasn't passed; not for a lack of votes, mind you, but because Congress adjourned before any definite action could be taken.

Following in the footsteps of the Magoon-Steinhart administration, after the withdrawal of the troops, crafty Americans, the "hangers-on" of the

army of intervention, by combining with scheming native politicians, headed by a President who has his price, have succeeded in bankrupting Cuba. They have looted the national treasury, sold or pawned the natural resources of the country's wealth, increased taxation to the breaking point, loaded the country with debts, because the revenues for the legitimate cost of government have been diverted into private channels. President Gomez himself is accused of having amassed a private fortune, the figures of which run into millions, in the three years he has held office.

Graft and misrule spell Cuba's ruin. Discord and strife are rife among all parties. It is the foreigner who develops the wealth and resources of the country, who furnishes the money for the treasury, while the native, who does not belong to the Government clique and therefore cannot get to the cash box, spends all of his time plotting to overthrow the Government, hoping to secure some of the big emoluments of office under some new regime.

In the name of humanity, the United States gave freedom to the Cubans, but did not carry the work far enough. No stable form of government was given them, neither did the United States reserve the right, or at least is not enforcing the right, to maintain a government that would protect the foreign business interests. If such a right is to be asserted now it will be thru armed intervention. As the vultures follow in the wake of an army, so have the human vultures perched themselves on the carcass of Cuba. She is now having her reign of the "carpet baggers." A few—a very few—instances will only be necessary to depict this condition.

Steinhart feathered his nest while "office boy" for Governor Magoon; he owns the trolley franchise for the city of Havana. Gomez started his career of concession-selling within three months after taking his oath of office, by selling to Americans the perpetual franchise for the telephone systems thruout the entire island. Foreign railroad interests induced the Government to trade the last piece of public land fronting on the Havana harbor for another piece of ground in the heart of the city and less

than one-quarter the size, thereby causing the city to lose several millions by this deal.

The latest and most barefaced transaction of the entire regime is the port bill. This act has levied an additional tax of 70 cents a ton on all American imports and 88 cents a ton on all foreign imports, save only the import of coal, the tax on which is 10 cents a ton. The bill further provided that this tax is to be collected for a period of thirty years. The average import per year will yield an income, from this new tax, of \$1,200,000, and \$36,000,000 is the estimated return in the thirty years, but if the imports increase the returns will be larger.

This money is to be paid to the Ports Improvement Company, owned and controlled by Americans. The company, under the terms of their concession, agrees to make certain river and harbor improvements, the actual work of which has been sublet to another American firm, which is doing the work very profitably for less than \$15,000,000. The Ports Improvement Company is to be paid over \$20,000,000 to watch the other fellow do the work!

It is his acts of this kind, together with his bankrupting the country, and his lack of faith with the masses of his supporters, that have caused President Gomez to be placed in the very trying position he occupies today. He has the confidence of no one, not even those with whom he has been sharing the loot of the country. They know that he will sell them out to the highest bidder, even as he will sacrifice Cuba, if it is to his interest to do so, in the settlement that may be effected with the negro revolutionists.

Gomez has found the Presidency such a bonanza, far better than any "Get Rich Quick Wallingford," that he will yield the office to another with great reluctance. This introduces another feature of the present revolt. Should Gomez, by any twist or turn, pacify or buy off the insurgent leaders and restore a semblance of a government, he can then pose as the "savior of his country," the "one strong man" who prevented American intervention. A twist of this kind, owing to the unpopularity of Americans, will insure the re-election of Gomez.

The American press devotes much

space to talk of annexation, but there is no sentiment of this kind among the Cubans. Should the United States decide upon such a step they will have to submit, as a child yields to a bully; but in such a case Uncle Sam may expect to have bricks fired at him every time his back is turned. The Americans and most of the foreigners lean toward annexation, because they have been held up and sandbagged so often under Gomez that they would rather take a chance on another fiasco, similar to the second intervention, than have Gomez or some one else equally bad.

The present disaffection of the negro is serious, for it has started the fires of a race hatred that has been dormant for years. The negro has always been patted on the back by his white brother and been given a semblance of equality, to further the ends of scheming politicians. White and black eat and drink together, promenade the streets arm in arm, with a show of brotherly love far from real.

Under the Morua law he is forbidden to organize a political party of his own; true, that is not the letter of the law, but it is the way it is enforced. For nearly a year the negro agitators have been demanding the repeal of this law and the right of the negroes to form the Independent Party of Color. It was the negro votes that put Gomez in power, but Gomez and his machine politicians, in the arrogance of their positions, have forgotten their "colored brothers" in the division of the gross grafting and squandering of public moneys. Therefore the day of reckoning is at hand, and the negroes are determined to have a more equal division of political opulence.

The present uprising is very grave, because of the bitterness of the feelings engendered and because of the mode of warfare adopted by the negroes. Their strongest weapon will be a series of reprisals against foreigners, persons will be captured and held for ransom, the torch will be applied to buildings and crops and can only be stayed by the payment of indemnity to the insurgents, who will make these demands as often as their sweet will may see fit.

An exodus of the women and children is taking place, in the affected region. Rarely will the natives attack a foreigner

—he will fight and the negroes know it. A knife in the back, a potshot from the bushes or from behind a building, is the method employed in getting rid of a foreigner.

General Ivonnet, one of the leaders of the insurgents, placed his ideas of warfare on record in 1897, when, as a colonel in the forces in revolt against Spain, he issued the following order to a subordinate:

"You will employ your forces and if necessary requisition more men to carry out this order. Go at once and loot the houses of the men hereinafter named and hang the men on trees. Do not pay any attention to public protests, but send me an ear of each of those hanged and burn their houses. Order your soldiers to send the women and children to this town.

(Signed) PEDRO IVONNET."

The forces of the Cuban army have been in the field for several weeks, but have failed to do anything, because they are cowards. A Cuban won't fight, but he will stab an enemy in the back. The army moves in force and makes half-hearted endeavors to meet small bands of the insurgents, but the negroes, moving in much smaller numbers, always get away. If the Cuban officers had the backbone to scatter their forces in smaller units, they could meet the revolutionists upon even terms and results could be accomplished. Don't become alarmed, however, it won't happen; it is too dangerous—some one might get hurt in such an encounter. A real, blood-thirsty battle has been heralded by the newspapers for many days, but when the encounter takes place, the casualties will not be as great as those of a first-class railroad wreck.

In the meantime the foreigner doing business on the island is the sufferer. He is the "easy mark" of the revolutionists of today, he was of the Gomez clique of yesterday, and will be again tomorrow, if Gomez can re-establish his government.

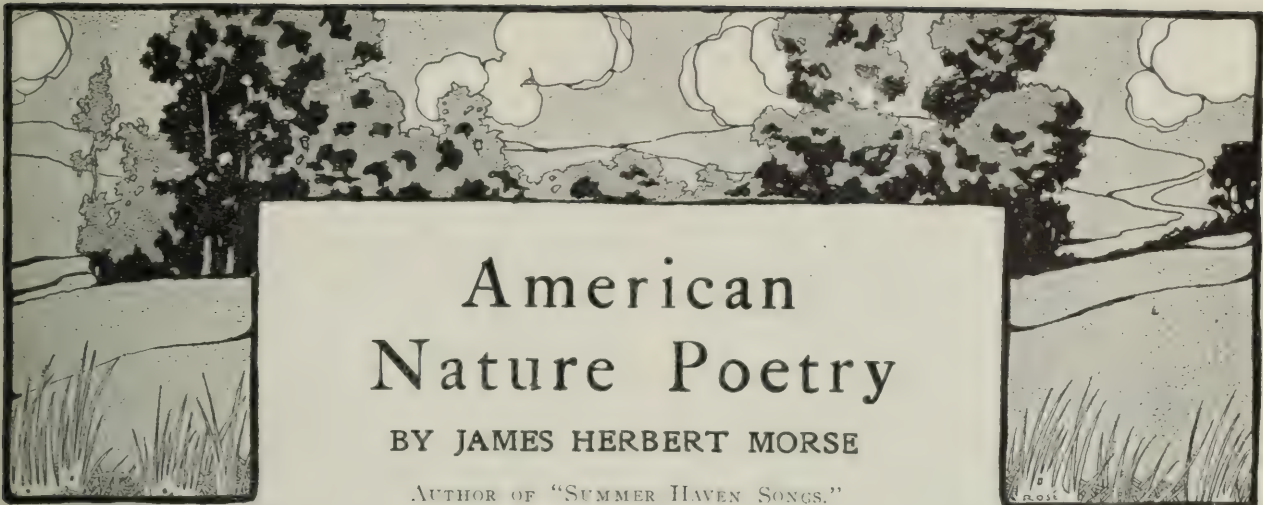

The United States is responsible to the world for the existence of the Republic of Cuba. Foreign nations, thru their citizens with money invested, can and do hold us responsible for the stability of the Government. For these reasons, the American Government must assert rights and assume responsibilities sooner or later. There is too much American and foreign capital involved for the present state of affairs to last. It is the foreigner who furnishes the money and pays the bulk of the taxes, but his financial interests have no protection from the Government. He is the "goat"—and is fleeced right and left.

To stop this colossal fraud, called a government, it will not be necessary to annex the island. Cuba may need us, but we do not want the Cubans. They, as a mass, are a degenerate race, lacking in all the instincts of civic pride or honor and utterly disregarding all moral obligations to themselves. This mass of degeneracy will always hold the balance of power and be able to overthrow any government that can be established on the island, if the management of the revenues is left to the natives.

Let the Cubans govern themselves; they are entitled to that right. But let the United States administer the finances and see that the legitimate cost of government is maintained and that the resources of the country are conserved for the future generations of the Cubans.

Take the control of the finances away from the native, and such men as Gomez and Ivonnet will never write their names in the history of their country; but, better still, the great incentive for revolution will have been killed. This is the keynote of the situation, and it is decidedly up to the United States to end once and forever the conditions that prevail in Cuba, before some foreign nation, acting in the defense of her citizens, demands the abrogation of the Monroe Doctrine.

HAVANA, CUBA.

American Nature Poetry

BY JAMES HERBERT MORSE

AUTHOR OF "SUMMER HAVEN SONGS."

THE vast forests of pine and oak, once the theme of poets and novelists, are receding toward the Far Northwest, where "rolls the Oregon and hears no sound save its own dashings." The red man and the mysteries of the great unthreaded river valleys are no longer available east of the Mississippi. Almost unheard east of the Rockies indeed is that old-fashioned song—that Nature-song that reveled in vast solitudes,

"Vast rocks against whose rugged feet
Beats the mad torrent with perpetual roar,
Where noonday is as twilight and the wind
Comes burdened with the everlasting moan
Of forests and of far-off waterfalls."

Yet the Nestors of Whittier's generation still tell of a wilderness fringed with frontier settlements within a day's journey of Boston and New York. New England was the early home of our nature verse. Today a vigorous poet returns from the Klondike singing of the "Northern Lights." Today every boy who can get out upon the hills is a nature-worshipper. Song is in his heart, just as it was in the heart of Whittier when he sang of "The Bridal of Pennacook"; just as it was in the days of Homer when he sang the wanderings of Ulysses. The spirit of Nature and the heart of man were wedded long ago, and they will celebrate many a golden wedding in many a golden song. How finely the song is defended by Macaulay:

"Since its first great masterpieces were produced, everything that is changeable in this world has been changed. Civilization has been gained, lost, gained again. Religions and languages, and forms of government, and usages in private life, and modes of thinking,

all have undergone a succession of revolutions. Everything has passed away but the great features of Nature, and the heart of man, and the miracles of that art of which it is the office to reflect back the heart of man and the features of Nature."

In America, the early nature note was of the grander style. Bryant got the forest-pitch. The hint came from Wordsworth, an easy note—so the boy seemed to find it—but it was never found quite easy by any one since. The spirit of the song was wholly American, wholly dominated by the theological inheritance of the Puritan-Pilgrim pulpit. Life was still the brief period of preparation for the tomb, and the boy's optimism was not able to get beyond the possibility of seeing in Nature anything but the beautiful ceremonial garments for the solemn procession:

"So live that when thy summons comes to join

The innumerable caravan which moves
To that mysterious realm where each shall take

His chamber in the silent halls of death,
Thou go not, like the quarry slave at night,
Scourged to his dungeon, but sustained and soothed

By an unfaltering trust, approach thy grave
Like one that wraps the drapery of his couch
About him, and lies down to pleasant dreams."

In his later verse, the great summits—"Autumn Woods," "The West Wind," "A Forest Hymn," "The Death of the Flowers"—unsurpassed as expressing the grandeur of Nature in her wilderness forms, still showed traces of the ceremonial robes, the somber lacings of the funeral march. If the robes were for a length of time in scented cedar, he loved to take them out, turn them over and snatch a sober hue from them for

even so elevated and beautiful a poem as "The Waterfowl." Philip Freneau had done some bits of descriptive work before Bryant. It was redolent of an old-time inspiration. He was twenty-three when the Revolution cast its shadow upon the Colonies. Joseph Lyman Arnold, who came of age in 1786, celebrated the biggest river he could find in his neighborhood, the Connecticut, in the easy catalog style:

"Sweet River, in thy gentle stream
Myriads of finny being swim:
The watchful trout with speckled side,
The perch, the dace in silvered pride,
The princely salmon, sturgeon brave,
And lamprey, emblem of the knave."

Doubtless Nature was grateful for even this slight attention. John G. C. Brainard had a pretty touch of his own. A year younger than Bryant he was, but no mean singer. With the Salmon River for a theme, he enters with promise into the devoted band of Nature bards, and waves his little flag:

"'T is hard to rhyme
About a little and unnoticed stream,
That few have heard of—but it is a theme
I chance to love,
And one day I may tune my rye-straw reed
And whistle to the note of many a deed
Done on this river, which, if there be need,
I'll try to prove."

Pierpont and the elder Dana, older than Bryant, were yet his contemporaries in their singing years, and touched finely on the larger aspects of Nature, Dana particularly singing well of the

"Solitary shore
Of craggy rock and sandy bay,
No sound but ocean's roar,
Save where the bold, wild seabird makes her
home,
Her shrill cry coming thru the sparkling
foam."

Cooper and Walter Scott, of course, were in his mind. Every boy was reading Cooper's sea tales. Halleck, Sprague and Mrs. Sigourney were in frocks when Bryant was coming into trousers. They all came of age when America was shaking her little fist against the mighty England of Trafalgar and Waterloo, but they had all passed their childhood sitting by the brooks. Mrs. Sigourney sang sweetly of "The Early Bluebird." Sprague filled the schoolbooks with eloquence touched with poetry, in which Nature's name often figured. Halleck sat down by the Connecticut and added

his mite to the wrath which was supposed to make the Old World tyrants tremble. He could do it very comfortably by the sprawling, beautiful river whose

"Gray rocks tower above the sea
That crouches at their feet, a conquered
wave;
'Tis a rough land of earth and stone and
tree
Where breathes no castled lord or cabined
slave;
Where thoughts and tongues and hands are
bold and free,
And friends will find a welcome, foes a
grave,
And where none kneel, save when to heaven
they pray,
Nor even then unless in their own way."

There were some drawbacks to his statement of facts, and perhaps a sly bit of fun in his concluding line, but one sees the shaken fist, and the smiling river looking on and approving the sentiment. Nature is a kindly mother to all sorts of people. She carols, dances, laughs, is gay, sad, rollicking. When we had large forests, unchecked rivers, untrenched mountains, the imagination reveled in the long winters, in shadows that traversed the wide openings, in waters darkling under still pines. For the lover of wild music the wind must turn up the sea, beat on the ragged rocks. The dreamer found a mysterious whispering among the hemlocks. For Joseph Rodman Drake,

"The bluebird caroled in the still retreat,
The antic squirrel capered on the ground.
Where lichens made a carpet for his feet;
Thru the transparent waves the ruddy minkie
Shot up in glimmering sparks his red fin's
tiny twinkle."

This, of course, was on a sunshiny holiday on the Bronx. How divinely Nature sang that song of the mocking bird:

"Soft and low the song began,
I scarce caught it as it ran
Thru the melancholy trill
Of the plaintive whippoorwill,
Thru the ringdove's gentle wail,
Chattering jay and whistling quail,
Sparrow's twitter, catbird's cry,
Redbirds's whistle, robin's sigh,
Blackbird, bluebird, swallow, lark,
Each his native note might mark
Oft he tried the lesson o'er,
Each time louder than before.
Burst at length the finished song.
Loud and clear it poured along.
All the choir in silence heard,
Hushed before this wondrous bird."

In the thirty years following his "Thanatopsis," Bryant had developed his grandest hymns, and Nature was ready for lighter song. All the bards were tuning instruments of various quality, some fairly earning that rasping roar which Lowell in his savage moments—and he could be very savage—visited upon poor Percival, who didn't altogether deserve the full force of the roar. "He never in his life," says the irate critic, "wrote a rememberable verse." And yet one boy, who sat in the niche at the front door, harking to the winds, never forgot that beautiful Nature poem address to the Seneca Lake:

"On thy fair bosom, silver lake,
The wild swan spreads his snowy sail,
And on his breast the ripples break,
As down he bears before the gale."

Lowell never enjoyed himself so much as when he had within his critical jaws a tender bit of poet's flesh or a tough bit, like Thoreau's. When he got hold of such, he shook it as a terrier shakes a rat. The Nature poets particularly roused him. "By and by," he says, "we shall have John Smith advertising that he is not the J. S. who saw the cow-lily on Thursday last, as he never saw one in his life, would not see one if he could, and is prepared to prove an alibi on the day in question." Possibly Channing, of the early Concord school, had got on his nerves—Channing, who sometimes earned a hard rap for such couplets as

"The leaves of the forest are changing their
hue,
They are yellow and red, like a carpeted
pew."

But Channing was a true Nature poet, who saw straight and reported accurately, as thus:

"I sat and heard
The night hawks rip the air above my head."
and thus:

"The serpentine progression of the stream
That plays its rival flute-note all the year."
and this:

"Dearly he prized
The hungry winter nights when owlets sang."
and again:

"Was it the oak leaf falling in the forest?
Was it the torrent whispering down the
glen?"

But these finer bits came after Emerson's gentle chidings. For Emerson,

who loved Channing and thought him a great singer, yet admits a certain deafness on the poet's part to rhythm, and hints that perhaps there was a little obstinacy in his "neglect of conventional ornament and correct finish," as if he would "cripple his pentameter to challenge notice to the subtler melody." Even in the later and best days of Channing, Lowell might perhaps have seized upon a couplet to give a sharp turn to the Concord egoist, who often enough

"Filled the prospect with himself."

One can, for instance, imagine the Cambridge critic putting on ear pads when, in the fine poem, "The Hermit," the half-mad fellow in the woods

"Bawled such ballads to the stars,
The wintry fields, and all the depth of snow,
And that cold, staring moon, that Nature's
self
Came out to hear his cry, and sat half-
pleased."

By 1840, when Wordsworth was still dominant in the American school of song, our Nature poets were in full swing in the wild lands and the home-lands—as original, as specific, as home-keeping as were the English singers of the Lake school. Bryant had set the American tone in the minor key, from which he departed only with difficulty. Emerson reached his twenty-first year in 1824; Whittier and Longfellow theirs in 1828; Poe and Holmes, in 1830. But up to 1832 Emerson was thinking of the pulpit; Whittier of the slave-pen and little else. In 1840 Holmes was distributing prescription pads, and nobody ever at any time accused Poe of being a Nature poet. Thoreau and Channing were old enough to vote in 1836 and 1839 respectively. But the whole Concord school was pouring forth song near the sources of the Musketaquid. About that time Lowell spent a few weary but productive months in the same neighborhood, with rustication papers in his hand. His early verses, "To the Dandelion," were the first that really struck the Nature chord that was to be his. Often in later days he removed his feet from the fender before his "Elmwood chimney's blaze" for a brief excursion among his elms. There within the limits of his own garden were his loves—the "golden-embarrassed bee," the "white lily's breezy

tent." But the dandelion was his first love:

"Thou art my tropics and mine Italy.
To look at thee unlocks a warmer clime;
The eyes thou givest me
Are in the heart, and need not space or time."

With the dandelion came the blue-birds. They were very sane bluebirds, however. He did not call them larks or nightingales. What they fluted or whistled he knew accurately. He adopted them as his everyday familiars, made them share with him his best books and the essentials of his pipe. He didn't strip them of their fine feathers to get at the anatomy underneath. He preferred to see them in his elms and under his willows. They were to him part of the university and spoke all the languages.

Meanwhile Whittier was growing in Nature song—rather slowly, to be sure—to an equal height with the best. What a delicious hominess there came to be in his walks and talks with the muse, who had seen him on the bench as a boy, liked him, followed him into the sitting-room among the poets, and at last shyly drew him along the fences to the meadows, by the twinkling waterfalls, the autumn corn and pumpkins, not averse even to feeling her cheeks redden when the woodman's team shrieked over the frozen roads in January. Whittier was wholly American in his borrowings from natural scenery. Slow at first to take to the by-paths, and concerned chiefly with human life, both Whittier and Lowell sought men, and it was long before the muse, teased by their neglect, lured them into her sylvan solitudes. When she did at last find them disposed to linger in the "sweet-scented birk," it was a glad day for her and for them. She was at her prettiest and put out her lips daintily:

"If a body meet a body
Comin' through the rye,
If a body kiss a body,
Need a body cry?"

Here and there in those days such a hint came to others—to Cranch, to Higginson, to Bayard Taylor, to Stoddard and Stedman and Boker. With Thoreau she was demure enough, talked botany, and told him delicious things about herself and her wayside habits, but when he mentioned love she escaped. She never let him get even a platonic kiss. With Whitman, who reached his majority in

the same year with Lowell, 1840, she had no talk in those early days. It was only when he sat on the fence and resolved to "loaf and invite his soul," that she began to get curious about his purpose, and let him say in prose his best things. She never warmed up to him as a Nature poet. She refused and always will refuse, one must suppose, to look upon a horticultural catalog—so many squashes, beans and pumpkins—as an acceptable introduction to the muse. Yet in prose never did a Nature-lover reach a finer expression than did Whitman of the beautiful charm of the forest and field. The moment he sat down with the poet's quill, for a wooing song, his wooing became too indiscriminate. The innumerable items of her various charms grew monotonous.

Meanwhile the muse was somewhat shyly standing by Emerson, neither in the platonic mood nor in that of the rye, much less of the sans-culotte. Gladly she came to his side and touched his heart to the deeps, until he sang

"And I shall hear my bluebird's note
And dream the dream of Auburn dell."

This wayward, beautiful child led him to the supreme heights. His "May Day" is a glowing ecstasy of the out-of-doors. His genius gilds the harsh facts of geology, of botany, makes even the catalog blossom and the hammer strike out poetry from the pleiocene rocks. Nature reflects for him all the philosophies. She reaches the stars, takes a mystery from the midnight, sounds the deeps of the sea and tunnels the hills. In his un-rhythmic verse he touched Nature at the radium facets and startled the poet in us all with "the light that never was on sea or land." It is curious that the three loveliest nature poems ever written in America or anywhere else—"May Day," "Snow Bound" and "Under the Willows"—should so exactly illustrate Wordsworth's text, "The child is father of the man." Emerson was sixty-four years old, Whittier sixty, Lowell fifty, when each, publishing his masterpiece, turned back to Nature to state his obligations. Each had walked with the mother in childhood; Whittier among the homestead hills of Amesbury, Lowell under the immemorial elms of Cambridge, and Emerson within easy access

to gardens and pastures, "sunny in winter and shaded in summer," where "the tinkling of cow-bells was by no means an unusual sound." But it was in the pastures of Concord that he learned to express the fine heart of Nature as did none of the poets. After his divine alliance with the muse that brought heaven and earth into the compact celebrated in his "May Day" rhapsody, all other Nature poets seem dull.

Yet how much of beauty was left for those who went to Nature for consolation and balm! One thinks of Taylor, home from his world wanderlust, but only for the

"May-time, and August, November, and over the winter to May-time;"

of "Helen Hunt" Jackson, of finest color sense and delicate ear for melody, when "Chestnuts, clicking one by one,
Escape from satin burrs; her fringes done,
The gentian spreads them out in sunny days;"

"The summer charily her reds doth lay
Like jewels on her costliest array;
October, scornful, burns them on a bier:"

of Higginson, in his "Snowing of the Pines," with its exquisite picture of the soft carpets laid in the woods, and later, of Woodberry, with impressive echoes of the sea, whose elementary forces whirl and rage along the fine passages of "The North Shore Watch," a poem by no means of the green fields and yellow grass pattern. It could only have been written by a scholar feeling the vast solitudes of America where they impinge on the vaster solitudes of the ocean. Of

Lanier, in the "Marshes of Glynn," a delicious song in its musical play on the chords of Nature's sweetest lyre. By the song that the wind makes on the marshes he would win his way to heaven:

"As the marsh-hen secretly builds on the watery sod,
Behold I will build me a nest on the greatness of God:
I will fly in the greatness of God as the marsh hen flies
In the freedom that fills all the space 'twixt the marsh and the skies:
By so many roots as the marsh grass sends in the sod
I will heartily lay me ahold on the greatness of God.
Oh, like to the greatness of God is the greatness within
The range of the marshes, the liberal marshes of Glynn."

It would be difficult to find in all English verse a richer landscape treatment of Nature in that higher style of art that appeals to the sense of color, of melody and soul behind the register of all the senses, than is to be found among the American poets. In the three great poets already mentioned, and in poems and passages less artistic, America may find ground for the hope that her new brood of singers now taking flight for the Far Northwest will not bring shame to the lovers of song of the loftier pitch. Nor will the cowslips and cattle be slighted; nor curds and cream; nor Corydon and Phyllis; nor Chloe with her curls, her diploma, her left-handed curve with the ball, and her pretty field-suit in May time on a back ground of apple orchards.

CHELSEA, MASS.

The Ugly Duckling

BY CHARLES F. LUMMIS

If Love were not by magic, but of Merit,
If hearts were not to Lose, but must be Earned,
If Loyalty were bounden to Inherit,
If Reason were the reason Fancy turned—

For sure, no peerless beauty should outrun thee,
Nor very Genius steal a thought away;
So single heart and patient faith had won thee
The passion of Forever-and-a-day.

But Love and lightning strike where least we reckon.

We choose not their beginning nor the end:
Yet thee unto the rarer throne we beckon—
The Woman who can really be a Friend!

So loyal, so unselfish to the call of us,
So mother-hearted and so sure of hand—
God pay thee all the debt we owe thee, all of us;

We are too poor to make thee understand.

LOS ANGELES, CAL.

A Wider Morality for American Women

BY SUSANNE WILCOX

IN the light of the present-day public awakening among American men, the lack of a similar general awakening among women is conspicuously noticeable. Altho the code of private and conventional morals among American women is deep-rooted and unswerving, their sense of public morality is still limited and superficial. They are not yet awake to the fact that modern industrial, social, and even political problems are moral problems, and inseparable from home and family interests.

A prominent young English suffragist who recently visited America pronounced American women most anomalous—highly intelligent but with almost no knowledge of or interest in the really great and important matters of the world, and generally ignorant of their husband's business affairs. She, therefore, despaired of accomplishing much for the cause of equal suffrage so long as such a state of mind is prevalent.

Social life at Washington city, it is alleged, is perhaps more influenced by women than is common, yet it is further alleged that the majority of these women manifest little or no interest in progressive legislation or in the larger social movements. Primarily they are interested in the personal advancement of their husbands and friends, and are ready to do anything within their power to promote these individual interests. They are, however, scrupulously concerned with matters of private repute; but with public immorality—so long as it is not too flagrant—they are most indulgent. Whether a man prosper by sharing in a large public "graft": whether he advances by serving the acknowledged predatory interests, or whether his bread and automobiles are procured by any of the multitude of public or industrial abuses, is of little import to them. So long as a man's private record is conventionally correct, they will blink the facts of his public misdemeanors.

This attitude among American women

is more or less typical. There are few who would not be shocked if their husbands or sons should directly defraud a business partner, neighbor or individual, tho the majority of them would, in all likelihood, look indulgently upon the quiet misuse of public funds, especially if such misuse were cleverly disguised in the form of perquisites or overcharges.

Some time since I visited in a community where a prominent citizen was being tried for a prolonged and flagrant misuse of a public trust. Not only had he squandered public funds, but private funds as well, which had been entrusted to him. Yet during and after his trial one heard women at every turn condoning his offenses by such comments as: "Oh, a man who's been as kind to his family as he's been can't be so very bad!" "Why, his daughter Molly, never had a wish that wasn't gratified!" "Think how kind he's always been to the poor!" "He's always given liberally to the churches," etc. And his own wife, on hearing that he had been sentenced to the penitentiary, devoutly exclaimed: "Well, thank God, John's private morality has always been irreproachable, so I can never think he's done anything very wrong!"

This laxity of public morality among women does not imply that they are less moral than men, but rather that they lack a sense of public honor because they have little or nothing to do with public affairs, and no interest in them. Yet almost invariably does it follow that when a woman becomes deeply interested in public or civic problems, she develops along with that interest a sense of public or community morality, obligation and responsibility which she has not previously possessed.

Along these lines, furthermore, modern education has done little for women. It has trained them to acquire knowledge, but has contributed little toward influencing conduct or shaping character. Indeed, scores of women leave college

with a predominant desire merely to lead soft, sheltered, luxurious lives, occupied chiefly with afternoon teas, riding in automobiles, and similar diversions, and with no actual desire to take a firmer hold on life and the things which make for general progress and development. It is among these same women that one finds the greatest indifference to the cause of equal suffrage. "Why should I bother about the ballot?" they will generally say; "I feel no need of it."

In a recent discourse Mrs. Forbes Robertson Hale said:

"These rich ladies at the top, these unemployed women, have had every physical, mental and moral advantage in their environment, and live in a country of the most overworked women in the world. I see these women so occupied by this tremendous activity we have in America that they have little time to look to their State or municipal housekeeping."

True, there are some women who leave college glowing with enthusiasm and aspirations to live deeply and abundantly, eager to fill places of usefulness, to achieve something worth while, but social and conventional customs soon smother their enthusiasm, and presently they too lock step with the rank and file of their class, and lead the same vegetable existence.

To this fact Jane Addams, with her vast and exceptional experience, in her book, "Twenty Years in Hull House," convincingly attests:

"We have in America a fast-growing number of cultivated young people who have no recognized outlet for their active faculties. They hear constantly of the great social maladjustment, but no way is provided for them to change it, and their uselessness hangs about them heavily. Huxley declares that the sense of uselessness is the severest shock which the human system can sustain, and that if persistently sustained, it results in atrophy of function. These young people have had advantages of college, of European travel, and of economic study, but they are sustaining this shock of inaction. . . .

"I have seen young girls suffer and grow sensibly lowered in vitality in the first year after they leave school. In our attempt then to give a girl pleasure and freedom from care we succeed, for the most part, in making her pitifully miserable. She finds 'life' so different from what she expected it to be. She is besotted with innocent little ambitions, and does not understand this apparent waste of herself, this elaborate preparation, if no work is provided for her. . . . This desire for action, the wish to right wrong and alleviate suffering haunts them daily. Society smiles

at it indulgently, instead of making it of value to itself."

In short, the lives of too many American women are still smothered with domesticity, and the outgrown ideals of home and motherhood. The old ideal was that if a woman devoted herself faithfully and exclusively to her own household, her own husband and her own children, she fulfilled the highest duty of womanhood. But times have changed. If the woman of today fails to interest herself in the world outside of her home, she is apt to be a poor mother, a poor wife and a poor citizen. To be a good mother nowadays she must know a good deal of the actual workings of the world in which her children live. Since she no longer makes the bread, it is her duty to concern herself about how the baker makes it, and so with the milk, whether it be pure, clean and unadulterated. Likewise should she concern herself about a multitude of things which it is no longer practical or possible to produce in the home.

To quote once more from Mrs. Forbes Robertson Hale:

"We all believe in home, but I am tired of the word. In this country we have set up this fetich of 'home' and spell it with a capital H, yet I don't believe there is a country in the modern civilized world that cares for its homes worse than America. . . . It is not enough to be a mother inside the four brick walls of your home. . . . Even for the most selfish reasons we have to love others' babies as well as our own."

In this narrow American "home ideal" our men are quite as belated as our women. Perhaps no husband among civilized nations is more generous and indulgent with his material possessions than the American husband, yet withal he has not learned fully to respect his wife's personality and individuality. After all, he considers her to be more or less a part of his possessions. Because he supports her he is apt to feel it his right and privilege to regulate her ideas, interests and even most intimate convictions. And it is still doubtless true that a large body of American husbands prefer that their wives devote themselves to the old traditional "home interests"—occupy their leisure with dress, embroidery, playing bridge or similar vapid, ornamental pastimes within the home, rather

than with serious occupational or public interests outside of it.

In a word, while the vision of the average American man has been considerably widened of late years on certain industrial and political questions, he is still considerably benighted regarding the problems of home and the best type of womanhood.

Naturally, our proletarian class of both men and women is forced to take life more seriously. To them the various economic and industrial problems are of vital, everyday concern. Women of this class are forced to inquire why the cost of bread, meat and clothing has nearly doubled, while their earnings have increased so little in proportion; whether they are able to keep their children in school, to mark time with a system which is not fitting them for life and which will provide them with no employment when they are compelled to leave it. And even tho many of them realize that the ballot would give them only a slight and uncertain medium for expressing themselves upon certain of these questions, the more intelligent ones are, nevertheless, eager to possess it.

But it seems clear that there is a crying need for the great body of middle-class women, who really form our leisure class, to get into closer personal relationship with life—to know more of present-day needs and conditions. This seems particularly imperative for American women, inasmuch as the training of the children, during the age of greatest impressionability, is left almost exclusively to them.

Psychologists inform us that the nature and quality of instruction given the child at this age is of the utmost importance. It is the age when the twig is bent. If the mother fails to impart a sense of public duty and morality during this age, will it not leave a deep gap in the character and education of our youth?

We know that our women spare no pains to teach their children good, sound,

domestic morality—that one must not steal, swear, lie or cheat outright; also to be kind to the poor and unfortunate; but that one has grave duties to the state or community, that it is cheating to overcharge the community for service, that it is stealing to accept “rake-offs” in the disposal of public funds, that it is robbing to underpay workmen, that it is homicidal to overwork men or women in foul, dangerous surroundings which might be remedied, such ideas are not embraced in the ordinary woman’s code of morality. And if the boy acquires such ideas, it is usually not until he has passed from his mother’s influence and also passed the age of greatest impressionability.

May not this defective early education, in a measure, account for the fact that our leading public men often possess a keen, puritanic consciousness of domestic honor, yet lack utterly a sense of public virtue?

Professor Max Eastman in an article in *The North American Review* for January, 1911, says:

“Keep your mothers in a state of morbid remoteness from genuine life and who is to arm the young man with wise virtue?”

With our public schools almost uniformly neglecting their unquestioned duty of teaching public morality and an understanding of public matters, with our men given over almost exclusively to money-making, the rearing of the children is left to our women, who have almost no understanding or conception of public duty, obligation or righteousness. So, if our women shall continue to bear the responsibility of training our youth let us put civic and political responsibility upon them. With responsibility will come interest and awakened intelligence, which, with their domestic morality and experience widened to the community, and to larger public interests will improve the home and the home interests and eventually become a tremendously valuable economic asset to the State.

The Backward Nation

BY THEODORE MARBURG, LL.D.

[Mr. Marburg is president of the Maryland Peace Society and secretary of the American Society for the Judicial Settlement of International Disputes, and was chairman of the Executive Committee of the Third American Peace Congress held in Baltimore a year ago. He is the author of "The World's Money Problem," "The War with Spain," "Expansion," "The Peace Movement Practical," "Salient Thoughts on Judicial Settlement," "Philosophy of the Third American Peace Congress," etc.—EDITOR.]

AN ever-present menace to the peace of the world, and a present trouble, is the insecurity of life and property in backward countries, leading to intervention by foreign powers and to actual war. The problem before us is to find some means of sowing the seed of progress and civilization thruout the world without the sacrifice of life and the injustice which war involves. Unless we can do this, wars must and will go on. While civilization itself is external, races differ in their capacity to carry it forward. The dominant interest of the world is, therefore, the spread of the right blood, carrying with it primarily two things: the continued success and accelerated pace of man's struggle with nature (supplanting man's struggle with man), and the establishment of liberal practices which make, above all, for justice among men.

Such a means probably offers itself in the joint action of all the enlightened powers of the world, big and little, to secure equal rights and political liberty, and, as an incident thereto, security of life and property for the European races in backward lands. The most practical instrumentality may prove to be a commission appointed jointly by the chancelleries of such powers. A federal government of the world, like the federated states of the United States, of Germany, of Italy or of Switzerland, is not a matter of practical world politics at present, tho it would be rash to say that such a universal state may not come eventually. The project here suggested contemplates joint action with respect to the backward powers only. For any group of nations to attempt today to control by force the internal affairs of any of the great powers would lead to disasters immeasurably greater than the evils such action was designed to correct. They would resist

to the utmost any attempt on the part of the world at large to use force in regulating their home affairs. It would mean war on an immense scale, with immense disaster. Moreover, there is a possibility, by means of institutions other than this, to inaugurate the reign of reason as between the more enlightened powers. Certain institutions already in existence or projected should bring gradually the cessation of wars within this group. But will they prevent wars in which the backward nations figure either voluntarily or as victims? Respect of personal and property rights and more even justice can alone free the backward countries from internal disturbance, wars and the danger of subjugation. Was it not principally the fact that the Englishmen in Johannesburg had been inequitably taxed and at the same time denied representation at Pretoria that brought on the South African War? The present insecurity of life and property in Mexico in connection with the hundreds of millions of dollars which foreigners have invested there may force the United States, at the demand of foreign powers, if not of its own people, eventually to intervene and put an end to present conditions.

Expansion. It is exactly to such situations that the spread of empire is often due. The enterprising races have gone into undeveloped countries and the home country has been led to follow them up in order to protect them. In many instances it is this rather than any conscious policy of expansion that explains the growth of empire. Why is the fear of annexation to the United States, which some Canadians profess to entertain, so idle? The American who emigrates to a Canadian Province (to Manitoba or Saskatchewan, for example) finds his life and property quite as

safe there as in his former home. If we are candid we will admit that he finds there a more prompt and better administration of justice and therefore less lawlessness than in many parts of the United States. There is therefore no incentive for him to agitate for the annexation of such Provinces to the United States.

The number of people in the United States who consciously desire further extension of our dominion is negligible. If such extension comes it will be largely because of the operation of the forces to which we have referred, and, in addition thereto, to a demand on the part of foreign governments that we live up to our responsibilities in the countries which they are themselves estopped by the Monroe Doctrine from disciplining.

Race. The new institution is needed to deal with these problems and at the same time serve the ends heretofore largely promoted by force and by war, namely, the spread of enterprising and justice-loving races. War has filled human history with contradictions. It has done great damage to the cause of civilization and it has also been of great service to it. England's achievements in the epoch-making Seven Years War (1756-63) not only gave over the greater part of the North American Continent to the Anglo-Saxon race and to Anglo-Saxon institutions, but made possible the beneficent work of England thruout its vast empire. If the spread of a justice-loving and enterprising people is one of the purposes of history, surely Anglo-Saxon assertiveness has justified itself. Spain claimed the whole of the two Americas (excepting parts of what is now Brazil) by right of discovery, confirmed by Pope Alexander VI (1493). What would have been the fate of North America if the French, the English and the Dutch had respected that claim? Our answer lies in South America. Contrast the few contributions to human progress made by the Latin-American in the fields of literature, philosophy, the fine arts, mechanical inventions, law, political institutions, with the upbuilding work, in all these walks, of the people of the United States, of Europe and recently of Japan.

What would the condition of Cali-

fornia be today if its development had been left to the Indian and to the Mexican? At home and in America the English evolved principles of government which have influenced the whole civilized world. Today, every government of Europe and several governments of Asia, in theory if not in practice, are modeled more or less on the lines of either the English or American Government.

Political equality must probably be limited to the European or Asiatic races, as the case may be, in their respective lands. It cannot be extended to the one race in the home of the other race. This view is not based upon any prejudice against Asiatics, some of whom may even outstrip the white race in future in all that makes for progress, including invention, government, public justice and ethical ideals. It is based rather on experience which seems to show that the white race and the yellow race do not and cannot mingle successfully, that if they are admitted freely to the same countries it results in juxtaposition and leads to inevitable and frequent conflict.

Disinterested? Immediately the suggestion of such joint action is made the suspicion enters one's mind that the intervention proposed may not prove to be disinterested, may not in the end make either for justice or for peace. This doubt naturally arises from the history of similar leagues in the past. We are at once reminded of the oppressive and mistaken policy of the Holy Alliance (1815), which, under the leadership of Nicholas I served as an instrument for the suppression of popular liberties in Europe, notably in the case of the uprising of Hungarian patriots (1849), in which the Czar forcibly intervened in the interests of the Austrian Emperor. Our attention is drawn, next, to the shortcomings of the Concert of Powers. Despite its liberation of Greece (1829) and its helpful attitude toward the Balkan States, it has assented to the annexation by Austria of Bosnia-Herzegovina and connived at the absorption by European powers of Morocco and Tripoli and of free ports and spheres of influence in China, and the nipping in the bud of the promise of Persia's rehabilitation. The imperfections of other

leagues in the remote past, such as the Achæan League of ancient Greece, likewise come to mind. It will be asked whether, if a league similar to that here proposed had existed at the time of the struggle of the American Colonies for liberty, the just aspirations of America would not have been stifled.

The answer to such doubts lies (a) in the extent of the concerted action now proposed in contrast to the limited number of powers that have participated in similar leagues heretofore; (b) in the probability that under such a system just complaints would be heeded and insufferable conditions corrected without war.

If only a portion of the progressive powers are represented in a league, selfish interests may dominate and there is always danger of another group of powers arraying itself against the first group, thereby bringing on war on a vast scale. To make the proposed commission of the chancelleries of the world a success, it must represent not only the eight leading powers, but, as has been intimated, all the enlightened powers; that is, all the powers where there are just laws administered with a fair approximation to justice. It would include little powers who have no formidable armaments, powers like Switzerland, Holland, Denmark, Norway and Sweden, and Greece. In this hemisphere certainly Argentina and Chile, to go no further, should be included. United action by such a number of powers would probably prevent the triumph of the special interest of any single power or of any small group. One cannot but feel that substantial justice would be done by it, just as substantial justice is done under the Federal Government of the United States to the individual communities embraced within the scope of its activities.

If we agree to that statement—if we agree that the united will of all the enlightened powers, acting thru the commission, would result in substantial justice, then the main criticism of the project falls.

Effect. The effect of such an institution, designed to guarantee equity and political liberty in outlying countries, would be twofold:

First, it would impose justice upon backward countries from outside. Prob-

ably only on rare occasions would actual force be needed. The knowledge that the will of the whole civilized world is represented by the demands of the commission will be sufficient to force a lawless country to put its house in order. Today, when the rights of aliens in such a country are violated, the country in question may be moved to resist the demand for redress and for guarantees both by the chance of successful resistance against a single power and by the knowledge that it will have more or less sympathy from other powers in its resistance. Such countries are generally weak from a military standpoint, and a community of this description would be very foolhardy indeed to offer forcible resistance to the united demands of the civilized world. In other words, the potential force latent in such a concert of powers need seldom translate itself into war.

Second, if equal rights were secured to them, the enlightened and progressive races migrating to such countries should themselves be able to obtain laws and institutions making for security and justice. They need not constitute an actual majority of the electorate. In fact, it is ordinarily the minority that rules everywhere. The minority may represent the informed will of the people, as it does in the best governed democracies; or it may be a minority of the worst, who, thru cunning devices, have fastened themselves on the community—the condition of so many American cities. We see in such cities the rule of a minority of the worst made possible by the apathy of the majority. Their rule may be based upon the broadest kind of franchise, the success of this element being due to the failure of the electorate to exercise that franchise intelligently. In fact, it is the very extent of the franchise that makes possible the boss. But the important consideration is that where political equality does exist, unbearable conditions may be swept away without violent revolution. In the same way any large group of intelligent foreigners who allowed themselves to be oppressed under a system of political equality would have only themselves to blame.

If the proposed system had obtained in the Transvaal the Johannesburgers

could have remedied the evils from which he was suffering, the South African War would not have been, and the Boer Republic would still be in existence.

Take the case of Europeans in South America. The Germans in Brazil, admittedly of superior intelligence to the average Brazilian, already constitute an important group in point of numbers. If, under this system, they become sufficiently influential to control the Brazilian Government, such control would be effected without violent revolution, and would not interfere with the continuous existence of Brazil as an independent nation; for it is highly improbable that the Germans in Brazil would move for the annexation of that country to Germany, the more especially as the Monroe Doctrine would block the way. At this moment some of our American cities are admittedly ruled by people of foreign birth. Was violent revolution required to effect this control? Has it not all come about by reason of the fact that the immigrant is permitted to acquire citizenship, and, with it, the franchise?

The Monroe Doctrine. The Monroe Doctrine is charged with retarding the growth of South America by preventing the free influx of Europeans which would have taken place under actual European dominion. And the charge is true. To offset this manifest disadvantage we can, on the other hand, assert that the Monroe Doctrine has prevented and is preventing strife between European powers themselves for the possession of South American territory, as well as bloody wars against South American peoples, some of whom would undoubtedly put up a stiff fight against the most powerful enemy. True, Africa has been mapped out into European colonies and spheres of influence without leading to wars between European powers themselves. But the case is not quite analogous. The forbidding climate of the greater part of Africa has caused it to present no such temptation to Europe as does South America. Whether the Monroe Doctrine is a wise and a just doctrine or not, the fact remains that it has come to be a settled policy of the United States, and must be dealt with as such even by Americans who

may find fault with it. For the present the situation at home is so delicate that no European country is likely to make war on the United States on account of the doctrine.

National Life of Small Countries. We must face the fact that the governments of some backward lands are unable to maintain law and order and to administer justice, despite the best intentions. This is due to the character of the people governed. In such cases threat of intervention would, of course, be of little avail. Actual intervention would have to take place. And if the powers were called upon frequently to intervene they would be justified, after the exercise of the proper patience, in decreeing the suspension of the national life of such a country, which would then be administered by them jointly or placed under the temporary or permanent jurisdiction, as the case might be, of a single power. At first blush this appears to be a radical and dangerous departure from existing practice. But is it? Does the principle of nationality, embodying the ideas of the independence and equality of nations, prevent the national life of weak communities from being suspended or even extinguished at present? What about the successive partitions of Poland in the eighteenth and nineteenth centuries? In the new century, but just begun, what has happened to the Transvaal and to Korea? What is happening now to Morocco, to Tripoli and to Persia?

At present one country alone or a small group of countries intervenes and actually administers the government of a backward country for a shorter or a longer period. The United States administered Cuba until the Cubans showed signs of being able to maintain an orderly government. When, under the independent government then set up, anarchical conditions returned, the United States entered the island a second time and administered it until there was assurance that the voice of the Cuban people would be respected at the polls. It then again withdrew. Such fortitude and resistance to temptation are unusual in history. Neither the European nations nor we ourselves can be counted upon generally to exercise them. If, now, intervention on the part of a

single country or of a small group of countries should come at the mandate of all the enlightened powers, is there not a much greater likelihood that the temptation to remain will be resisted, and that therefore the national life of the small powers will in the end be more secure than at present?

In the Two Americas. When we come to the two Americas, the Monroe Doctrine would indicate the use of the United States as the sole agent of the powers in cases of intervention. We would then be doing no more than we now do, but when we went into a country where insufferable conditions prevailed it would be under the mandate of the powers and as their accredited agent. This should have the double effect of freeing our motives from suspicion and of giving us a just claim upon the powers for their share of the expenses of such undertakings. Our responsibilities under the Monroe Doctrine, growing constantly with the increasing number of Europeans in the various Central and South American countries, are already very great. The discharge of them will likewise involve more and more expense as time goes on without bringing any adequate business return and certainly no return in the shape of increased friendship on the part of the people of the country in which we intervene nor of the peoples of other South American countries, who regard such acts as an invasion of sovereignty and feel that some day their turn may come. Again, such a plan would enable the United States to shift some of the responsibilities which it at present has under the Monroe Doctrine to certain other of the American republics in the neighborhood of the disturbed conditions. For example, Argentina can muster 700,000 men who have seen at least two years' service with the colors, and have been said by the German Emperor to constitute one of the best of modern armies. It is likewise building an effective fleet. So far as concerns that neighborhood, why may not the responsibility to European powers which the Monroe Doctrine imposes on the United States be delegated to Argentina? The United States would retain the hegemony of the American Continent and at the same time design-

nate another power to act for it here and there, such intervention, it will be remembered, being at the mandate and at the joint expense of the civilized world.

What Justification? Is it fair, it will be asked, to impose the united will of the nations upon a backward and weak country in the face of the full knowledge that similar action cannot be taken against powerful countries? Why, for example, should the world tolerate in Turkey massacres of Armenians, in the United States lynchings accompanied by the unspeakable barbarity of burning men at the stake, in Russia steady denial of justice, and in Germany imprisonment for *lèse majesté*, while penalizing similar acts under feeble governments? Why should the latter group of countries be forced to mend their ways when unjust practices in these great countries are suffered to go on?

The answer is not simple. We must start with the frank admission that such an attitude does not embody ideal justice. But at present we already witness intervention in the backward countries because of anarchical conditions, and actual foreign conquest of such countries from time to time.

Governments call such wars righteous wars. Now, the difficulty about the theory of righteous wars is the question, "Who is to determine righteousness?" Every nation thinks its cause is righteous. If it is a big nation and a powerful nation it knows its cause is righteous and can prove it. Let this principle prevail, let the holier-than-thou group prowls around the world seeking a chance to discipline the backslider, and society becomes a Donnybrook. The practice can be discouraged only by devising something to take its place.

We are, therefore, not provoking a situation, but are attempting to deal with an unpleasant actuality. It is for the double purpose of making possible the expansion of race without war and of making more secure in the long result the national life of backward countries that the joint action of the powers with respect to them is proposed. In other words, intervention by the powers jointly, leading to the preservation of independence where possible, is certainly preferable to the present regime, with its

manifold crudities and temptations. The charge of inconsistency must likewise be met by the further fact that in most of the great countries the general and normal conditions make for progress and justice. The instances of injustice they afford are more the exception than the rule. So much attention was attracted to the Dreyfus affair just because such cases are rare in France.

In final justification of the failure to treat all alike, we may urge the very practical consideration, already mentioned, that the will of the nations can be enforced so as to make for greater justice and better conditions in the feeble countries and cannot be so enforced in the powerful countries. In other words, the fact that the civilized world cannot take conscious joint action for the betterment of conditions everywhere does

not excuse it from acting where it can. Now, joint action by the powers to suppress lawlessness, and in a measure save the national life of backward communities, will not end conquest. The general decline of war will not stay it. Conquest will go on. But it will be conquest by the spirit—life-giving, not life-taking; the conquest of ideas and ideals embodied in institutions and in upbuilding practices and spread over the world by the races that show capacity to entertain and further them. "When you bring praises and flowers to the conquerors of Porto Rico," said Frederico Degato, shortly after our easy capture of the island, "bring them not to your soldiers, but to the men who wrote your Declaration of Independence, to the men who framed your Constitution."

BALTIMORE, MD.

Has Judaism a Future in America?

BY ISIDOR SINGER, Ph.D.

[Dr. Singer is the originator and managing editor of the "Jewish Encyclopedia" and the Hebrew Classics." He is the author of many works in German and English.—EDITOR.]

FORTY years ago the American Synagog was considered by the European Jewry as *quantité négligeable*; of about the same importance, numerically and spiritually, as the Asiatic and African territories. The learned rabbis and powerful communal leaders of the Old Continent of that time looked upon the Jewish congregational life in the United States with the same mien of condescendence as the Italian, French and Spanish bishops upon their Yankee colleagues of the same period.

Times have changed. The Vatican creates cardinals *en masse* and the greatest Jewish scholars and writers of Russia, Austria and Germany are crossing the ocean to study the religious and communal life of their 2,000,000 American brethren. Nearly all of them trace melancholic pictures of the imminent dissolution of the West European Jewries, while extolling the splendors of the American Synagog, seeing in it the

leader, in the very near future, of the entire household of Israel.

To give two concrete instances only: Claude G. Montefiore, the founder of the liberal branch of the English Synagog, had to import a young American rabbi from Far Rockaway, and Rev. Dr. Joseph Hertz, the eloquent and learned rabbi of the New York congregation Orach Chajim, leaves upon a semi-official invitation of the United Synagog, comprising the sixteen principal synagoges of the English metropolis, on April 18 next for London in order to press his candidacy as successor to the late chief rabbi of the British Empire.

There cannot, of course, be the slightest doubt that the Synagog of the United States harbors unbounded potentialities. Census and Bradstreet are in our favor. We are 2,000,000 now, and since nine Jewish immigrants out of ten are healthy, sober, intelligent, energetic, have a sacred, quasi-atavistic horror of gun,

dagger and blackjack, and the Jewish philanthropic institutions are, moreover, taking ample care of their own poor, even the most rabid anti-immigrationists will, in the end, welcome the brethren and cousins of Jesus and his apostles as one of the most desirable elements of the American commonwealths.

While the Jewish people, taken as a whole, is the poorest people on earth—among the 7,000,000 Jews in Russia and Austrian Poland, forming about 60 per cent. of the total Jewish population of the six continents, there are at least 6,000,000 whose entire individual properties do not amount to \$25 on the average—the American Jews are fairly prosperous. I mean to say that, while we are cutting a very poor figure among the Upper Four Thousand in Multimillionairedom, we have relatively few paupers among us. I further admit cheerfully that we have 300 to 400 beautiful synagogue buildings thruout the country, with about as many well-paid rabbis; we have a great number of splendidly equipt hospitals, orphan asylums and other charitable institutions; we have three richly endowed theological seminaries and colleges; but—and here I give the floor to Rabbi Leo Mannheimer, of Paterson, a young, intelligent theologian, born and bred in this country and a graduate of the Hebrew Union College of Cincinnati, who published in a recent issue of the conservative *American Hebrew* of New York an ardent appeal to American Israel which, in some spots, hits the nail upon the head:

"It is quite evident that among the younger men in the American-Jewish pulpit today, there is a spirit of unrest and discontent. This discontent plainly evinces a recognition of imperfections in the present congregational system and methods.

"While the indifference, apathy and materialism of our young Jews are blameworthy and somber with menace, perhaps the fault does not lie entirely with them.

"Is not the indifference to be found on both sides? Is there not a certain smug contentment if the synagogue property is free or nearly free of debt, if the service is fairly esthetic, and if the cemetery is producing a good income? Do not these evidences of material prosperity seem to be the entire object of the directorates of many congregations?

"Such congregations, however, do not pay sufficient dividends to warrant sacrifice, zeal and interest on the part of their members.

Unless they make Judaism a living and vital force in the community; unless they can attract to themselves the life, intelligence and enthusiasm of the younger element they clearly fail."

And Rabbi Mannheimer winds up with the proposition to start a kind of Jewish Men and Religion Forward Movement.

So far so well. The diagnosis of our young theological friend is all right, but neither his nor the therapeutics of his rabbinical colleagues taking part in the symposium on this question organized by the periodical mentioned above contain the curative elements necessary for a complete recovery.

It is as clear as daylight that no Church, above all on this progressive American continent, can live on its past exclusively. Over 150,000 Christian clergymen of all denominations are working seven days in the week to fill their churches for two or three hours on the Day of the Lord, when almost the entire commercial and industrial machinery is at rest, and therefore makes it possible for nearly everybody who is really hungry for the word of God to get it free of charge and around the corner. And what does ecclesiastical statistics teach us? Sixty-three per cent. of the total population never set their foot in the Christian houses of God unless they are carried there as infants, corpses or—bridegrooms.

And the situation in the synagogue is an analogous one. The West European Jew, since 1848 (*i. e.*, since he left *his* ghetto, where Judaism was not theoretically taught and preached during the winter months once a week for a couple of hours, but was lived for twenty-four hours a day during the whole year), and the Russian Jew, since he began to step from *his* Pale of Settlement into the great, free world, both are throwing off gradually one Biblical and Talmudical commandment and tradition after the other. And when rabbi, communal leader or some idealistic free lance appeals to the well-to-do Jew, old or young, in his Riverside mansion or in his Broadway office, in behalf of the higher spiritual interests of Judaism, in nine cases out of ten he stares at you, amazed at your *naïveté* or pitying you for spending so much effort and enthusiasm in a false direction.

A Jewish Men and Religion Forward Movement? Yes. But it must bear a well-defined, burning message appealing to the hearts and minds even of the most apathetic Jew, and not clashing with his social pretensions and economic interests; a message which would give a meaning to our suffering in the past and justify the continuance of our separate existence in this antiseparatistic modern world of ours.

It makes you laugh when you hear our pontiffs of native and imported Jewish pseudo-orthodoxy sneer, both at the great Hebrew prophets of old and those who are ready to devote their lives to make again of their sublime message the message of our age. These modern Pharisees bury themselves in their dusty folios not to see the living world around them and not to be seen by it. They are the medieval scholastics of Judaism, the gravediggers of the synagogue. Happily, however, we have among the teachers and graduates of the great progressive school of Cincinnati, among the graduates of the European institutions and of the old New York Jewish Theological Seminary, men who have fully grasped the needs of our time and are willing and able to translate the teachings of Isaiah and Amos and Malachi into twentieth century parlance. Men such as Dr. K. Kohler, of Cincinnati, president of the Hebrew Union College and undoubtedly the greatest living Jewish scholar on this continent; Dr. Emil G. Hirsch, of Chicago, the Bossuet of the American Synagog, and Dr. S. Schulman, of our city, president of the Central Conference of American Rabbis—to quote this representative trio only—have certainly the intellectual power to work out, in harmony with their numerous colleagues of talent, both in the progressive and in the

sincerely orthodox camp, an acceptable platform for the American Synagog of the future. But to make of it a living reality they must also have the moral courage to take off their kid gloves and to knock down without pity the false idols. And finally, they must be put into the possession of the necessary means to start on a world-wide campaign, making again, as at the times of Philo, Jesus and St. Paul, the synagogue the center of a religious world movement, teaching this time, without the cover of Greek metaphysics, monotheism pure and simple.

The liberal Christianity of the twentieth century is miles beyond Thomas Aquinas, Luther and Calvin, and has even—partly at least—outlived the theology of the middle of the last century. The world, and at present it is no longer the diminutive Greek-Roman world around the Mediterranean basin, but the globe at large, including two-thirds of Asia and the greater part of Africa, is again waiting for a message of salvation. It came once from Judea. Why not a second time?

May the skeptic call it as he pleases. But I cannot suppress the thought that divine providence must have had some reason for transferring just to this land of promise and at this critical period in the evolution of religion the best elements of the old European Jewries. Or, to tell it bluntly and to sum up my whole thought in one final sentence: *I am convinced that there is a brilliant future for Judaism in America, but on one condition only, that it give up once and for all its village church policy and take the trouble of reinterpreting to the world the original gospel of Jesus of Nazareth in the light of the old Hebrew prophets and of modern philosophy.*

NEW YORK CITY.

Eugenics in England

BY HENRY JAMES FORMAN

[The first Eugenics Congress, which will be held July 27 in England, promises to be of great interest. In anticipation of that event we publish this article by Mr. Forman, the well known American editor, journalist and author, now in London.—EDITOR.]

“IF I were ruling America,” Prof. Karl Pearson said, “I should close it up and not let another soul enter the country until all the ingredients of your nation have a chance to mix. It is of the first importance for the people to become homogeneous.”

Happily for the thousands and hundreds of thousands that yearly come to our shores, Professor Pearson is not ruling America, but it would be a serious error to treat his opinions lightly. He is the most difficult man in Europe to “interview,” and from me he should not win renown, but that he is at the head of the National Eugenics Laboratory in London, and stands forth, undoubtedly, among the foremost workers in the youngest of the sciences. And that science has need of workers.

For the strain of England, that masterful strain that conquered by land and by sea, that carried civilization to the remotest parts of the globe and founded colonies that have become great nations, is certainly deteriorating. The South African War brought that home to England more sharply even than the persistent commercial and industrial decline that has been progressing for some time. The birth rate has been falling alarmingly since 1877, and statisticians declare that at the present rate England will be in the position of France before 1930—her population will have ceased to reproduce itself. Obviously some steps must be taken to prevent this headlong decay.

Now, the late Sir Francis Galton was led by his studies in heredity to foresee to a certain extent the present conditions. It was he who coined the word “eugenics” (in his book “Human Faculty”) so far back as 1883, and he who about eight

years ago endowed and founded the laboratory in University College, London. Professor Pearson, who was already carrying on work in a biometric laboratory, naturally suggested himself as the logical director of the new foundation, and he accepted the post.

That Galton Laboratory in Gower street is not one of those palatial buildings where many an American student learns the elements of the sciences. It consists of three somewhat dingy, cramped, narrow rooms, where Professor Pearson’s staff is laboriously carrying on its researches. And those researches form, in the opinion of many, some of the most important scientific work now being done in England.

Eugenics was defined by its founder as “the study of agencies under social control that may improve or impair the racial qualities of future generations, either physically or mentally.” In other words, it is the study of biology directed toward the highest animal in the scale—man. Prompted by the certainty that man can be thus studied with a view to racial improvement, Galton founded the laboratory, and prompted by the same certainty, Professor Pearson and his staff are devoting their lives to the work. The staff is a small one. It consists of Dr. David Heron, Galton Research Fellow; Miss Ethel Elderton, Galton Research Scholar, and Miss Amy Barrington, computer.

The business of these workers is simply to study and to publish the results in a series of memoirs. For eugenics, in the words of Professor Pearson, “has to educate public opinion until without a despotism he (the legislator) may attempt even the mildest purgation.” To

produce, he adds, "a nation healthy alike in mind and body must become a fixed idea—one of almost religious intensity, as Francis Galton has expressed it—in the minds of the intellectual oligarchy, which after all sways the masses and their political leaders." From this it is clear that Mr. Pearson is an optimist, and that is fortunate, for he has great need to be, in view of his discoveries in the course of these studies. One of the most startling of these discoveries is that relating to the selective death rate.

Without involving the reader in too much technical language, it may be stated thus: All the vast development of our modern institutions for taking care of the halt and the maim, the weak, the imbecile, the infirm, has virtually suspended the selective death rate. That is, instead of allowing Nature to kill them in the old way, we, on the contrary, protect and preserve the unfit to the best of our ability. To counterbalance our charity, it follows that we should pay at least as much attention to the "selective birth rate." That is, to provide that the great majority of births should be among the fittest members of our race. There, and there only, lies the hope of national efficiency in the future. But in point of fact, whatever provision has been made, has had an almost opposite effect. "The whole trend of legislation and social action," declares Professor Pearson, "has been to disregard parentage and to emphasize environment." And every improvement of environment has lowered the death rate and increased the net birth rate of the unfit. Associated with this has been the steadily decreasing birth rate of the fit.

The classic cases cited by Professor Pearson are certain towns and districts of England, which he has studied by a method he hopes to apply to all England.

In a town called Huddersfield, given to the manufacture of woollens, he found that the birth rate began to fall slightly as early as 1867. But in 1877 it plunged down sharply to such an extent that by 1907, in thirty years, the births had decreased from more than seven to less than three per family.

Bolton and Bradford, two other manufacturing towns, while showing little or

no change in 1867, both show a marked decline from 1877 on, and the number per family similarly decreases from something like seven to the neighborhood of three.

Cornwall and Norfolk, rural districts, show no change in 1867, but a marked and rapid decline from 1887 on. Thus, even from these greatly condensed statistics, we cannot help seeing that 1867, 1877 and 1887 are ominous dates, so far as the English birth rate is concerned. What, if anything, is the obvious query, happened in these particular years to cut so deeply into England's population?

This is what happened: *A number of factory laws were passed regulating and restricting the employment of women and children.* Let us see how this affected the birth rate.

From 1864 to 1867 were passed a number of factory acts that culminated in the Workshop Regulation Act of 1867. These acts applied especially to textile works and to certain other industries, like copper, iron and steel. They provided that no child under eight could be employed in any handicraft, and between the ages of eight and thirteen only half time was permitted. And that was the reason the birth rate of towns like Huddersfield began to show a decline in 1867.

Now we must glance at the far more important date of 1877.

In 1874 Parliament raised the minimum age of the child laborer to ten, and in 1878 an act went into effect that seriously discouraged the employment of children. Only half time was allowed between the ages of ten and fourteen, and even the employment of the child at home was covered by this act, which also demanded medical certificates. The board schools were created in 1870, and in 1876 attendance at school for children was made compulsory. Also, the trial of Charles Bradlaugh and Mrs. Annie Besant did much to spread Malthusian ideas. Then set in the heavy decline that persists to this day.

The Mines Act of 1887, prohibiting boys under twelve to work underground, the further raising of the age at which children might work in 1891, and even subsequent laws aimed against child

labor, show a record of legislation of which England or any other country might well be proud.

But England's population has been sinking so rapidly that another fifteen years will make Britain resemble France. The population will not be reproducing itself. The child, in short, had ceased to be an economic asset. It was no longer of pecuniary value. Children had ceased to pay. Professor Pearson concludes:

"The factory acts in no manner assisted the rearing of those children, who were forbidden to make their parents any pecuniary return for thirteen to fifteen years. The father was handicapped in the struggle for existence as against the childless man. In the same manner the mother was directly and indirectly handicapped as compared with the childless woman. Economically, parentage was placed at a great disadvantage in the battle of life. Such was the result of a class, the children of which are not economic assets, making the laws for a class in which children had from an early age had pecuniary value."

Such is one set of facts that the eugenicist today is collecting, collating and putting before the English statesman. For no mere fact like this is of any use unless it leads to action. Will a statesman arise who will be sufficiently clairvoyant and disinterested to work, not for the immediate present, but rather for the generations to come after? That is what the eugenicist hopes. No such statesman has arisen as yet, at all events, and when he does, his hands will not lack for work to do.

For intertwined with the falling birth rate are two further glaring, staring facts in England. The fit are not reproducing themselves, and the unfit are flourishing more prolific than ever. In other words, the population is not only decreasing, but also deteriorating.

So far back as the late forties, Emerson, with the eye of the seer, saw that for England, as for others, "the best political economy is care and culture of men." That, however, seems the last point to be regarded by modern statesmanship. President Eliot, of Harvard, a few years ago expressed alarm over the fact that Harvard graduates were not reproducing themselves, so small were their families. Well, the same, more or

less, is true of England. Professor Pearson gives the average size of the English intellectual's family a figure of 4.7. For the normal London artisan he calculates the figure to be 5.1.

A glance at the statistics of the so-called pathological classes shows a marked difference. Deaf mutes in England show a family of 6.2 children; insane, 6.0, and London mentally defective of 7.0 children per family.

What is to be the remedy? Says Professor Pearson:

"If we can give the child economic value, the birth rate will rise; if we can differentiate between the economic values of good and bad parentage, if we can make the possession of healthy, sound children a greater economic asset than the possession of feeble offspring, then we have for the mass of the people solved the problem of practical eugenics."

Laws penalizing parentage among the fit must be reversed.

That all this is the reverse of simple the reader will readily concede. Yet public opinion must be educated to make the ideals of the eugenicist realizable. To promote this education of public opinion is the object of the Eugenics Education Society. The membership of the society includes some of the foremost names in England. And for this summer the society has arranged the First International Eugenics Congress. Says the prospectus:

"It is hoped, by means of this congress, to make more widely known the results of the investigations of those factors which are making for racial improvement or decay; to discuss to what extent existing knowledge warrants legislative action."

America, France, Germany and Italy will be ably represented, and beyond a doubt eugenics will have a hearing during the coming July to an extent it has not had before. Indeed, there has scarcely been time, so young is the science. Yet the need of it has arisen, sudden and imperious. At this moment the society is pushing a bill in Parliament to assure the control of feeble-minded persons. For no feeble-minded person in England, if over sixteen, can be touched by the law unless he or she be a raving maniac or complete imbecile.

Said Major Leonard Darwin, the society's president, in his last address:

"We may believe we see vast possibilities in the future before us; but for the present we must have patience. As an example of the kind of problem which ought at once to be considered, State aided contributory maternity insurance may be cited as an arrangement which the thrifty would make

most use of, and which therefore would tend to accelerate the multiplication of the careful more than the careless."

The truth is, the science is not yet clear as to its points of attack in the field of reform. But daily it is gaining fuller knowledge.

LONDON, ENGLAND.

Givers

BY EDITH M. THOMAS

How many givers have been good to me,
 Ev'n from that mystic hour my first of light
 When One I knew not gave this life in fee;
 And thence what gifts were showered—what radiant might
 Of mother-love, what shield of father-strength
 Thru childhood's days of happy, fabulous length!

How many givers have been good to me:
 All playmates, comrades of the Land of Youth,
 Whose morning-eyes so well I yet can see!
 And, if outstripped, for you what tenderest ruth—
 For you, who ran with me the lamplight race,
 Who lent your flame to mine with selfless grace!

How many givers have been good to me:
 All guides who put the pilgrim-staff in hand,
 Who gave to treasure-houses great the key—
 The magic word—that opes the doors where stand
 Those old immortals who have traced bright scrolls
 Inscribed with songful lore for thirsting souls!

How many givers have been good to me:
 They who poured praise—or in the cup of praise
 Dropped amethyst that I not slave should be
 To the quick wine nor to the wreathen bays.
 Oh, ever I in thankfulness must bend
 To those who had both Truth and me to friend!

How many givers have been good to me:
 Not least of all that I shall ever know
 I cherish them who sweetly could agree
 To take the benefits I could bestow,
 Who envied not, but let me have the joy
 Of being almoner in high employ!

L'ENVOI

How many givers have been good to me:
 All who have loved me—thou, of all, the most!
 May this song reach thee—thou, past tears, set free,
 To whom shall say Love's unseen, smiling host,
 "Yon singing soul mounts up because of thee!" . . .
 How many givers have been good to me!

NEW YORK CITY.

The Wisconsin Idea

THE "Wisconsin Idea" is the child of popular government and public education. It attempts to combine control of policies by the people (without interference by a selfish organized machine) with scientific administration of public problems (without contamination by fraud or spoils). Its union of direct control with expert service has given rise, in the mouth of the leading educator of the State, to the aphorism that Wisconsin is interested in *political science*, with the emphasis on science. For more than a decade, now, the progressive forces have been at work in this Western commonwealth, and if the result were not worth inspecting on its own account it would still need to be exploited to satisfy a curiosity respecting its character that has come to exist in other States. Dr. Charles McCarthy, who thru the whole decade has been the trusted adviser of legislatures, now sings the praises of the *Wisconsin Idea* in his book of that name;¹ and with a sketchy enthusiasm he describes the laws that have made Wisconsin famous, and the method of their making. Frederic C. Howe discusses the same *Experiment in Democracy*,² in terms that glow as brightly as those of Dr. McCarthy, but he does it from the standpoint of resulting institutions rather than from that of legislative process. What the Wisconsinian thinks of the rest of the world, from his vantage point in a chair in the State University, where he is encouraged in "that continual and fearless sifting and winnowing by which alone the truth can be found," may be seen in the book, *Changing America*.³ Here Prof. E. A. Ross analyzes the social tendencies of today, and reprints his vivid chapters on the "Middle West."

A positive platform of social and eco-

nomic reform, from the Wisconsin standpoint, is contained in President Van Hise's *Concentration and Control*,⁴ just off the press. A work of "opportunism," as he describes it, he has tried to strike while the iron is hot, and to forge a public tool that will satisfy the soul of a distressed nation as well as serve its need. He traces the course of competition and combination, and the efforts to prevent the trust. Frankly, he admits the advantage of combination and co-operation, but he asserts a public interest in "businesses which restrain trade to such a degree as to control the market." Much of this control may be for the public's own good, but of this the public ought itself to be the judge. Accordingly, President Van Hise would administer this interest thru a series of expert commissions which should at once encourage reasonable concentration of industry and save the individual from oppression, greed and crime. The book is sane and thoughtful. It contains the best existing summary of the trust problem, entirely apart from its proposed solution.

The service to be rendered to a people thru the broadening of government is the flesh of the "Wisconsin Idea." Most of government is at bottom a scientific matter, to be placed in commission and handled by experts. To secure an absolute and direct control over these activities is an equally fundamental matter, and the dry bones of the "Idea"—the mechanical skeleton upon which it hangs—may be dissected from those devices which have suddenly been improvised to bring back into the hands of the people their own institutions. These are the initiative, the referendum and the recall. Upon none of these reforms is there a literature of long duration, but Professor Munro has collected from current literature a symposium of papers that explain them fully.⁵

¹THE WISCONSIN IDEA. By Charles McCarthy. New York: The Macmillan Co. \$1.50.

²WISCONSIN, AN EXPERIMENT IN DEMOCRACY. By Frederic C. Howe. New York: Charles Scribner's Sons. \$1.25.

³CHANGING AMERICA: STUDIES IN CONTEMPORARY SOCIETY. By Edward Alsworth Ross. New York: The Century Co. \$1.20.

⁴CONCENTRATION AND CONTROL: A SOLUTION OF THE TRUST PROBLEM IN THE UNITED STATES. By Charles E. Van Hise. New York: The Macmillan Co. \$2.

⁵THE INITIATIVE, REFERENDUM AND RECALL. Edited by William Brewster Munro. New York and London: D. Appleton & Co. \$1.50.

In these mechanical reforms of government, and in the vision of service which the "Wisconsin Idea" sees, we have a new platform for the rejuvenation of democracy. It is not a Jeffersonian democracy, to which, tho all men are equal, all government is bad. It is, instead, a recrudescence of the virile democracy of Jackson, based upon a confidence in the sobriety of the plain people. But it departs from the Jacksonian practice in that the new democracy no longer thinks that any man is fit for any office, whatever his training. It believes instead in permanent and expert service, absolutely divorced from politics. And herein is the reason why most politicians over fifty cannot understand it. It is not necessary for us to agree with all the planks in the Wisconsin platform, and we cannot feel that either Mr. Howe or Dr. McCarthy is free from the limitations set by unmitigated enthusiasm. But the "Idea" is abroad, and in its essentials we cannot, even if we would, avoid considering it.

Legal Doctrine and Social Progress. By Frank Parsons New York: B. W. Heusch. \$1.50.

A book may have misleading, exaggerated, false statements, and yet be stimulating and not entirely useless. Mr. Parsons's posthumous book is an example. Its spirit is fine; its reasoning sometimes is. He says that among some ancient people the criminal law was practically 100 per cent. of the whole. But was it so in the Mosaic or in the Babylonian law? Further, he says that today criminal law is less than one per cent. of all. He regards the criminal law as scaffolding for the building of the new co-operative nature; when that is built, we are to pull away the scaffolding. Now, as a matter of fact, if any criminal law has died, it is because the crime has ceased to be possible or is no longer a crime, as heresy or lese-majesty, and further, the scope of the criminal law has very much extended, as for embezzlement and forgery; mankind has not discarded many crimes as uninteresting or bad form. The true statement would be that the proportion of criminals to the entire population is probably less today

than it once was. Then, again, a cynic might say that whereas at one time there was but one criminal in the world, there are now several! Again, Mr. Parsons leads the blind to the old fallacy that as there are "several hundred bulky volumes" of decisions and precedents issued by forty-six States, and many English speaking jurisdictions, a judge may find a precedent in any one of them to form his decision in the case before him to his own sense of justice. In reality this is nonsense; a Massachusetts judge has to follow the precedents of his own courts and the United States courts. They are as scripture; he may be fortified in doubtful cases by an Oklahoma case, but the Oklahoma case is not authority; it is more like commentary; certainly, it is not scripture in Massachusetts.

An Introductory History of England. By C. R. L. Fletcher. Two vols. Pp. xvii, 583; x, 351. New York: E. P. Dutton. \$3.50.

Mr. Fletcher is a versatile and somewhat erratic devotee of Clio. He has done serious and valuable work, notably in editing Carlyle's "French Revolution." More recently he collaborated with Rudyard Kipling in producing a history which should have the effect of cultivating feverish loyalty—or shall we say jingoism—in the breasts of the young Britons who read it. The volumes now under review were written for those boys who find history intolerably dull. The author says:

"My own view is that English history should be an inheritance from childhood; that its legends and its romance should grow into our thoughts from very early years, and should expand themselves with the expansion of our minds; that we should feel history and dream it rather than learn it as a lesson. . . . For English history as part of a school curriculum, or as a means of education, I have no such regard at all. Education is not the acquisition of information."

Holding this rather old-fashioned opinion and possessing both an easy style and a good control of his materials, Mr. Fletcher can never be accused of dullness. American readers will find no other elementary book on English history quite so entertaining. It is full of surprises. The story of Waterloo is told in three apocryphal letters, all of them

lively and ingenious compositions. Nothing worth while seems to have happened since Waterloo. The author has "little heart to follow my hero, Castlereagh, as he fights his gallant and losing battle against the forces of democracy." He does not like the so-called reforms and movements of the past century; for they have, he believes, two mainsprings, "first a desire to increase the material welfare of the mass of the people, and secondly, an echo from across the channel about 'Natural Rights' and 'Government in Accordance with Principles.'" We are left in little doubt that England has made a shameful conquest of herself! But until its tragic close the book does much to divert the reader, as by the chapter headings, which occasionally take the form of a bad pun or of a Greek or French quotation. Not that the pill is all sugar; tho easy to take, it will do as much good as some bitter medicines.

Great Educators of Three Centuries. By Frank Pierrepont Graves. New York: The Macmillan Company. \$1.10.

Professor Graves, the author of a comprehensive *History of Education*, the third volume of which is in preparation, *Great Educators of Three Centuries*, is biographical in its character and contains much interesting material not properly belonging to the historical survey given in the more extended work. The men of original genius as educators are discussed and the influence of their work on modern education neither minimized nor exaggerated. The author begins with that stout Puritan, John Milton, and his *Tractate of Education*, and closes his list of great educators with the name of Herbert Spencer, passing in review Bacon, Ratich, Comenius, Locke, Francke, Rousseau, Pestalozzi, Herbart, Froebel, Mann, and many far-sighted and far-thinking schoolmasters less known to the unprofessional reader, during the seventeenth, eighteenth and nineteenth centuries. A very interesting suggestion of the book is of the swift transmission of ideas, a seed-thought blown on the wind from country to country, taking root in a new soil, and flourishing there better than in its first habitat, in some instances; rotably in the surprising fact that the kinder-

garten of Germany, the land of its origin, is inferior to that of other countries. A critical comparison between Pestalozzi and Herbart, shows Professor Graves's insight into the essential points of the teaching of each. Students of pedagogy will find this introduction to the personality of great educators more attractive than the study of abstract theory.

History of Ethics Within Organized Christianity. By Thomas Cuming Hall, D. D., Professor of Christian Ethics in Union Theological Seminary. New York: Charles Scribner's Sons. \$3.

In this scholarly work the student of Christianity is furnished with a serviceable and much needed guide to the changes and developments in ethical theory which have characterized the various epochs of Christian history. Professor Hall's excellent survey covers the Greek, Roman and Hebrew conceptions on which early Christianity was ethically founded and nourished, and extends to the age succeeding Hume and Kant, when the unstable post-Reformation systems were shattered by the decay of authoritative, absolutism, and ethics became a subject of scientific investigation and construction. The scope of the book makes impossible the record and discussion of details, but the generalizations are based upon a careful examination of the available sources, and the judgments are broad and fair-minded. In the first part of the volume the syncretistic character of Christianity is clearly revealed and the gradual substitution of dogmatic and ecclesiastical interests for ethical passion in the developing organization is faithfully and sometimes strikingly set forth. Yet the later history emphasizes the fact that the ethical elements are the most permanent and powerful, and shows how their leavening force has been breaking one by one the old fetters of authoritative narrowness and exclusion until there is no longer a dividing line between sacred and secular, and religion, instead of being the source of moral distinctions, must itself be measured and judged by ethical standards. Professor Hall's own intense devotion to the simple ethics of Jesus—now after centuries of ecclesiastical obscuration again coming to its

own—shines thru every chapter and enlivens many a page that would otherwise be dreary reading.

The Fool in Christ. By Gerhart Hauptmann, translated by Thomas Seltzer. New York: W. B. Huebsch. \$1.50.

Emanuel Quint is an elusive figure and to the reviewer an unpleasant one. If he is intended by Hauptmann, as appears, to represent Christ returned to earth and seeking a parallel destiny in Germany to the story of the life lived in Palestine; or if he is simply the "pure-hearted Fool" of Parsifal, sensitive to the beauty and divinity of the central figure in the Gospels, and eager to follow in His footsteps to the least detail, there is in either case too much insistence upon his weakness, irresolution and vacillation. We pity Quint, and feel the charm of his gentleness and sweetness of nature, but we cannot admire him. He is too feeble a character, too uncertain of himself and of his message. He is not only ignorant of life; he is terrified at it. He cannot understand himself, and the reader shares his bewilderment. Hauptmann is very clever in his suggestion as to the ease with which a Quint myth grew up around him and worked upon his troubled brain until he himself believed it. But he seems to have apprehended only one side of Christ's character as it has been preserved for us in the Gospel narratives; he misses altogether its elements of dignity and strength. Quint is more like Parsifal than Christ; more like the unhappy, self-tormenting hero of "Hilligenlei," by Gustav Fransson, than like the man who "spoke with authority and acted without hesitancy." Both Fransson and Hauptmann miss the serenity and sanity of Christ's character.

Love's Crucible. By Mary Shepardson Pomeroy. Boston: Sherman, French & Co. \$1.35.

This story has the double interest of being the posthumous work of an able, thoughtful woman, and also the author's first and only novel. The story is that of a waif, left carelessly to the scant mercy of a grasping boarding-house keeper; rescued from drudgery and given a few years of schooling by the still scantier mercy of a man of pleasure,

only to become his mistress; and later, thru an automobile accident, brought for the first time so effectually under the purifying influence of a Christian home as to awaken within her a soul. Thru the ennobling love of a good man she resolves to redeem herself, and by hard work, manual, mental and spiritual, and after struggles, discouragements and temptations, she finds, at last, friends, relatives and home, and strength. Mrs. Pomeroy was the wife of a well-known Boston physician, and the daughter of Dr. Shepardson, founder of the Woman's College of Denison University. The spiritual power of this book gave promise of greater success as a writer had her life been spared.

American Permian Reptiles. By Samuel W. Williston. Chicago: University of Chicago Press. \$2.50.

Professor Williston is not one of those paper paleontologists who from the fragment of a single fossil will construct an entire theory of evolution with a system of cosmical metaphysics on top of it. Altho no one is better qualified to speak with authority in this field, he confines himself in this work almost entirely to the description of specimens and does not venture into the speculations, so fascinating to the layman, as to looks, habits and genealogy. Professor Williston insists that the chief need is "more facts, *many more facts*," and he is not above going himself to Texas and digging up more facts. The volume is handsomely printed and illustrated, with thirty-eight plates of drawings and photographs of the fossil bones of the new species described.

Literary Notes

....A series of articles on *The Woman Movement in America* published in *The Chicago Sunday Tribune* has been collected by the author, Belle Squire, and published by McClurg (\$2). There are some very interesting facts about the colonial women, notably Anne Hutchinson and Margaret Brent, and it is fully illustrated with portraits of the ablest women of the nineteenth century, such as Frances Willard, Lucy Stone, Mary Livermore and Clara Barton. The chapters open with dramatic episodes in the lives of the Quaker, Abolitionist, Crusader, Reformer, or whatever character the spirit of progress assumed at the moment.

....The title of Dr. William H. Thomson's new volume is hardly descriptive of its contents. The essays which go to make it up refer occasionally to incidents connected with the *Life and Times of the Patriarchs, Abraham, Isaac and Jacob* (Funk; \$1.20), but they add little of value to our knowledge of the period even by way of illustration. The book is not worthy, in form or substance, to be styled "a supplement" to the author's father's work "The Land and the Book," which for more than half a century has been an invaluable aid to Bible students.

....With an unusual sense of all the values of rhythm and a striking power in the manipulation of words in picture-making, James Stephens in his *Hill of Vision* (Macmillan; \$1.25) hovers very near the gate so vividly described by Milton—the gate where various strange unshapely figures conversed with their master shortly before access was made easy between Pandemonium and the newly created Earth. Yet he has a power of beauty when he soars into a sweeter atmosphere, and few master his trade better than he does in the finer range of his "Prelude."

....The critical edition of the *Œuvres de François Rabelais*, published at Paris by Honoré and Edouard Champion, is, undoubtedly, the definitive one. Volume one, quarto, with a fine reproduction of a seventeenth century portrait, preserved at Montpellier, as frontispiece, has come to us; the subscription price is 15 francs. The general editor is Prof. Abel Lefranc, of the Collège de France. With him are associated MM. Boulenger, Clouzot, Dorveaux, Plattard and Sainéan. This first volume (pp. cliii, 214) contains the prologue and 32 chapters of *Gargantua*. The notes occupy more space than the text itself; but here is a case where that state of things is indeed proper.

....Biblical criticism may be seen from two quite different standpoints in Prof. Willis J. Beecher's *Reasonable Biblical Criticism* (S. S. Times; \$1.50) and the four addresses on *The Higher Criticism* (Doran; 50 cents), by Prof. S. R. Driver and Dr. A. F. Kirkpatrick. The latter volume presents clear and forceful arguments for the legitimacy, need and value of the critical work done by those scholars whose main conclusions are repudiated as unreasonable by Professor Beecher. One is inclined to think, however, that the real basis of their rejection is Professor Beecher's own theory of inspiration, and it is hardly to be expected that his book will accomplish its avowed purpose of making "orthodox ideas" of Biblical criticism "appeal to the thinking of the present generation."

....Is your vacation on its way, or are you on the way toward vacation? In either case *The Pipesmoke Carry* is a very little book, and it will fit snugly in your breast pocket. The author, Bert Leston Taylor (the Chicago Tribune's "B. L. T."), has smoked his woodland brand of pipe tobacco in his city apartment; in the rings of strong smoke he has found pictures of camp-fires and canoeing. His style is delightful, and the decorations by C. B. Falls are modestly, but more than moderately, effective. (Chicago: Reilly & Britton Co.; \$1.)

....Richard Davey tells "the true stories of the strange lives of Charles Brandon, Duke of Suffolk, and of the Ladies Katherine and Mary Grey, Sisters of Lady Jane Grey, the Nine-Days' Queen" in the volume which he entitles *The Sisters of Lady Jane Grey and Their Wicked Grandfather* (Dutton; \$3). The book is an excellent example of the type of historical love-story popular today, altho in justice to the author, who performs his task soberly and competently, it must be added that the adventures described are unknown to most readers of English history. The volume is generously illustrated.

....For school and home Bible reading one of the best helps that has been made by way of editing is *The Old Testament Narrative* (Houghton Mifflin; \$1.50), by Alfred Dwight Sheffield. Modern forms of printing are followed and divisions are made into paragraphs, sections and chapters. The classic English version is used, with here and there a well authenticated emendation in the interest of clearness and accuracy. Practically all of the narrative portion of the Old Testament is given, including several sections from the prophets and the Apocrypha. The notes, introduction and illustrations are founded on an up-to-date knowledge of Biblical criticism and archeology, and furnish real assistance to the intelligent reader.

....A *China Year Book* is a new thing, for a new nation, which is yet the oldest. It is edited by H. T. M. Bell and H. G. W. Woodhead, who gained their competency as editors of leading English papers in China. This is a very compact and complete duodecimo of nearly five hundred pages, and gives geographical, commercial, agricultural, sociological and religious conditions, with an abundance of statistical information, and the documents which bear on Chinese constitutional development, up to the time when the revolution acquired strength enough to shake the ancient empire. It is an indispensable volume for statesmen and students of current history. (Dutton; \$3.50.)

....A new series of *Letters to My Son*, by Winnifred James (Moffat, Yard & Co.; \$1), has the same charm as the preceding volume in the delineation of the loving care with which the writer makes preparation for wholesome surroundings for the unborn son. Yet we find a note of unreality in both books. We do not feel that a prospective mother ever could write them so; they are really addressed to the mature reader and try to tell a story. While a real mother who dreaded that she might not survive to know her child might leave a little note full of loving thought for him, these somewhat studied letters are unnatural.

....*Little Corky* (McClurg; \$1.35) is supposed to be a novel of American conditions, dealing, as it does, with a traction company in one of the large cities of the East. The heroine is a young woman of limitless wealth, who owns a bit of property much coveted by the company for a new power-house. Several fires occur, and the hero, who is none other than superintendent of the traction company, is regarded as an incendiary by his enemies. After many foolish situations which amount to nothing; after much foolish temper on the part of the heroine; after another big fire in which the hero nearly loses his life, this uncharacteristic novel draws to a close. Not, however, before the author, Edward Hungerford, drags in a railroad race, in order to exhibit an easy familiarity with one more subject.

....Nina H. Kennard's *Lafcadio Hearn* (Appleton; \$2.50) is in some ways the most comprehensive account of that remarkable man of letters. Doubtless the book would be a better one had it been better planned, and reasonably condensed; and there has been carelessness in the proofreading, resulting in numerous slips of minor importance. Moreover, Mrs. Kennard is no practised critic, such as we would choose to discuss so exquisite a stylist as Hearn came to be. She is at least a fair-minded and moderate chronicler, and her book supplements what Mrs. Wetmore has told us of Hearn's life—disposing for all time of some of the Hearn "legend," and discreetly hinting at something of the love of Hearn for Mrs. Wetmore (Miss Bisland) herself. Mrs. Kennard has the advantage of knowing Hearn's Irish kin, and of having read his letters to Mrs. Atkinson, his half-sister, some of which are published in her book.

....Few leaders in the Protestant Episcopal Church have shown more true heroism and devotion than the late Bishop William Hobart Hare, of South Dakota. He began his great work for the Indians as Missionary Bishop of Niobrara, and amid unusual difficulties and dis-

couraging experiences he laid firm foundations for the religious and educational development of his people. After years of hardship and struggle with ill health he saw the fruits of his labors and patience in the enlargement of his diocese and the expansion of his influence. Mr. M. A. De Wolfe Howe has published a good-sized volume in which *The Life and Labors of Bishop Hare, Apostle to the Sioux* (Sturgis; \$2.50), are pictured largely in language taken from the Bishop's addresses, letters and other writings. Altho the account is a little disjointed and too much like patchwork, it is well worth reading for the light it throws on a richly endowed, determined, high-souled servant of a needy and often helpless people.

Pebbles

"THE saddest hour," sings a poet, "is just after sunset." Evidently he doesn't have to get up at 6.00 a. m. in the winter time.—Logan (W. Va.) *Banner*.

MISS QUIZZ.—Have you ridden in Charlie's new auto?

Mrs. Malaprop.—Yes; it was lovely. There was some osculation, but it didn't bother me a bit.—*Brooklyn Life*.

"I FORGOT something," said the husband as he came back.

"Yes," pouted the wife; "you forgot to kiss me."

"That may be; but what I came back for was my overshoes."—*Louisville Courier-Journal*.

'Twas in the swampy afternoon,
When first the Noctab fritters forth,
I came upon a Kamaroon—
Believe me, by the harvest moon
I thought it was a Snorth!

Since morning in the net he lay,
Enveloped in a massive tome
(That well might flourish for a day);
But what amazed me was the way
It vitrified his dome.

"Can this be only as it should?"
I asked the man who held the score.
He peered across the pickle wood,
And answered, as he backward stood,
"He'll swallow many more!"

And now the Wood took up the grind
Of bookworms in the mango trees,
Nor any trace was left behind.
"Long might I search," I mused, "to find
Such pure events as these.

"Far better, if the tokens lie,
And all within my noodle's soup,
Or concentrated mustard pie,
To circulate my hat, and die
Of cerebrallic croup."

—*Life*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Party Treachery and Anarchy.

THE introduction of the direct primary system into nominations is creating a condition of anarchy in the Republican party and may at any time do the same in the Democratic party; and yet it has not been clearly recognized that this is the cause. Let us give the case needed consideration.

The delegates to the national Presidential convention for the Republican party have been hitherto elected by delegated conventions of the State or the Congressional districts. They were appointed to select not a candidate for the Presidency, but to select Electors, who shall later elect a President. Yet these Electors were themselves instructed for whom to vote, for the party Presidential convention has settled that matter for them, and never a case has been known where an Elector voted, as he might, for a candidate other than the man on whom the party as a whole had determined at its Presidential convention. He has not dared to vote otherwise. The Presidential convention was his authority. It alone had made the decision as to the candidate, and to vote

for some personal favorite instead of the one whom the people thru their delegated convention had chosen would be treachery openly flaunted, which no man could dare be guilty of.

But now the condition is changed. The Republicans of Pennsylvania have themselves voted individually, not by a convention, and by a handsome majority, that the man they wish for President is Theodore Roosevelt and not William H. Taft. They have also in their conventions selected their delegates to the national convention. Their leader, Mr. Flinn, one of the two rival Pennsylvania bosses, tries his best to get Mr. Roosevelt nominated, with what success we do not know as we write, but the bitterness between the two factions is extreme, and Mr. Flinn declares that as Elector he will not vote for Mr. Taft if he has the Republican nomination, but will vote—and the other Pennsylvania Electors will follow him, for Mr. Roosevelt. A similar threat is made from other States. That is, they say they will not obey the convention, but will obey the will of the people of their States.

It is a direct conflict of authority, the authority of the national convention or that of the people of the State as expressed in its primary. The case is not as clear as it might be and hitherto has been. We are not ready to say that to obey the will of the State is treachery. And yet a leading Republican paper of Pennsylvania thus characterizes the failure of an Elector who refuses to obey the decision of the party convention:

"To have done otherwise would have caused an Elector to be branded as a Benedict Arnold or an Iscariot as guilty of the foulest treachery. No one could have held up his head in this country after such a betrayal and apparently no one ever thought of doing so base an act. . . . Have we fallen on an evil day and generation when good faith shall no longer control in politics? We think not. Republican Electors will vote for the nominees of the Republican convention. To do otherwise after election without having giving notice of their intention before election would be the basest treason. If they make clear in advance that this is their intention Republicans will know how to treat them."

This year for the first time we have had in certain States nominations to the party conventions by popular direct primaries, in which every citizen was

allowed by a direct vote to declare whom he wished to be the party's candidate. These were positive directions to the delegates as to whom they should vote for at the Republican convention in Chicago or the Democratic convention in Baltimore. In this same way Electors are chosen: Are the Electors the servants of the nominating conventions, as they hitherto have been, or are they the servants of the people who have never before, but who do now, directly instruct them for whom they shall vote? We think that, as hitherto, the Electors are the servants of the convention, but it is not as clear as it was. When the delegates to the convention were not elected by the people, but by delegated local conventions, the will of the people was less defined. The local conventions might be under control of local bosses or of a State boss; but now the people themselves speak; and when factional feeling runs high, and each faction stoutly objects to the candidate of the other, it is not difficult to get up a fair argument that the will of the people should not be annulled. That is not our position, for we hold that in real fact Pennsylvania chose her delegates with implied instructions to submit, and pledging her voters to submit to the will of the majority in the convention. Yet, we say, this decision is not as incontrovertible as it was. We are brought into possible confusion and anarchy by the fact that in certain States the old delegated convention plan prevails, while in others we have the direct primary. Very likely, four years hence, all the States will have adopted the new direct primary, and in going into it they will pledge themselves to submit to the will of the majority as expressed by delegates to the Presidential conventions.

The threat from certain States of rebellion against the decision of the Republican convention may begin to give fresh vitality to the Electoral College. Hitherto it has been a farce. An Elector who has personal choice will be a new feature. We can imagine the case in which the party convention will cease to be worth while, when the people will have spoken their direct voice, and given the will of their several States to their Electors. Then the Electors will meet

and will have to harmonize the rival claims and select President and Vice-President. We do not see but that this may be the better way. It would be curious if the direct primary should galvanize into fresh vitality the almost defunct body of Presidential Electors created by our Constitution.

The present difficulty is not one that concerns the Republican party only; it may at any time confront the Democratic party as well. The difference between the Democratic factions even now is hardly less radical than is the case with the Republicans. One would say, to hear Mr. Bryan condemn Governor Harmon or Congressman Underwood, that the radical Democrats could not vote for a conservative of their party. Conditions may become such that a Democratic Elector may hold his fealty to the voters of his State superior to that due his Presidential convention. It depends in either party on the depth of the cleavage between the radical and conservative factions.

It is not at all unlikely that the direct primary will be tried in many other States. If so, it should have a fair chance not to break down. It should be guarded against excessive expenditure for corruption, and there is a needed guard to protect each party against the intrusion of the opposing party's votes. The new system has not wholly worked well; let it be given a square deal.

The Democratic Convention

AFTER the November elections in 1910 it was seen that the Democrats, if they should use wisely their newly gained power in the House and at State capitals, could approach this year's Presidential election with much confidence. Their advantage was due to popular disapproval of the Payne-Aldrich revision of the tariff. It has been retained. Their action in the House with respect to the tariff has been approved, we think, by a majority of the people, and their record there in legislation concerning other subjects has been, on the whole, a good one. To the political advantage gained by reason of the Republican tariff blunder has now been added the effect of a great quarrel in the Republican party, and

prominent Democrats are saying that any one who may be nominated at Baltimore for the Presidency will be elected.

The Democratic convention will follow the convention of the Republicans, and its action may be determined in some measure by what the Republicans do this week at Chicago. At the time when these words are written we cannot foresee what the Chicago convention will do, altho it seems probable that Mr. Taft will have a majority on the first ballot. If he is nominated, and if there is no organized bolt, many followers of Mr. Roosevelt will be ready to vote for a progressive Democrat. If Mr. Roosevelt is nominated, many supporters of Mr. Taft will refrain from voting or will vote for the Democratic nominee. An organized bolt, with a Roosevelt third ticket, would, of course, split the party. Under certain conditions, due to the action at Chicago, the Democratic leaders may be inclined to nominate a conservative; under other conditions they may prefer a progressive or radical. Men of each type are in the group of Democratic candidates for the nomination.

Writing for *THE INDEPENDENT* in January last, Speaker Champ Clark, one of these candidates, said:

"One thing is clear as crystal—in order to win we must hold all the voters we had in 1908 and draw to us about 800,000 who were against us then."

He was arguing that progressive or insurgent Republicans could get the legislation they desired only by supporting Democratic nominees. But he referred to the election of 1908, and did not take into account the more recent election of 1910, which exhibited a political revolution and may have foreshadowed a continuing alliance of the needed 800,000 voters with the Democratic party on the tariff issue. Still, if the Democratic party desires to retain the support of those who came over to it in 1910, it must insist upon its tariff revision plan. This it has been doing. And if it would attract independent voters in the so-called doubtful States—three of which are New York, New Jersey and Connecticut—voters who have been classed as independents in recent national elections, as well as those Republicans who may be

driven to independent action this year by the nominations at Chicago, it must show wisdom in making its nominations at Baltimore. Extraordinary conditions in the opposing party, offering an unusual advantage, will not warrant unwise and careless action in the Democratic convention.

Speaker Clark and Governor Wilson are at the head of the list. There is a conflict of testimony as to the number of delegates which each of these candidates has, but Mr. Clark is leading. Still, the claims of his friends give him less than half the convention, and about 240 less than the required two-thirds. Following Governor Wilson in the list are Representative Underwood and Governor Harmon. In addition there are States' "favorite sons," who will have complimentary votes at the beginning. Some time ago we spoke of the qualifications and records of all these gentlemen, and we recently directed attention to certain public utterances of Mr. Clark which are cited to his disadvantage. It is expected by some that several successive ballots will fail to give two-thirds to Mr. Clark or Governor Wilson, and that the convention will then turn to Mr. Bryan.

The delegates, and especially those whose advice will have much weight, should carefully consider the qualifications of each aspirant and be just to all. In the remarks we have quoted, Mr. Clark holds that success will require much more than the party's vote. Mr. Clark, in our judgment, is not stronger than his party, and is weaker than his party in certain parts of the country. His nomination would probably hold for the ticket those voters who have come to the party on account of the tariff, but we cannot see that it would attract those who ordinarily ignore party lines for other reasons. We shall not attempt to say how it would be regarded by Republicans made independent by party division at Chicago. Governor Wilson, altho he has no legislative record and experience, would be more acceptable to the average independent voter of the ordinary type. Mr. Bryan has not been directly identified with the party's recent tariff projects, but his nomination would not, we presume, repel the tariff con-

verts, altho we cannot see that, with this exception, he would command a larger vote than has been given to him in the past. If he should be nominated, however, the quarrel in the Republican party might increase his vote. We have heard Republicans who opposed him for years say they would gladly vote for him now if Mr. Roosevelt should be the Republican nominee. The convention should not permit Mr. Bryan's bitter opposition to Governor Harmon and Mr. Underwood prevent a just consideration of their qualifications. Because Mr. Underwood is a Southern man he may not be "available," as the politicians say, but he has done good work in the House. The record of Governor Harmon's administration in Ohio, and of his service as Attorney-General, proves that he is not a reactionary.

The Delegate Contests at Chicago

WHEN the Republican National Committee finished its work last Saturday night, contests affecting 254 seats had been considered. Decisions in favor of 235 Taft delegates had been made, and 19 of the 254 Roosevelt contestants had been accepted. The proceedings had been carefully reported by the press associations, and many of the prominent newspapers of the country had published from 8,000 to 10,000 words of the report every day. Nothing had been concealed. In a very large majority of the cases the decisions had been made by unanimous vote. Altho nearly twenty members of the committee are supporters of Mr. Roosevelt, there were but few contests in which they could vote for the men who desired to be delegates in his interest. As a rule, the contests in the South had been manufactured, and had no basis in law or morals. One of the few newspapers that are recognized as Roosevelt organs—it is owned by Mr. Frank A. Munsey—has published the following explanation:

"For psychological effect, as a move in practical politics, it was necessary for the Roosevelt people to start contests on these early Taft selections in order that a tabulation of delegate strength could be put out that would show Roosevelt holding a good hand in the game. That is the whole story of the larger number of Southern contests that were started early. It was never expected that they would

be taken very seriously; they served a useful purpose, and now the national committee is deciding them in favor of Taft, in most cases without real division."

But when the committee unanimously rejected these contestants, who had been brought forward "for psychological effect," Mr. Roosevelt cried loudly and repeatedly that he and the American people had been robbed or shamefully defrauded. He overlooked the fact that his own friends in the committee had not been able to vote for these men.

He had spoken with much indignation about the Taft delegates in Indiana, who were opposed before the committee by Roosevelt contestants. In March last he denounced the primary election in Indiana as "a criminal farce." The State's delegation, he said, did not represent the people, whose will had been "reversed by fraud," and the delegation's action was "not binding on the rank and file of the party in Indiana." Mr. Taft well knew, he added, that "the delegates elected for him in Indiana" represented "bare-faced fraud," and Mr. Taft "stood guilty of approving and encouraging the fraud."

But when the Indiana contests were taken up by the committee, last week, the Taft delegates at large and all the Taft district delegates except two were seated by unanimous vote, and upon the motion of prominent friends of Mr. Roosevelt, one of these being Senator Borah. The evidence in favor of these Taft delegates was conclusive. Mr. Borah said that even if Mr. Roosevelt's nomination had depended upon the acceptance of the Roosevelt contestants, he could not have voted for them. On the same day, however, Mr. Roosevelt published an article in which he repeated his charge of cheating and fraud, saying that in many cases in Indiana—

"—the Taft delegates represent absolutely nothing but fraud as vulgar, as brazen and as cynically open as any ever committed by the Tweed régime in New York forty-odd years ago."

And yet Senator Borah, Frank B. Kellogg, Cecil Lyon, William A. Ward and all the other Roosevelt members of the committee were voting for these delegates, and against the men set up against them. Two or three days later, Mr. Roosevelt said the action of the committee against his contestants was that of

thieves. This must have been relished by his friends who had helped to make the decisions unanimous.

At the end of the hearings, five Governors, with William Flinn and half a dozen other supporters of Mr. Roosevelt, address to the committee a letter from which we take the following:

"We advise you, in order that hereafter the matter may be one of record, that you are prostituting your positions, violating every tenet of fair dealing and decency, and assassinating the Republican party. You are perpetrating gross frauds. . . . We and the Republicans we represent will not tolerate or submit to your illegal, outrageous and larcenous acts. . . . Unless you rescind your fraudulent decisions, upon you shall rest the responsibility for the attempts to assassinate the party, and for all time to come you will have the contempt and execration of all liberty loving, square thinking and reputable citizens."

The record shows that this attack was unwarranted, and that, as we have said, in a large majority of the cases the Roosevelt members voted against the Roosevelt contestants. "On the highest possible authority," said, last week, the convention correspondent of the paper whose explanation of the Southern contests we have quoted, "it can be said that Colonel Roosevelt is going to be a candidate for President, no matter what burglary may be attempted by the Taft organization." This announcement may have been suggested by those who signed the letter address to the committee.

And now Mr. Roosevelt is in Chicago for the very purpose of encouraging and directing his supporters to claim everything, and to persuade Taft delegates to violate their promise and instructions. It is such a mad and boisterous demand for the highest office as the country has never seen before, and it is to be hoped will never see again. Mr. Roosevelt should be defeated at Chicago, and if not there, then at the polls in November.

Harvard as a "National" University

"It is an excellent thing for the University that the Associated Harvard Clubs are to meet in New York this year," writes the editor of the *Harvard Alumni Bulletin*, "for the meeting will expose Eastern Harvard men most thoroughly to the idea that Harvard is a national

university and has a mission to the nation at large."

The national character of Harvard University has been a favorite subject for emphasis at Cambridge in recent years. It is, moreover, acted upon as well as discussed. The exchange of professors with foreign universities became a practice in the consulship of Dr. Eliot. Under President Lowell, professors are exchanged with our own Western and Middle Western colleges as well. No longer is Harvard a Massachusetts institution. And in only one respect is the university parochial today. That is in the organization of its club life.

"The Problem of Democracy at Harvard," which is made the subject of an essay in a recent issue of the *Harvard Advocate*, would perhaps almost cease to be a problem but for the too centralized system of social organization. As the undergraduate author of the essay just cited shows, the sophomore club of 100 members, which is the nucleus of all "worth while" social clubs at Harvard, elects over 54 per cent. of all the "Gold Coast" sophomores and less than 1 per cent. of the rest of the class—that is, of those lodging in college dormitories and houses not in the Mount Auburn street quarter. Looking at the subject from a different angle, the graduates of high schools furnish less than 1 per cent. of the membership. Paternalism can scarcely hope to correct the puerilities of college clubs. The courageous attempt of Woodrow Wilson was what wrecked his Princeton administration. Yet the self-examination which Harvard is giving herself can scarcely fail to exert a wholesome effect upon her social system.

Meanwhile, the best news that can possibly come out of Cambridge in the near future is the fulfilment of President Lowell's plan for a great freshman dormitory, where the entering class may be thrown together, where its members can enjoy an equality of street address if not an equality of antecedent opportunity, and where the personal influence of resident instructors may be counted upon to exert itself as it has failed to do under the old system.

Harvard may then be as "national" in its social system as it is in educational equipment and membership.

The Need for Vacations

So much has been said and quite rightly in recent years about the great reductions in the death rate in our large cities and the consequent lengthening of the average of human life, that many people seem to think that fewer personal precautions are needed now to live long than were required a half century ago. It has been said that in proportion to the population, at the present time there are probably one-fifth more people alive above the age of fifty than even a generation ago. As a consequence many people seem to think that life now is a much easier matter than formerly; and that the necessity for vacations and periods of rest is not so great as it used to be. In New York City, for instance, the death rate in the course of a little more than a generation has been reduced from 30 to under 15 per thousand on the average. Surely this indicates, most people will argue, that there is much less reason for solicitude about health than in the past and much less need for sacrifices to preserve it.

Statistics are very curious things. Figures do not lie, but they can be made to lie, and often unconsciously and indeliberately those who quote them accomplish wonderful feats in this direction. The editors of medical journals have agreed to accept as a guiding maxim an expression which deserves apparently to be in a prominent place in the note book of every one who has much to do with the handling of statistics. The editorial expression is there are three kinds of lies: lies, — lies and statistics. The epithet for — lies may be supplied according to the temper and the religious character of the individual.

The statistics with regard to the death rate, while they are eminently encouraging and incontrovertibly true, and while they undoubtedly represent wonderful improvement in health, are not at all what they are thought to be by those who would argue that they signify a diminution of the need for personal precautions as to health if life is to be maintained and old age reached. For instance, not long since it was suggested that we should go slow in building hos-

pitals in our large cities, and especially the great, costly institutions that have now become the rule—and very properly, for the municipality owes it to itself to take care of its citizens, however poor they may be, in a manner befitting not them, but itself—for if the present reduction in the death rate continued there will soon not be nearly so much need for hospitals as is now the case. It is to be supposed that morbidity, sickness in general, will be reduced at least in proportion to the mortality. Therefore hospitals may become to some extent useless.

This argument represents a total misapprehension of the true significance of our mortality statistics. So far from reducing the necessity for hospitals, our lowered mortality rate really represents a factor that will call for ever-increasing hospital facilities. The reduction in the death rate has come mainly in the early years of life. Nature used to eliminate the weaklings in early childhood, but now we have modified that to a great extent, but death is still with us and is likely to continue to be, and his harvest has simply been increased in the years after middle life. The *Journal of the American Medical Association* not long since printed editorially the estimate that while deaths were fewer under thirty to a marked degree, between thirty and forty there had been only about 2 per cent. of reduction in the death rate, and in all subsequent decades there was an increase in the number of deaths. Between forty and fifty there were actually 17 per cent. more deaths than there had been a generation ago.

These are the deaths from degenerative disease. While our mortality rate from smallpox has become a vanishing quantity, and all the other infectious diseases have been taking fewer and fewer victims every year, deaths from heart disease, from kidney disease and from cancer have been on the increase. These are the diseases that require hospital treatment very often. When individuals die young they are usually treated at their homes, but in later years sufferers, especially from prolonged diseases such as occur in connection with degenerations of the kidneys, of the heart and

arteries, and of the cells in malignant disease, are likely to be for some considerable time in hospital care. In spite of our falling death rate we shall actually need more, not less hospital facilities in the future.

In the older time when infectious diseases were common, epidemics frequent, and sanitary regulations imperfect, children and youths died from them in their early years. They were the weaklings, without strong resistive vitality. When not subjected to the dangers of infectious disease they live longer, but do not accomplish the full span of life, and are likely to break down just about the time of their maturity, thirty-five to forty somewhere, and then the end is not far off. We have not changed human nature a single bit. We have only modified some of the conditions under which it is to live its life. The individual man, however, must still take care of himself, not abuse his vitality, maintain a proper order in life, and above all avoid such strains and strenuousness as will lead to degenerative processes. Unless he does this, life is likely to be shortened just at the time when it is most valuable, and the death process is likely to be prolonged and full of suffering.

Those who would argue that men may now with more impunity give themselves up to hard work, and that in the healthy living conditions of our large cities there is less need of vacations and of definite periods of rest every day, with complete diversion from thoughts of business, are making an egregious mistake. On the contrary, we need more care of health than ever, for the majority of those alive, and we need rest, and vacations, and the avoidance of that over-strenuousness supposed to accomplish so much, but that really only fusses and does not get anything genuinely worth while accomplished. A French visitor denominated this the land of the strenuous life, and probably in our large cities the expression is true. Probably also that is the reason why our death rate from heart disease, arterial disease of various kinds, and from Bright's disease has been going up. Undoubtedly that was the reason why something more than one-sixth more deaths occur in the decade from forty to fifty than used to

be the case, and a corresponding rise is noted in all the decades beyond that.

We have reached the time when men arrange their vacations. There must be no self-deception as regards the meaning of our much-advertised health reports. They represent real advances in hygiene and sanitation, but are not excuses in any sense of the word for any neglect of such personal care of health as has always constituted the only guarantee for continued life. Such care must not be over solicitous or it will defeat its own purpose, for constant, concentrated, strenuous worry about one's health makes the worst kind of strenuous life. Worry rather than work kills. A proper division of time in the day, however, the proper selection of periods of rest, a proper determination of vacation periods, all these represent the common sense of personal hygiene that no advances in public sanitation will ever make superfluous, much less render unnecessary.

We are familiar with **Medical Schools** so-called colleges and universities which have no real faculty, and give no oral teaching, but which exist solely for the fees received for brief instruction, by correspondence, and for the price of degrees conferred, and we smile; but it frightens us to be told that there are medical schools, so called, that are gotten up by physicians who enrich themselves by the fees received, which need no endowment, and which provide no adequate clinical experience. Yet such is the fact, as again reported by the Carnegie Foundation for the Advancement of Teaching. A class of independent medical schools exists in this country and in Canada the like of which are not to be found anywhere in Europe. In them the teaching is given from books, and not from experience in hospitals, and the study of anatomy is not taught by actual dissection, while the professors are any reputable local physicians who can find time to add teaching to their private practice. In Germany the medical school is a department of the university, under its control, and the professors are chosen for their known competency as adepts in their departments. They always have abundant advantage in hospitals in which

the students learn by actual observation the marks of disease and the proper treatment; and the Government examinations require actual dissection and diagnosis of actual patients with indication of the proper treatment. Three-fourths of our American medical schools have no such really necessary clinical facilities, but almost wholly book and lecture teaching, while the States allow written examinations. Under these circumstances the public cannot be assured of really competent medical service. All we know is that the practitioner has the legal right to put "M. D." after his name, altho he may have been graduated from one of the commercial medical schools in Boston, New York, Chicago, St. Louis or San Francisco, in which the teaching is of a low grade, and the opportunity for dissection or hospital experience at the sick bed has been quite inadequate. We are improving the grade in our best schools of medicine and law, but we need to do more suppression, as we need to extirpate the fake colleges and universities that sell the degree of Ph. D.

Danger to Civil Service We all hoped that the permanence of tenure of office in the civil service had been secured for all time by the passage of laws and by the successive acts of Presidents who had put various classes under the law by competitive examinations. We had imagined that, while the greedy class of politicians did not like it they had been silenced, for we were sure the people approved the better method, which took the civil, like the military service of the country, out of politics. But it must have been by some oversight that the legislative, executive and judicial appropriation bill has past the House with a "rider" which provides that the terms of the 28,000 employees of the executive departments at Washington shall terminate after five years' service "unless reappointed." This means the spoils system restored at one fell swoop. There must have been a purpose in this, and the friends of the civil service were caught napping. There is no time to be lost, and the country should make protest to the Senate to remove this provision from the bill.

Congress will adjourn very soon, and what is done should be done quickly and energetically. We cannot believe that the Republican Senate, which has stood for a permanent civil service, will consent to this action, which is the expression of as bad an error in tactics and in government as the Democratic party in the House could well be guilty of. We trust that when the matter comes to a conference between the two houses the Senate conferees will hold firm; and they will have the country with them.

Plural Voting Would plural voting be a good thing in this country? We presume there are many people who think so. In Belgium, which we are told is one of the happiest and most prosperous countries in the world, they have plural voting. They have universal suffrage there, which may be a dangerous thing, for the same persons who so warmly praise Belgian social conditions tell us that to universal suffrage "a very valuable corrective is added." Every man who has reached the age of twenty-five has one vote; at the age of thirty-five, if he has children and pays a house tax, he has two votes; or if he is a bachelor and has property valued at \$400, and has \$20 income a year from national bonds, he has two votes. If he has an academic or professional degree he is allowed three votes. Thus 1,000,000 men have one vote each, 400,000 have two votes each, and 300,000 have three each. Thus the two preferred classes have 1,700,000 votes with which to "nullify," we are told, the votes of the "worthless or incompetent." We trust the people better here, with "one man, one vote."

Electrical Power Thru the United States Senate we are in receipt of documents describing the enormous developments of the water powers of the world as generators of electricity. This evolution covers the small streams of our farms as well as the larger streams and waterfalls, like Niagara. We are concerned to note that in the United States, however, the generation of electricity by private concerns costs 50 per cent. more than it does in

Europe. This is not because our electricians are not up to date, but because in the United States we are hampered in the development of water power by the fact that land speculators have gobbled up power sites and are holding these in waiting for advance in prices before the power will be utilized, or are themselves holding the power at higher prices than it would command in foreign countries. This has retarded the natural development of the West, making irrigation more costly, and electricity for farm use restricted. The Senate committee promises a thoro study of the condition of affairs, with the proposition that the United States shall not much longer remain in the rear, not only in the power generated, but in the number of individual plants put into operation. It is believed that agriculture depends more upon the introduction of electric power than upon any other present evolution. Every farm home should have its own irrigation system and its own protection against fire, but more particularly it should have electricity so in hand as to reduce farm labor nine-tenths, and keep well in hand the problem of labor. In France and Austria private concerns are given grants of franchises to produce electricity at minimum cost. Sweden, however, is leading the world in the development of its electrical force, altho its water power is mainly in the far North and its application must be made largely in the southern end of the state. Other topics may attract more attention, owing to their immediate application to social or political affairs, but nothing more vitally touches American life than the development of power that shall be in the hands of the people and all of the people.

A lively letter on the marriage question has appeared in more than one of the Catholic journals, with comments that throw no light on the perplexing question. The writer is one of a club of fourteen girls ranging in age from seventeen to twenty-eight, of Irish and German descent, all supporting themselves, "not from choice but from sheer necessity." They are teach-

ers, nurses, stenographers, bookkeepers, milliners and dressmakers, and all Catholics. She tells why they do not get married:

"We are all willing, nay, anxious to be married, and all we want is a good moral fellow with a fair education and salary. We all agree that the Catholic Church harbors more old maids than any other organization we know of. Why? Because it separates its boys and girls and keeps them separated from the kindergarten grade up. One of a congregation of a thousand souls I am personally acquainted with three boys—the other girls [together] know almost a dozen, and this is a small town. We build magnificent churches, hospitals, convents and schools. We enter our churches as strangers, and as such we leave. Our convents furnish recreation rooms for girls, but you couldn't get a man there with a shotgun. Our schools are closed and locked after business hours. Our boys never extend us invitations; they do not know us. We cannot invite them to our houses; we never meet them."

It is plain why those fourteen young women do not get married. They look over the Protestant fence and things seem better to them there:

"Social life is the religion of the Protestant Church. It is there the girls meet their boy friends. It is there they arrange their social functions; and from my observations it is there they all marry. My own friend I met at a Protestant church, where the club sent me to investigate the social question. . . . Their Sunday school is their club room, and it is there the girls meet boys who are really worth while. Eight of our club girls have beaux, all Protestants, and, unfortunately, all staunch ones. We have all been pulling strings, but I know in my heart it is a case of lose my religion or my friend, and two of our girls have held this agonizing position for five years."

She wants to marry, likes her friend, but her religion, and his, stand in the way. Thus she concludes:

"I am a commercial success, but from trying to keep from falling in love with the wrong man and feeling that I may never meet one of my own faith, future life at twenty-four seems a dull gray. What we need in our Church to promote matrimony is a live wire, one who will take a lesson from the other Church and get busy."

What relief do the editors offer? Only this, that mixt marriages are dangerous, and that "girls seem unwilling to marry a man they consider their intellectual and social inferior," however excellent his moral character. Why should they? It is a hard case.

The rector of a New York church allowed Abdul Baha, teacher of a reformed sect of Mohammedanism, to speak in his church, whereupon *The Churchman* rebuked him. Then the Rev. John H. Melish, another local rector, defended his neighbor, on the ground that the teachings of Abdul Baha are essentially Christian, and that he is "by nature Christian," as his whole doctrine is that of love. *The Churchman* prints Dr. Melish's letter and makes this reply:

"The question is, What is the law of the Church, not, What is the character of Abdul Beha or the nature of his teaching."

The reply is correct, shockingly correct and conclusive; for there is a law of the Church which excludes one not episcopally ordained. Dr. Melish cannot defend himself except by the bold reply of Peter to the Sanhedrim which forbade him to teach in the temple.

The announcement by Justice Hughes that he will not allow his name to be presented as a compromise candidate for the Presidency really muddles the situation. The sharp division in the Republican party, not easy to be healed, seemed to make it unlikely that either Taft or Roosevelt could be elected if nominated, and to suggest the recourse to a candidate acceptable to both factions, and no other was so prominent as Justice Hughes. He refuses, and the convention is left in doubt, for La Follette and Cummins have hardly been considered available. The Democrats have in Governor Wilson a professional historian and scholar new to politics, but no such name appears on the Republican side.

There are 6,000 kosher butcher shops in Greater New York which supply beef and chickens to Jews; and they have shut up shop as a protest against the high prices for meat demanded by the wholesale dealers. That will send their patrons to buy vegetables and fish. But first the Jewish women had attacked the shops and poured kerosene over the meat, so that the shutout followed the strike. Prices seem abnormal, but we are reaching a condition in which there is a real scarcity of supply as compared with the days when farmers had oxen, and the local butcher easily found a cheap local

supply. If we eat less meat it will be none the worse for us.

The number of illiterates in the United States decreased during the decade from 1900 to 1910 from 10.7 per cent. to 7.7 per cent. But that is a monstrous proportion compared with Germany, where there are only three illiterates to 10,000 inhabitants. Of course Southern negroes still bring up our bad eminence, altho the percentage of negro illiterates has fallen from 44.5 to 30.5, while the illiterates of foreign birth remain at 128. There is yet much room for the public school before we can reach the standard of Norway, Sweden, Denmark, Holland and Germany where there are practically no illiterates. The first demand is for better negro schools in the Gulf States.

It has been sometimes claimed that as Columbus represents the whole continent which he discovered, so the Knights of Columbus are a national and not a religious society. We have evidence on that point in *The Pilot*, owned by Cardinal O'Connell, which, under the heading "Catholic Societies," gives a column each to the Catholic Order of Foresters, the Knights of Columbus and the Ancient Order of Hibernians. The fact that the Knights of Columbus represents a special form of religion is a reason for hesitation about a special holiday in honor of Columbus, as has been asked by that society.

Cable despatches announce that Cardinal Martinelli has been named Cardinal-protector of the Dominican Nuns of Sinsinwawa, Wisconsin, a very large sisterhood, engaged in teaching all over the Middle West. Martinelli is an Augustinian, that is, a friar of Martin Luther's order. There is now no Dominican Cardinal, and the new appointment calls attention to that fact.

We wish to give our hearty endorsement to the pleas in behalf of aid for the sufferers by the Mississippi floods. Thousands of acres of sugar cane have been destroyed, and that industry cannot recover for many years, and when the floods subside it will be too late to plant any crop that will give employment to laborers.

INSURANCE

An Illuminating Decision

UPON a petition from the Citizens' Fire Insurance Company of St. Louis, asking that the State Insurance Board, recently created by an act of the Kentucky Legislature, be enjoined from exercising the authority granted it by the law, three Federal judges—Dennison, Cochran and Hollister, composing a majority of the court—have handed down an opinion dismissing the petition. All the judges of the court concur in the opinion that the motion for an injunction should be denied.

After citing the rule that a Federal court of first instance should not declare as unconstitutional a State law where the question at issue is one of law and not of fact, the majority of the court set forth their reasons for declining to approve the issuance of a preliminary injunction. They state that fire insurance is a commercial necessity and that its character tends to monopoly; that it is practically in the hands of a comparatively small number of insurers who, in many things act together and are so situated as to make the control of rates an easy matter. They also hold that while the business of fire insurance is not impressed with a public use in the sense that the public can demand service, it has at least a quasi-public character as distinguished from a business purely private in its nature. The court then proceeds to say that because of this partial public character the business of fire insurance has been subjected to a system of regulation by the States which would be impossible of application to a private business. The regulations respecting solvency; those limiting the amount of business a company may transact in a year; the amount of commissions it may pay its agents, etc., are mentioned as among those which are unchallenged by the subjects of the regulation yet clearly in violation of an unrestricted right of contract.

The court points out that the commission created by the new law has fixed no rules. It is but an assumption to conclude that it will reduce existing rates and there is no knowledge as yet that its regulation would result in pecuniary in-

jury to the fire insurance companies. Altho the complainant in this case denies the power of the State Board to make any regulation whatever and claims that by reason of such lack of power the whole law is invalid, and although both parties to this suit unite in requesting the court to overlook this consideration and to pass upon the merits of the ultimate question, the court replies that it does not feel compelled to pass upon the request, as it does not rest its decision on the possibly premature character of the act.

The court then observes:

"We do not interpret the act as requiring insurance companies to furnish any information except that which they already have. With this view there is no serious burden in complying with the act up to the time when the commission may make an order claimed to be an invasion of complainant's vested rights. When that time comes, if it involves an imminent danger of losing its license for refusing to comply with such an order, it might present a different situation."

From the opinion thus rendered we gather the following conclusions: Fire insurance is judicially determined to be of a character which tends to monopoly and, that as at present constituted, it does actually make competition in premium rates easy of control; that the business is quasi-public in nature, and, therefore, not entitled to the exemption from State regulation enjoyed by purely private enterprises; and that the main question at issue has been left undetermined by the court because, as the commission has not as yet taken any action at all, the companies' interests are not only not yet affected injuriously, and that until the commission does act it is impossible to hold that they will be injured.

ACCORDING to a newspaper paragraph the first life insurance policy of which the details are on record resulted in a lawsuit. William Gybbons insured himself on June 15, 1583, for £383 against dying in twelve months. He did die on May 18 of the next year, and the disgusted underwriters (the company of those days) contested payment on the plea that he had lived twelve months of twenty-eight days each.

FINANCIAL

National City Bank One Hundred Years Old

THE National City Bank of New York, which received its charter on June 16, 1812, celebrates its one hundredth anniversary this week. The bank's authorized capital was \$2,000,000, but subscriptions were received for only \$800,000 when it opened for business. In 1900 its capital was increased to \$10,000,000, and in 1902 it was further increased to \$25,000,000. Early in its

house. The building was remodeled by McKim, Mead & White, who preserved the original Ionic colonnade on Wall street, but completely altered the interior.

Since the organization of the bank there have been eleven presidents, as follows: Samuel Osgood, 1812-13; William Few, 1813-17; Peter Stagg, 1817-25; Thomas L. Smith, 1825-27; Isaac Wright, 1827-32; Thomas Bloodgood, 1832-44; Gorham A. Worth, 1844-56; Moses Taylor, 1856-82; Percy R. Pyne, 1882-91; James Stillman, 1891-

THE NATIONAL CITY BANK OF NEW YORK.

career the bank subscribed for \$500,000 of the United States loan of 1813, issued to provide means for carrying on the war with Great Britain, and it has participated in every important Government loan since that time. The surplus of the bank was \$2,000,000 in 1886, \$24,000,000 in 1907, and \$34,000,000 in 1911. The National City Bank was for many years located at 52 Wall street, but in 1908 it moved into its present home, formerly used by the United States as a custom

house, and Frank A. Vanderlip, since 1909. According to the last statement, the National City Bank had total resources of \$290,165,606. The capital stock was \$25,000,000, the net surplus \$28,390,534, and the individual deposits \$139,334,641. James Stillman is chairman of the board; Frank A. Vanderlip, president; W. A. Simonson, H. M. Kilborn, J. A. Stillman, J. E. Gardin, Samuel McRoberts and J. T. Talbert, vice-presidents, and A. Kavanagh is cashier.

Survey of the World

Taft and Sherman Renominated

The Republican National Convention, at Chicago, on Saturday last, renominated President Taft and Vice President Sherman. At the beginning of the day's session, Governor Johnson, of California, a delegate, left the hall, saying he declined to be present while a nomination was made or to be bound by the acts of a convention whose roll of delegates was fraudulent and which had nullified a law of his State. The other California delegates, he added, were in sympathy with him, but at his request they would remain and carry out the general plan of the Roosevelt delegates. His reference to the nullification of a law related to the admission of two Taft delegates from California. The convention then acted upon the Credential Committee's reports as to the remaining contests, the reports being approved. This done, Henry J. Allen, of Kansas, then made an address, saying the Roosevelt delegates could no longer share responsibility for the convention's acts. He attacked the National Committee. "We shall not help you finish scuttling the ship," said he, "but we do not bolt. We sit in silent protest." He read a message from Mr. Roosevelt, who said that the committee, under the direction of Mr. Taft, had stolen eighty or ninety delegates and defeated the will of the people; that the convention, having refused to purge the roll, no longer represented the party; and that he hoped the Roosevelt delegates would decline to vote. He would not release a delegate from an honorable obligation to vote for him, but the convention represented nothing but successful fraud, its nominee would be the beneficiary of fraud, and any one accepting the convention's nomination

would forfeit the right to ask the support of honest men. Mr. Fairbanks, of Indiana, then read the new platform. Wisconsin offered a La Follette platform as a substitute, but it was tabled after argument had been made. The platform was adopted. For it 666 voted; 53 opposed it and 343 remained silent. Notice had been given that Mr. La Follette would not support any platform that did not contain the main provisions of his own. W. G. Harding of Ohio then nominated Mr. Taft in a long address, reviewing his record and saying he was the greatest Progressive of the age. The nomination was seconded by John Wanamaker and Nicholas Murray Butler, president of Columbia University. Michael B. Olbrich, of Wisconsin, then nominated Senator La Follette in a long speech, and this nomination was seconded by R. M. Pollock, of North Dakota. The name of no other candidate was presented. The roll was called. For Mr. Taft 561 voted, for Mr. Roosevelt 107, and 344 were silent. For Senator La Follette 41 votes were cast, for Senator Cummins 17, and for Justice Hughes 2. A movement to give second place on the ticket to Governor Hadley, Senator Cummins or Senator Borah had been unsuccessful, owing, it is said, to Mr. Roosevelt's disapproval. A New York delegate nominated Vice-President Sherman, and Ohio seconded the motion. A roll call showed 597 for Sherman, 21 for Borah, 14 for Hadley, 20 for Charles E. Merriam, of Chicago, 1 for Howard Gillette, of Chicago, 352 silent, and 71 absent. The Roosevelt delegates had begun to seek Orchestra Hall, where a meeting was to be held. This meeting was called to order, after the convention adjourned, by Governor Johnson, and Senator Clapp

took the chair. Roosevelt delegates, alternates and contestants were present. They adopted resolutions declaring that the will of the people had been defeated by fraud, that justice had been denied to them for five days, and that they "hereby" nominated Mr. Roosevelt as the candidate of "our party." Mr. Roosevelt then came in, went to the platform, thanked them for their action and said he would accept the nomination, subject to one condition. The contest was one

bosses, the roll had been fraudulent, he had been cheated out of the nomination, and the permanent success of such practices would mean the downfall of the Republic.—Mr. Taft said that patriotic people were breathing more freely because a serious menace to our Republican institutions had been averted:

"The question at stake was whether the Republican party was to change its attitude as the chief conservator in the nation of constitutional representative government, and was to weaken the constitutional guarantees of life,

THE COLISEUM AT CHICAGO: WHERE THE CONVENTION MET

that could not be settled along old party lines. The principles at stake should appeal to all honest citizens, whether Republicans or Democrats. Therefore he asked those before him to go to their homes and ascertain the sentiment of the people, and then to assemble in mass convention and nominate a progressive candidate on a progressive platform, naming a candidate and making a platform that would appeal to people of all parts of the country, "Republican and Democrat alike." Mr. Roosevelt said: "If you wish me to make the fight I will make it, even if only one State should support me." The convention, he said, had been controlled by sinister political

liberty and property and all other rights declared sacred in the Bill of Rights, by abandoning the principles of the absolute independence of the judiciary, essential to the maintenance of those rights. The campaign carried on to seize the Republican party and make it the instrument of reckless ambition and the unsettling of the fundamental principles of our Government was so sudden and unexpected that time was not given clearly to show to the people and the party the dangers which confronted them. It was sought to break the wise and valuable tradition against giving more than two terms to any man in the Presidency, and the danger from its breach could not be measured. The importance of the great victory which has been achieved cannot be overestimated."

A committee of seven, led by Governor Johnson, has been appointed to confer

Copyright, Underwood & Underwood, N. Y.

THE REPUBLICAN CONVENTION AT WORK IN CHICAGO

with Mr. Roosevelt and to prepare a plan and platform for the coming convention.—At the beginning of the week, Mr. Roosevelt said the talk about a bolt was “all nonsense.” On the night

of the 17th he made a long address in the Auditorium, attacking the National Committee. At the first session of the convention, Governor Hadley’s motion to put Roosevelt contestants on the tem-

porary roll was ruled out of order, after brief debate. Having Wisconsin's votes in mind, the Roosevelt forces made Governor McGovern, of that State, their candidate for temporary chairman. Senator Root was elected by a vote of 558 to 502. There was more talk of a bolt, but Governor Hadley, Governor Deneen and others opposed it. Governor Hadley made a good impression as Roosevelt leader in the debate on a motion to put 92 Roosevelt contestants on the roll. This motion was tabled, 564 to 510, but the proposition was referred to the Credentials Committee. At the first meeting of that committee the Roosevelt men, or nearly all of them, bolted, by Mr. Roosevelt's order, but they returned, only to bolt again. Early on Thursday morning Mr. Roosevelt said, "I am thru." He had fairly won, he added, and the controlling forces in the convention had set out to cheat him. He advised his delegates not to commit themselves by further association with a fraudulent majority. "We are prepared," said Governor Johnson, "for the birth of a new party." But others opposed bolting. The Roosevelt claim before the Credentials Committee was reduced to 48, but the committee, by large majorities, approved the decisions of the National Committee. Mr. Roosevelt published a long statement saying he had been robbed and would accept a Progressive nomination. On Friday night it was decided that he should not be nominated in the convention, and plans were made for a silent protest by the majority of the Roosevelt delegates.

Republican Platform The new Republican platform, a very long one, says the party has always been one of progress. It believes in "our self-controlled representative democracy, which is a government of laws, not of men"; supports the principles of constitutional government, which make provision for orderly and effective expression of the popular will, and for the interpretation of the law by an untrammelled and independent judiciary; is prepared to go forward with the solution of new social, economic and political problems, to limit the labor of women and children, and to en-

act generous compensation laws for workmen; will enforce the limitations imposed upon themselves by the people for the protection of civil liberty; will uphold the authority of the courts, which must enforce constitutional requirements until they are altered by the orderly method provided; favors legislation to prevent delays in legal procedure; regards the recall of judges as unnecessary and unwise; would simplify the process of removing unworthy judges; stands for the peaceful settlement of international disputes by an international court; opposes special privilege and monopoly; would supplement the anti-Trust law by a definition of criminal offenses; would create a Federal trade commission; believes in a protective tariff; would reduce some of the duties, which are too high; would have duties readjusted by means of correct information, which can best be obtained by an expert commission, like the Tariff Board; holds that the Democratic tariff bills are sectional and destructive of business enterprise; would support a scientific inquiry as to the cost of living; favors revision of the banking and currency system; for the benefit of farmers would make an investigation as to agricultural credit societies abroad; would extend the competitive civil service "as far as possible"; favors legislation more effectually to prohibit corporation contributions to campaign funds; would require the fullest publicity for all campaign contributions, even those made in connection with primaries; would establish a parcels post; condemns the Democrats for refusing to provide for new battleships; believes the Federal Government should assist in controlling Mississippi floods; would open Alaska coal lands by leases; would legislate to give relief from the growing evil of induced or undesirable immigration; and would enact laws to protect life and property at sea. It commends the Administration's effort to secure greater economy and efficiency in the business of the Government, urges the people to condemn and punish lynchings, challenges successful criticism of the administrations of Presidents McKinley, Roosevelt and Taft, and invites the intelligent judgment of the people upon Mr. Taft's record.

The Democrats at Baltimore

A subcommittee of the Democratic National Committee chose Alton B. Parker, Democratic nominee for the Presidency in 1904, to be temporary chairman of the convention at Baltimore. When Mr. Bryan, then in Chicago, heard of this, he sent a protest by telegraph and at the same time asked the leading candidates to oppose the selection. The most definite response came from Governor Wilson, who said "You are quite right," adding that the convention was to be a progressive one and should express its character by its organization. At the beginning of the present week there were signs of a sharp controversy over Judge Parker.

Congress The President has vetoed the Army Appropriation bill, one provision of which would have legislated out of office in March next General Wood, chief of staff, and made certain other officers ineligible for the place. In his message he said:

"The army of the United States is far too vital an institution to the people of the country to be made the victim of hasty or imperfect theories of legislation. As was pointed out by the chairman of the Senate Military Committee, it is well known that the war college and the general staff have been for many months engaged upon a comprehensive plan of army reorganization. At the present time, therefore, it is especially inappropriate, in my opinion, to force upon the statute books legislation enacted without the usual deliberation and care. I cannot conscientiously surrender the responsibility in shaping such laws with which I am vested under the Constitution. It would be hard to conceive of a clearer instance of forcing upon the Executive legislation well known to be disapproved by him, and, by attaching such legislation to one of the great supply bills, to deprive him of his constitutional power."

It is reported that Secretary Stimson would have resigned if the bill had not been vetoed.—Attorney-General Wickersham sent to Mr. Mann, the Republican leader in the House, a sharp protest against a paragraph of the Sundry Civil bill, forbidding the payment of money appropriated for Trust prosecutions to any attorney who has held any other office under the Government within two years. This, Mr. Wickersham said, might be called an act to destroy the efficiency of the Department of Justice, as

it would compel the dismissal on July 1 of ex-Secretary Dickinson and all the other counsel for the Government in the prosecution of the Steel Trust, with other counsel engaged in almost every important case pending. The defendants' interests would thus be promoted. The bill has been amended so that it will not affect counsel now in service.—The House Committee on the Judiciary has reported by unanimous vote in favor of articles of impeachment against Robert W. Archbald, Judge of the Commerce Court. There are twelve charges, the majority of them relating to transactions with railroad companies or persons directly interested in cases before him. In the case of the Marion Coal Company against the Lackawanna Railroad Company, the Interstate Commerce Commission has decided in favor of the coal company, whose president, W. P. Boland, is the complainant against Judge Archbald.—In Tacoma, Judge Hanford, against whom charges are pending, has declined to reopen the case of Leonard Oleson, or to give him a new trial. He canceled Oleson's certificate of naturalization because Oleson, a Socialist, had attacked the Constitution in public speeches.—The President has pardoned Franklin P. Mays, convicted of land frauds in the Mitchell-Hermann cases in Oregon, on the ground that improper methods were used by the Government in the selection of jurymen.

The Revolt in Cuba

It was reported in Santiago at the end of last week that the rebel leaders had been bought off by the Cuban Government. During the week there was scarcely any fighting. Estenoz burned the town of Tiguabo, north of Guantanamo, and the buildings of the Ponupo Manganese Company, near La Maya. Rebels menaced the mining plant at El Cuero, which was protected by American marines, and they burned two or three buildings of the Guantanamo Sugar Company, near Soleidad. There were 1,200 American marines on Cuban soil. Our Government's estimate of the number of rebels in the field was from 2,800 to 4,100. General Monteagudo's offer of amnesty expired on the 22d, and only about 300 rebels had taken advantage of it. These,

however, brought with them no arms. Estenoz sent to our consul at Santiago a long protest against the alleged inhumanity of the Government's troops. They had, he said, burned 120 houses, the homes of peaceful negroes, and had even killed young negro children. He was ready to prove this to the satisfaction of any representative of the United States, and he promised to "start a real race war" if there should be more atrocities of the same kind. In Havana, *El Dia*, a newspaper owned and edited by Congressman Andre, published a sharp attack upon President Gomez, alleging that the rebellion had been instigated and planned by him, in order that he might gain credit and a re-election by suppressing it. Many incidents were cited which, it was alleged, supported this charge. Gomez, the paper said, had had many interviews with Estenoz and had given him reports of the action of the authorities in Oriente at the beginning of the revolt. Andre is the Conservative candidate for Governor of Havana. As a Congressman he is immune, but Gomez ordered that the paper be prosecuted. Orders were also given for the prosecution of *La Prensa*, whose editor, in an interview published in New York, had accused Gomez of fomenting the rebellion, and of *La Lucha*, which had reprinted the interview. The editor of *La Lucha* is Congressman San Miguel. General Collazo and other Cubans express the opinion that the Cuban people would oppose intervention by war.

Mexico's Revolutionists

The expected decisive battle between Huerta's army and Orozco's rebels was not fought last week, altho there were outpost skirmishes in which several soldiers were killed. Huerta appeared to be awaiting the approaching attack of two Federal forces, one from the east and the other from the west, upon Juarez, where there is a garrison of 1,000, commanded by General Orozco's father. It was thought that Orozco, if defeated near Chihuahua city, would retreat to Juarez, having practically abandoned the western part of the province. Huerta captured Batopilas, known in connection with the Shepherd silver mines, seeking to pre-

vent Orozco's escape into Sonora thru passes in that vicinity. It was said that Orozco's arrest of General Campa, a popular officer, had almost caused mutiny in the rebel ranks, and that Orozco had sent to Juarez for sixty trustworthy men to serve as a bodyguard. Campa, after going to the front, had returned to protest against Orozco's forced loans in Chihuahua, the looting of shops and the oppression of merchants there. Rebel officers in civilian clothes were crossing the river at Juarez, it was said, apparently giving up the fight. Orozco's wife crossed there and went to Los Angeles, having with her, it was alleged, \$200,000 in gold. In Sinaloa, the revolution was dead. Near Tepic, 400 rebels were whipped by Federals, and thirty-two rebels were killed. All rebel prisoners were executed on the field. Zapata lost a battle in Morelos, but continued to send threats to the capital. Madero, he said in one message, must resign before September; in another he assured the foreign ambassadors that his Government would not recognize any foreign loan negotiated by Madero. Colonel Steever, the American commander at El Paso, again warned the elder Orozco against shooting across the boundary.

A. C. Edwards, examining surveyor of the Maritime Affairs Board of Trade, testified on June 17 that the "Titanic" had not been constructed according to official rules. Either the builders had transgressed Board of Trade regulations or the Board's officials had been lax. According to Sir Walter A. Howell, chief of the maritime division of the board, the number of lifeboats to be carried by liners has been based upon tonnage, not upon the number of persons aboard. Lord Mersey, interrupting the witness, stated it as his opinion that every ship could carry boats enough to save every one on board. Sir Alfred Chalmers, professional adviser to the Board, explained that the lifeboat scale had not been altered for eighteen years, because "traveling across the Atlantic was the safest traveling in the world." The "Titanic" disaster had not led him to think that a change in the regulations was necessary. Lord Mersey said

that "the 'Californian' ought to have made efforts to get to the 'Titanic.'" —At the hearing of June 18 Mr. Marconi told the British Attorney-General, Sir Rufus Isaacs, that he was considering a device causing the wireless apparatus to ring a bell—thereby giving warning that a ship was in distress. This would summon the operator aboard the ship with which communication was sought, and a message could thus always be delivered, whether or not the operator was on regular duty.—The strike of English seamen and dockers has collapsed. For more than a week it crippled the traffic of Southampton. The strike of French seamen spread to Marseilles last week.

Electoral Reform in France

The French ministry has drafted proposals for electoral reform—the knotty problem which the Premier has held to be the greatest internal issue confronting him. M. Poincaré will stand or fall according as the Chamber accepts or rejects his proposals, and he will not tolerate obstructionist tactics. It was rumored last week that M. Léon Bourgeois (Minister of Labor) would resign from the all-star ministry owing to disagreement with his chief on the subject of electoral reform; and tho this was denied, the Paris press professed to see the signs which precede the disintegration of a government. All this is to be questioned, however. The Poincaré ministry, which is uncommonly strong in its personnel, dates from January of this year. The Prime Minister himself is an advocate of truly proportional representation. He will offer a compromise, however, for the Radical-Socialists, upon whose votes his ministry must depend, do not sympathize with him here. The principal reform aimed at will, then, be the substitution of the *scrutin de liste* (with representation of minorities) for the *scrutin d'arrondissement*. Under the *scrutin de liste* every elector would vote for the total number of deputies sent to the Chamber of Deputies by his department—and the number of departments qualified to form separate electoral areas is, by the government proposals, to be only sixteen or seventeen. The Department of the Seine, including Paris, is to

be split up. Each constituency is to elect one deputy for every 70,000 inhabitants, and for any remaining fraction of that number, if said fraction exceeds 20,000 voters. Under the existing system of the *scrutin d'arrondissement* the elector votes only for the deputy of his *arrondissement*; a much smaller area than the department. The *scrutin de liste* prevailed from 1871 to 1876 and from 1885 to 1889. The system replacing it, now deservedly unpopular among discriminating electors, lends itself to "church-tower politics," or what we should call the local-interests and log-rolling system of statesmanship. The Poincaré ministry's proposals for the reapportionment of seats in the Chamber of Deputies will, it is said, tend to strengthen the majority; not only the actual majority, but the dominant parties or groups of the future. If it does so, its consummation is desirable, for the instability of ministries under the Third Republic has been almost a scandal.

The French and Morocco

Before Mulai Hafid, the Sultan, left Morocco, he presented to Colonel Gouraud a jeweled sword and congratulated him upon his effectual dispersal of the rebels who had invested Fez. This achievement won for the French officer promotion to be general of brigade.—It is with relief that the Sultan of Morocco has left his northern capital, where his three years' residence has been full of responsibilities and disorders. He who was hailed as the savior of his country when he usurped the throne of his brother departed loathed by his subjects, with a loathing based on his extortions, intrigues and barbarities. Latterly he has been a mere puppet of the French, whose military authorities have not even consulted him.—Newspapers have tried to represent the late disorders in Morocco as a national and religious revolt against the aggression of a Christian invader; but it must be remembered that Morocco as a nation is the creation of European diplomatists. The new French protectorate is a land of small tribes, inhabiting almost inaccessible mountain slopes, and valleys. The inhabitants of the lowlands have been kept in subjection by their sultans, who have

derived their revenue from them; the hillsmen were natural marauders.— Now that the French are the masters, the transfer of the Residency from Fez to the old imperial town of Rabat is under discussion. In the discussions of the report on the Foreign Office budget for 1913, drawn up by M. Paul Deschanel, president of the Foreign Affairs Committee prior to his election to the presidency of the Chamber of Deputies, it is noted that certain expenditures will be transferred to the new Moroccan budget. The Moroccan grants borne on the Foreign Office account are reduced from about \$218,000 to \$60,000. The development of French influence at Tangier and the building of a school there account for the fact that the reduction made is no greater than it is.

At secret conferences
The Chinese Loan in Paris on June 18 was discussed the granting of the \$300,000,000 loan to China. The delegates of the Powers concerned in the negotiations were reported to have been confronted with a move on the part of Russia designed to make that country dominant in the new republic. It was charged that Russian agents and the Chinese Premier, Tang Shao-yi, had been in secret negotiation, and that the reported illness of the Prime Minister was used as a blind. Russia was said to have offered an immediate advance of \$50,000,000, and the balance of \$250,000,000 from time to time as needed. On June 18 the other Powers hastily loaned China \$2,000,000 for immediate expenses, hoping to prevail upon China to refuse the alleged Russian advances. Two days later, the whole tale of Russian intrigue was branded as false. If it had any basis, Russia must have weakened, for the "six power group" came to an agreement on that date, Mr. H. P. Davison, of J. P. Morgan & Co., who has presided over these Paris conferences, issuing an announcement to that effect. The bankers' proposition will now be submitted to China. Mr. Davison says that the banks concerned are as follows:

The Hongkong and Shanghai Banking Corporation of London, the Deutsche Asiatische Bank of Berlin, the Banque Indo-Chine of Paris, J. P. Morgan & Co., Kuhn, Loeb & Co.,

the First National Bank and the National City Bank of New York, the Russo-Asiatic Bank of St. Petersburg, the Yokohama Specie Bank and various firms and institutions affiliated with certain of these groups.

The statement issued is in part as follows:

"In February last certain groups were approached by the Chinese Government with a request for financial assistance. This, it was suggested, should be given by advances against Treasury bills to be redeemed from the first proceeds of the reorganization loan. The Chinese Government itself requested a total amount of \$300,000,000, for which adequate security would be provided and it was contemplated that a part of the loan should be issued at the first instance.

"Considerable delay was occasioned by the negotiations with the Chinese Government in reference to guarantees for the due expenditure of the advances. Satisfactory guarantees had been obtained when further delay was caused by negotiations among the group themselves which were entered into at the instance of the six Governments concerned and with the full approval of the Chinese Government.

"Altho difficult and protracted, these negotiations were conducted thruout in a friendly spirit and the general satisfaction was evident at the attainment of a complete understanding to meet the urgent needs of China, that is, the disbanding of troops, the discharge of current obligations and the setting up of a new administration.

"The groups have from time to time made such advances as the circumstances necessitated."

The new republic is in urgent need of money and has considered the raising of an internal national loan. Premier Tang has from the start objected to the terms of the six Powers (the United States, Great Britain, France, Germany, Japan and Russia), providing that there should be a financial adviser to the Chinese Government. The Chinese have taken full advantage of the want of team-work among the six Powers. Reports have been current that Tang Shao-yi was to resign his office, but these are denied. Apparently he is now in Hong Kong. A certain faction favors the elevation of Dr. Wu Ting-fang, former Minister at Washington, to the premiership, and Chang Chien is also named, altho the National Assembly is said to favor the abolition of this office.—The Chinese troops stationed in Mukden mutinied on June 19 and many natives were the victims of their ferocity and looting. Foreigners and their property were respected.

Rarotonga

BY EDWIN E. SLOSSON, Ph.D.

[Dr. Slosson, of our editorial staff, sends us this article from the Island of Rarotonga in the Southern Pacific. He is now on a scientific trip to Australia at the invitation of the Victorian Government and we shall publish other articles from him based on his observations.—EDITOR.]

THE first indication of approach to a South Sea island is not drifting seaweed or spicy breezes, but a sudden efflorescence of tourist literature upon the library table of the ship. It is written in the curious and characteristic style, common to nearly all writers between the Cancer and the Capricorn, and runs mostly like this (I copy a quotation from Clement Wragge's "The Romance of the South Seas"):

"What a panorama, what a tableau of tropic beauty, as one leisurely walks around Avarua! The picture is like some poet's dream. The cocoa palms, laden with nuts to breaking strain, are rustling in the Trade Wind in a continuous and surging cadence, and the frayed fronds of the giant banana quiver soft music in a minor key. What a lush of the tropics! Yonder are paw-paws and waving sugar cane. . . . There are the broad leaves of the taro and the spiny frondlets of the pineapple. . . . And all among this glorious tangle are the happy Natives, their faces beaming the essence of good will."

I would quote more of this Wragge-time description but for the fact that the anxious inquirer can get it for nothing by applying to the nearest office of the Union Steamship Company of New Zealand, Limited. I gathered up all of it I could find on the table and supplemented it by unlocking the bookcases with half a crown and by borrowing from my fellow passengers, for I had had no experience in tropical writing and realized that I must practise some before I could swing the style. After a few days spent in the perusal of Melville, Loti, Wyllarde and Stoddard I thought I had got the hang of it and decided that I would write up my observations and sensations beforehand, so as to be quite free to enjoy myself when I got to the island. This is a common practice among travelers and often ad-

vantageous, because reality is often disappointing and incapacitates one for writing with that enthusiasm which the reader who travels by proxy has come to expect. Accordingly I set to work and had turned out several pages of copy by the time land hove in sight, or we hove in sight of land, for I suppose in reality the ship did all the heaving. I give it below just as it was written, for if an etching is most valuable in its first state, as a proof before letters, why should not the same hold for literature?

And so we reached a land where it seemed always afternoon. How sweet it is to lie on the coral strand under the shade of a banded tree with fragrant perfume of the copra wafted to our nostrils on balmy zephyrs. With a languid eye we watch the scarlet hibiscus flitting about among the great green leaves and with a curious ear listen to the mournful song of the tui-tui. Sweet little mangoes dangle by their prehensile tails from the spreading limbs of the utu (*Barringtonia speciosa*) or chase one another thru the broad branches of maupei [Insert botanical name]. The delicate mimosa creeps along the ground, but shrinks from the touch as we attempt to pat it on the head. Graceful lianas climb up the trunk of the puka tree as tho trying to catch the yellow frangipani perched upon its topmost twig but the pretty creature escapes by taking wing to a neighboring tamanu (sacred mahogany) tree. Between the luxuriant foliage of the poinsettia and the straight brown trunk of a kanaka we can catch a glimpse of the foamy surf beating upon the encircling reef and the hula-hula bellying in the breeze. Ever and anon we reach up and pluck a cockatoo from the low laden branches overhead and squeezing its golden pulp into a cocoanut chalice imbibe the refreshing beverage. As the natives pass we greet them in their own language "Kia ora na!" whereat they smile upon us and respond according to their quaint island custom by sticking out the tongue. And we think how delightful it must have been to live with these gentle people in the days before the missionaries came and contaminated them; how charming it would have been to take part in their innocent revels when they danced in their birthday clothes under the shade of the [Hunt up name of another tree] or sat about the festal board heaped with native delicacies, such as the luscious breadfruit, the—granadilla, the ripe red fei, the—

THE TOWN OF AVARUA, CAPITAL OF RAROTONGA, FROM SHIPBOARD

taro and, as the *pièce de resistance*, the only mammal then living upon the islands (*Homo sapiens*.)

This, as I have said and as perhaps the reader has observed, is in an incomplete state. There were several reasons for this. One was that this lush style of composition uses up adjectives very fast, one or more to every noun, and there was no dictionary on board to replenish my vocabulary. Another reason was that I was so indiscreet as to read it to a man on board who had been to Rarotonga. Naturally I expected him to take the same opinion of my effort that I did, but his remarks were distinctly disappointing. He began to pick flaws in it with what seemed to me a very captious spirit. The alleged mistakes were all of a petty character, as, for example, that I had, in some instances, confused flora and fauna, tho I assured him that since it was not intended as a contribution to the Royal Society, strict accuracy was not required, would, in fact, seem pedantic. The important thing is to maintain the proper atmosphere, the proper degree of temperature and humidity. Still his criticisms, tho I paid as little attention to them as possible, had a certain influence upon me, and I decided to postpone the completion of the manuscript until I could get access

to the manual of flornithology prepared by Professor Woods of Johns Hopkins University, "How to Tell the Birds from the Flowers."

Besides we had got to Rarotonga by this time, so I shall have to put down what I saw there in an informal manner and add the artistic touches when I get back home. Or if this should get into print before my return it will not matter much, because the reader will have observed from the sample just given what I can do in the literary line when I lay myself out on it, and he will readily dispense with any more of it.

At Rarotonga the steamer does not pull up beside the dock, but keeps at a respectful distance from the land, for the harbor is merely a semicircular notch in the island, apparently made by the falling off into the deep sea of one side of the rim of the original crater. Our anchor rests in 30 fathoms of water, but when the ship swings shoreward her stern comes into 6 fathoms. We are, in fact, anchored near the top of a volcanic peak, most of which is under water, but which rises 2,300 feet above at its highest point, the mountains showing their youthfulness by their abrupt and uncompromising demeanor. They seem quite too big for the island; they fill it

up, leaving a strip of level land only a mile or two wide around the island, and the coral reef has to hug the shore instead of extending out far enough to form a lagoon which could serve as a harbor as in Tahiti. The mountain peaks are almost as steep as in Tahiti; they could not be any steeper without leaning over forward, but they are not so high, for the Tahitian peaks rise over 7,000 feet from the sea.

Another difference we notice as we view our new island from the deck of the steamer, that is, that Rarotonga is more densely wooded than Tahiti. We necessarily use Tahiti for comparison, because that is the only tropical island most of us have seen, and we only saw that the day before yesterday. At Tahiti many of the hills are denuded on top not only of trees but also of vegetation, leaving the reddish soil exposed, looking like a bronze monument that had been carelessly scoured, rubbing off the bright green patina from the high places. But Rarotonga is robed in for-

ests from top to toe, and tall touzle-headed cocoanut palms can be discerned on the ridges between the dark green gulches that radiate outward from the central mountain mass.

As soon as the barge comes alongside the ship we all tumble into it, in order to make the most of our time, and when it reaches shore we make a run on the post office across the road, not to get mail, but to send it, for there are few places nowadays left on earth where one can gain so much gratitude from his friends by a penny postcard as at Rarotonga. The inhabitants are not numerous nor much given to correspondence. Then, too, the Cook Island stamps still bear the image of Queen Makea, so there is a chance for speculation in philatelic futures, since the old queen died last year.

Near to the post office and other administration buildings is a hotel, bearing the Maori name of Whare Manuhiri, "Resting Place for Birds of Passage." This was built by the New

MAORI BOYS PLAYING CRICKET

Zealand Government in 1905, just after that dominion took over the administration of the Cook Island group. It is a cool and comfortable building of ferro-concrete, and pretty nearly empty most of the time, for tourists have not yet discovered this resort. The lessee of the hotel told me that he ran an advertisement in the New Zealand papers at an expense of \$500 and only got two letters in reply, both of them asking for Rarotonga postage stamps. American sightseers generally stop off at Tahiti, the first island reached after leaving San Francisco, but they would do better to go on to Rarotonga, for in this and the neighboring islands of the Cook group they would find much more primitive conditions and also a better administration. Tahiti, under French rule, is a wide-open island, but Rarotonga has the lid on. In fact it maintains a sort of perpetual quarantine. Natives returning from Tahiti are subjected to a rigid medical inspection, and it is proposed to extend the regulation to white men as well. Consequently Rarotonga

is exceptionally free from diseases prevalent almost everywhere else in the world. The water is pure, since it is supplied to the whole island from springs in the mountains. Altho the island is between the equator and the tropic of Capricorn, the climate is not uncomfortable, at least during the dry season, from April to November.

Rarotonga can boast of other advantages in the way of immunity. It is free from both liquor and snakes. This is perhaps a unique distinction. Ireland, for example, tho freed by St. Patrick from snakes, still has its whisky. Kansas, for another example, has banished whisky by its prohibitory law, but has not succeeded in eliminating the rattlesnake. But in Rarotonga both the snakebite and its antidote, both alcohol and the reptilian visions it engenders, are unknown. White residents are, it is true, permitted to import their own private supply of liquors, but it is kept under bond in the custom house and doled out to them in what seems to the commissioner proper allowances.

DIVING FOR PENNIES—RAROTONGA

THE KING'S PALACE, RAROTONGA, AND TOMBS OF THE ROYAL FAMILY

There are about 150 white persons on Rarotonga and some 2,400 natives, and the political power is practically in the hands of the latter. The ruling body is council of six, all natives, but the Resident Commissioner, as presiding officer, has the veto power, and all laws are subject to the approval of the New Zealand Government. The three arikis, or tribal chiefs, are members of the Council, but the rest are elected by native adult suffrage, so we have here a remarkable political situation in that colored women can vote and white men cannot.

The whites are excluded from land-owning as well as the franchise. They are allowed to lease it, but even this is difficult, for the natives are not anxious to have their island exploited for the benefit of others, being quite independent because they are contented. They have no rent or taxes to pay. Fuel is plentiful and unnecessary. Full dress is not in vogue among the natives, except on steamer day. Food is cheap

and poverty unknown. The natives are in fact making money faster than they know what to do with it, for since Rarotonga has been made a way station on a steamship line between San Francisco and Wellington a double market has been opened for its products. The dried meat of the cocoanut, known to commerce as copra, has risen in price from \$35 a ton to \$140 now that German chemists have discovered how to transmute the evil-smelling stuff into fragrant foods and soaps. Bananas and oranges rank next in value, and these three products make up 95 per cent. of the exports of the islands, now amounting to \$300,000 a year. The bananas are not shipt in bunches, as in the Atlantic trade, but are picked off and packed in boxes like the oranges. This economizes space in the hold, but the bananas do not keep and ripen so well as when left on the parent stem. All night long the lighters plied between shore and ship until 850 tons of fruit were taken on board to be deliv-

ered at New Zealand, and the passengers had time not only to drive around the island, a circuit of twenty miles, but also to see the Maori dances in the evening.

Many of us wished we could stay longer, say stop over between steamers, a fortnight or so, and the busier the person the more he wanted to stop, for it would be hard to find a place where more complete rest and change could be obtained. No cable connects the island with the outside world and no Marconi apparatus disturbs the ether. The only newspaper is the *Te Karere* (The Messenger), which is published whenever the boys in the mission school get the type set up, and being printed in Maori and devoted to church news and scriptural instruction does not agitate the mind as do our American yellow journals. Social duties are not pressing, and the only theatrical entertainments are the two motion picture shows. The 4,400 mile voyage from San Francisco, with daily diminishing wireless news, gives one time to cure oneself of the habit of taking too much interest in

what is none of his business, and by the time he reaches Rarotonga he is content to confine himself to such simple pleasures as sampling strange fruits and weaving garlands out of unknown flowers. As a diversion he may wade about the shallow lagoon when the tide is out prospecting for coral and pearls, or, if more energetic, spear fish from the bow of a catamaran. And if one should get tired of Rarotonga—which seems impossible to the visitor of a day—he may take a tour of the eight or ten other islands of the Cook archipelago, which are still more primitive and therefore still more enjoyable to the tourist seeking to escape his kind. It is in fact about the only place easily accessible where one may realize his dream of a tropical island and without danger or inconvenience come into contact with savagery, savagery with the teeth drawn, for this is a Christianized people under a good government, but otherwise little changed in character and mode of life.

My First Year Out of the Pastorate

BY A METHODIST PREACHER

[Twice before has this Methodist minister contributed to our columns. "The Story of a Handicapped Life" was printed in THE INDEPENDENT of November 9, 1905, and "My Superannuation" in THE INDEPENDENT of March 23, 1911. We comment on this article in our editorial pages as we did in the case of the two previous articles.—EDITOR.]

WHEN, a little more than a year ago, my wife and I found ourselves settled in the little town of G—, in the home built for superannuated Methodist preachers, a new experience entered our lives. For thirty-three years I had been an active Methodist preacher. I had served churches in twenty-six different counties of my native State and had lived in twenty different counties. For all these years I had not known what it was to have a settled home. It mattered not how pleasantly situated I might be, we knew that at the end of four years at farthest we must move. The habit of changing from place to place was a life habit and was a matter of ever present

consciousness, to be taken account of in all our plans and arrangements. Along with this certainty of a change in our charge at the end of four years at most was the constant uncertainty as to whether we should tarry in any circuit we were serving longer than the current year. One of the cherished customs and traditions of Methodism is the keeping of a preacher's appointment a secret and a mystery until the bishop makes his announcements at the close of a conference session. This is supposed to be best, as it leaves the bishop unhampered and prevents other complications. In all my years in the active work I recall only three or four times when I had any intimation as to where I was to be sent

before the appointments were read out, and in only two of these cases did the information come from any one authorized to speak.

But now all this was changed. We were settled and permanently settled in a home that was ideal in its arrangement and furnishings. There would be no more moving at the behest of a bishop, often at the captious demand of an official board or some man of influence, whose money gave him audience with the appointing power, nor under the requirement of a law that has been more faithfully kept in Southern Methodism than the Ten Commandments. I could but know, however unwelcome the knowledge might be, that my pastoral work was at an end. Superannuation in the case of a man past sixty usually means permanent retirement from active work. I could but be glad for my wife that our going to and fro was at an end. The itinerant system is full of hardship for the wives of preachers. The burdens of the home, always heavy, are all the heavier when the home is transient. My good wife, like many another preacher's wife, had given up a good home to become an itinerant's wife. She had borne all the privations of the itinerancy bravely and uncomplainingly, and now that these were past I could but rejoice for her sake that she could surround herself with those things a woman and a wife loves. She could have a garden. She could have flowers. She could have a poultry yard. She could make a home for herself and those she loved.

But the unselfish pleasure I felt in view of what my superannuation meant for my wife did not save me from the bitterest trial of my whole life. My retirement had come so suddenly, so unexpectedly. It had come without warning. I had been assured by my presiding elder that he could take care of me, and I had faith in his assurance. I knew that the end would come in the course of a few years, and I had already begun to cast about for a home for our old age. With our children self-sustaining I believed that we could save enough in the course of a few years to buy a little home somewhere, possibly in my home village, and go to it to spend our last years in quietude and final preparation

for the termination of our life journey. I was aware of no abatement in my mental and physical powers. I knew that my sight was no more defective than it had been since I was thirteen years old. I believed that I was doing as good work as I had ever done. I felt that I had been forced into a false position by my superannuation. I could but regard the action as a piece of grave injustice, not to myself alone, but to the men that were really worn out in the pastoral work, and to the Church itself, since my retirement meant that I must depend on the fund for superannuates for at least a part of my support, when I was fully able and altogether willing to work for the Church as I had done for a third of a century. I felt this conviction so keenly that I censured myself for not having faith sufficient to ask for location, when I should have had to depend entirely on my efforts for a support. And I may say that this question of conscience still remains unsettled. The seeming dishonesty of my relation to the Church humiliated me. And it still mortifies me. No honest man likes to eat bread that comes to him as a gift when he might earn it. But this was not all. The sudden arrest of my work was like the stopping of the currents of life. Mind and heart, thought and faith stood still under the shock. I was bewildered, sorrow smitten, almost broken-hearted. Nothing afforded me unmingled pleasure. The abounding kindness of our newly found friends made me think of the times in the past when I could show my appreciation of such beneficence by heartier diligence in the pulpit and in my pastoral work among them. The sphinx-like silence of some and the matter-of-course attitude of others at whose instance I had gone into retirement, and the sympathies of some who were powerless to help me, all added to my grief. My well-worn Bible seemed to mock me with its many marked passages. And when, now and then, I had an opportunity the very freedom that I had in declaring the truth that had been the theme and joy of my life was followed by hours of bitter sorrow that I could minister these truths to others no more, except on rare occasions, such as might be accorded me by the pastors. The

Sabbath became the saddest day of the week. And the wound to my spirit did not heal by first intention. Every effort that I made in Sabbath school and prayer-meeting work and in the homes of the people made it bleed afresh.

It was fortunate for me that I had little time to nurse my grief. I must needs meet some very practical questions that would not wait on sentiment. I had thought much in the past about how to live and how to help others to think about that question; I must think now about how to make a living. To a laboring man of any age this is a serious question; to a Methodist preacher sixty years old, whose life work is suddenly taken from him, and, as in my case, whose sight is so defective that he is presumably unable to do the work of the pastorate, the question is doubly serious. For be it understood that the allowance doled out to superannuated Methodist preachers is totally inadequate to meet their needs. I am as yet unable to settle the question as to whether the Church considers this allowance in the light of a debt or a donation. If it is a debt, one is disposed to think that the sense of obligation in the matter sits very lightly upon the conscience of the Church. If it is a donation, one is tempted to think that it is dispensed, purposely or otherwise, in such ways as to make the claimant feel all the humiliation of an unwelcome pensioner upon the Church's bounty. The very basis of the distribution of this fund makes it inevitably inequitable. It is divided among the claimants according to their several and comparative necessities. This, on the surface, seems altogether just, but its operation brings hardship and mortification to many a sensitive old preacher. Bishops are paid liberal salaries without any inquiry as to what their personal means may be. Editors and connectional officers are amply compensated without resort to the tax books to see what real and personal property they own. Boards of stewards make their assessments for pastors without taking into account the individual resources of the preacher in charge. But when the board of finance of an annual conference comes to the distribution of the funds in its hands, it must,

under a specific law of the Church, take into account the several necessities of the different claimants. In order to reach the necessary basis for this sort of disbursement diligent inquiry is made as to the private means of the superannuated preachers and the widows and orphans of preachers. And a statement from the individual claimant is not considered sufficient. A circular is sent to pastors within whose charges claimants live, making minute inquiry into their private affairs. The result of all this is that no superannuate feels quite sure what he will receive from year to year, nor quite certain that he will be taken care of fairly, unless he has his case in the hands of some member of the board or some preacher who has influence with the board. When the additional statement is made that the largest allowance paid to any superannuate in the conference to which I belong—one of the largest and wealthiest in the Methodist Episcopal Church, South—was only \$400, and that amount to only a few of the preachers, it will be understood why preachers in the active work consider it such a hardship to be retired to the superannuate relation. My allowance at the close of my first year as a superannuate was only \$300, and I am not at all sure that it will be that much this year. To the facts that have been given one is apt to receive the complacent answer that no other Protestant Church makes such liberal provision for its worn-out preachers as does the Methodist Church; but the whole truth is no other Protestant Church expects, exacts and receives as much from its preachers as does the Methodist Church. We have been told with much eloquence that the missionary sentiment would prove to be a tide that would lift and carry to unwonted largeness all the other contributions of the Church, notably that for the superannuated preachers. I have never been disposed to call this statement in question. And yet, while the collection for missions in the conference to which I belong showed last year an increase over the amount raised the year before, the collection for superannuated preachers was \$500 less than it was the year before. The explanation of this is that we have been more eager to get money for

missions than we have been to create a missionary conscience and a missionary faith. And this eagerness has not always proceeded from a missionary conscience on the part of the pastors. Said a layman to me last year, in speaking of a preacher who had been in our conference only a few years: "Brother L. is the most anxious man we ever had on our circuit about his collections. He said that if the people didn't pay them he would; that a preacher's standing in the conference depended on his getting up his collections." And the layman added significantly: "You see where Brother L. is this year. He'll go to the top, mind you if he don't." I could but wish that I was in possession of facts which would contradict the impression of this young preacher and the inference which my friend, the layman, had drawn from his statement. I believe most sincerely that there is no class of men in all the world truer to the light and more faithful to duty than Methodist preachers, and I do not wonder that many of them are growing restless under the constant and increasing pressure that is brought to bear upon them in the matter of raising the collections ordered by the General Conference, augmented by the several connectional and conference boards and unceasingly urged upon the pastors by the appointing power. Earnest men among them feel that the test of efficiency is no longer spiritual, but material; not how many souls can be saved, but how many dollars can be raised. With this impression largely prevalent among the preachers it is not to be wondered at that some have yielded to the temptation to exploit the secular and not the religious side of the work of the Church. And since the emphasis is placed upon missions and education and similar interests, it is also no wonder that the superannuated preachers are not sharing largely in the increased giving of the laity. Ten years ago a movement was started at the General Conference, which met at Fort Worth, Tex., to secure an endowment fund for retired preachers, and which it was hoped would reach \$5,000,000. After ten years' effort, with a special agent in the field and a canvass of all the annual conferences, the fund

still lingers below \$300,000. Over against this set the fact that in one of our Southern States efforts to endow three of the educational institutions of our Church have, in three years, resulted in the securing of pledges amounting to \$600,000. This neglect is not due to indifference on the part of the laity of the Church to the needs of the superannuates. On the contrary, the people respond to no appeal of the Church so readily as to this. The contributions to the superannuates' fund would be larger and the allowance given the retired preachers would be greater if the presiding elders would stop using the superannuate relation as a sort of dumping ground for men who are in no sense superannuated preachers.

My own superannuation was made as easy as that experience can be made, I think. And barring the longing for my old work, which I suppose will linger with me as long as I live, my first year out of the pastorate was, in many respects, unexpectedly pleasant. With a balance in bank that would not suffice for half the year, with a debt of \$200, which I had unfortunately brought over from my active years, and with uncertainty as to what I should receive from the conference board of finance at the end of the year, I betook myself to the matter of ways and means with an energy that was a good antidote to what was liable to degenerate into a morbid pitying of myself. While in the pastorate I had for a number of years been in the habit of delivering some lectures for the benefit of various church enterprises, especially for the improvement of parsonages, and more than one preacher's home had been bettered inside or outside by the proceeds of these lectures. Once I had received a proposition from one of the bureaus offering a salary that was three times what I was receiving, besides traveling expenses, if I would give my whole time to lecturing; but I was afraid to turn aside from the ministry, and did not accept the proposition. Now these lectures would stand me in good stead as a means of supplementing my allowance from the conference, and give me pleasant employment. In this my brethren of the conference were very kind to me, opening my way into

their churches, and I traveled nearly 3,000 miles on the railroad, visited more than a hundred families, preached sixty times, attended six district conferences, met many old friends and many new ones, sold nearly 300 copies of my book, which came from the press the 1st of June, and have hardly known a more active year in all my life. My wife's sister is still with us, and at the beginning of this year we opened a little book store, taking \$50 of my allowance as capital, and this gives her and myself employment. Of course our business is small

as yet, and will probably never be large, but with a temperament that is hopeful by nature as well as by grace, I look for better things by and by. Our health is good. Our children continue to do well. A sweet little grandbaby came last year to touch tender chords in our old hearts. Our friends here still love us. My charity for men and my faith in God and my life purpose do not waver. I would gladly go back to my old employ, but since that may not be, I shall guard my soul against the sin of bitter repining and wait for the perfect day.

The Homecoming

BY WILLIAM ROSE BENÉT

ARE the long rails ringing to the far, hill-hidden train?
Are the bright rails singing a soft, thin strain?
The rails are humming "She is coming—she is coming!"
The brightest and the loveliest is coming home again!"

Here the wayside station, with a flag out by the rails,—
The agent's deep damnation of all schedules, routes and mails,—
But a smoke-wisp's faint persistence on the blue of summer distance
Has winged my heart o'er mountain-tops and miles of meadow vales.

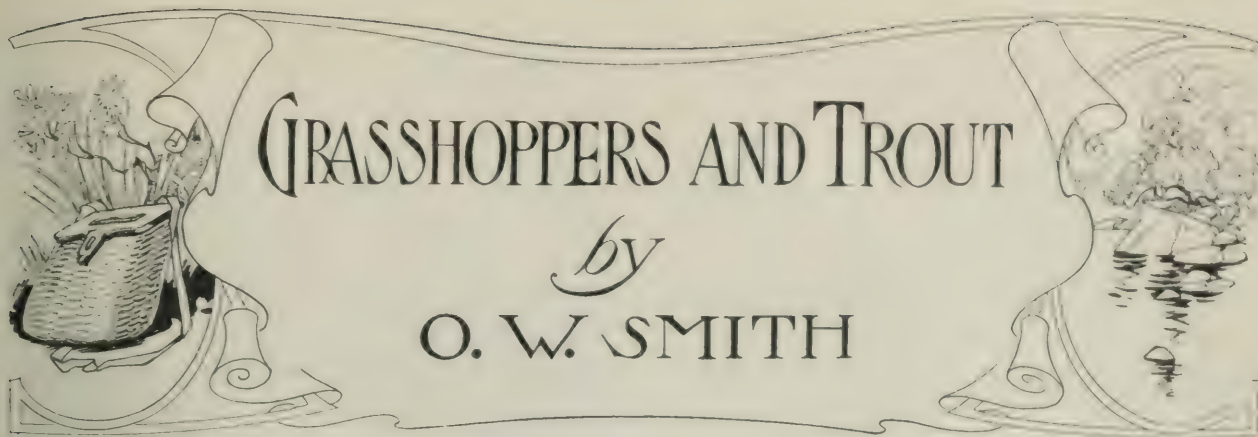

Bugles out of Faerie, oh the thrill ye never knew
Of this subtle sound and eerie that my heart beats to!
For the rails are strumming, "She is coming—she is coming!"
The gladdest heart save one we know is coming home to you!"

On thru summer meadows where gay children wave a cheer,—
Plunged in woodland shadows, whence the white farms peer,—
Roaring over bridges as full-tilt she takes the ridges
The train from far and far away is bringing home my dear.

Then, tuned to clearer message, the gleaming metals purr.
"At the cut-off!" flies my presage. "Now they're rocking round the spur!"
For the vibrant rails are strumming, and the great train's coming,
And all the wealth in all the world is coming home with her!

And now—the fields are glancing with a sudden Eden-light.
All the flowers of June are dancing in a world made bright
To a whistle wildly stilling every heart-beat with its shrilling
Till my heart leaps, thrilling, thrilling,—and the train's in sight!

NEW YORK CITY.

GRASSHOPPERS AND TROUT

by
O. W. SMITH

AFTER the Fourth of July, when the farmer oils up his mowing machine and casts a speculative eye in the direction of his whitening rye fields, I select my lightest fly rod and hie me in the direction of some favorite trout brook. July and new-mown hay fields mean grasshoppers; and grasshoppers, to the knowing, mean trout. Be it said, not every fisherman has discovered the possibilities of grasshoppers as trout bait. Now you laugh. Well, laugh!

Some summers ago I was spending a few days with a friendly farmer who was fortunate enough to be the owner of a pasture thru which a whimsical, laughing brooklet wandered. Parenthetically, that was the most companionable stream which it has ever been my good fortune to scrape an acquaintance with. It had broad, deep pools by which it was good silently to muse "O'er sin and saint-hood," long reaches where the water leaped and danced like children fresh from school, and one found himself thinking of gay days past and blithe days to come. That is the triumph of your true trout stream, it matches mood with mood. Silvery laughter for your happy hours, gentle sympathy for the days of care.

But to return to the trout and grasshoppers. On the day of which I started to tell you, I had followed Mr. X.'s stream (X. stands for the unknown personality), for three hours and not a fish had responded to my lures, tho I had run the gamut of my fly book thru and back without result, and had even resorted to the much maligned "garden hackle," which, being translated, means earth worms. So much a materialist

am I, that under those conditions the stream had no messages for me. The glassy pools mocked me with their unresponsiveness. The erstwhile silvery music had become ribald laughter. I wanted fish. Then, disgusted, I retired to the shade of an elm tree to think the matter out.

From the hill just beyond the little valley thru which the stream wandered* came the merry click-clack of the busy mowing machines, and, occasionally, the shouts of busy workmen. Close at hand the air throbbed with the hum of many insects. It was a morning for dozing and dreams, but there was no drowsiness in me. Now had my creel been full, or even half full of fish I could have surrendered to Morpheus with right good will, but yonder was the stream and here was I with empty creel. While I sat speculating and, it must be confessed, thinking things a fisherman has no business to think, a drove of cattle, anxious to quench their thirst and preceded by a cloud of flying, leaping grasshoppers, wended their way toward the creek. Of course some of the grasshoppers fell, or rather hopped into the water. Instantly the surface of the stream was all aboil with hungry, feeding fish. Before the foremost cow had wet her soft muzzle I was on my hands and knees seeking grasshoppers.

To the uninitiated catching grasshoppers is a simple matter. All you have to do is place your hand upon him and he is yours. Unfortunately, this, like a great many other theories, is not workable, for when you put your hand on a grasshopper he is not there. How long it took me to catch that first grasshopper I have no means of knowing. It seemed

an eternity, tho no doubt it was less than five minutes. At last I held one of those elusive 'hoppers in my hand. Paying no attention to the "'lasses" which he made, I empaled him on my hook and crept toward the stream. When yet ten feet from the water I sent the struggling grasshopper flying thru the air. The instant it struck the water there was a splash, a sharp tug, and my bait had disappeared. How a trout can steal a 'hopper from a sharp hook is more than I can understand, but do it they will. Again I hunted grasshoppers, and again a century died before success crowned my efforts. With great care I fastened

the second insect to my hook. Again I crawled within casting distance of the stream and hurtled the kicking 'hopper thru the air. Coincident with the splash of the insect came the splash of a trout. "Hooked!" I shouted, rising to my feet; but I was mistaken. Once more my bait had disappeared. That time Fate played into my hand, for a great, lusty, red-legged 'hopper lit by my side, and before he knew what had happened my hand was upon him and he upon the hook. For the third time I cast; the 'hopper floated upon the surface of the water, kicking. I waited. Potential moment. Then without any fuss or excitement a

"SILVERY LAUGHTER FOR YOUR HAPPY HOURS"

great fish calmly came to the surface, opened his mouth and swallowed my bait. The moment had arrived. I was fast to a large fish.

Now I hope the reader will forgive me if I do not describe the battle—how the fish dashed hither and yon, ripping the line thru the water until the surface of the miniature pool appeared as tho lashed by some tropic hurricane, and how, at last, exhausted, he came to the net and creel, a two-pound beauty. To add that for long moments I sat and gloated over his eighteen inches of sparkling loveliness would be to desecrate self-confessional, and that I will not do. At last I stored him away in my basket; corner wise was the only way I could get him in; and set about catching a supply of grasshoppers. One by one I gathered them in, pinching their heads, so that they would consent to

remain in my worm box. Then the trout. What a catch that was! Thirty-five as fine trout as was ever taken from any water. Not one less than ten inches, tho none were quite so large as that first fish. As I look back across the years that experience looms large—in fact, alone fills a niche in memory's hall. Anticipation, participation, retrospection—these three, but the greatest of these is retrospection.

As I have already intimated, all this occurred years ago, and since then I have learned much about grasshopper fishing for trout, and let us hope some

other things too. Concerning the catching of 'hoppers I have discovered that in the early morning, before the dew has disappeared, these gymnastic insects are not active and can easily be taken; furthermore, when the grass is dry and the

'hoppers active, if a man will follow a single insect he can capture it in short order, whereas if he slap at every passing 'hopper his bait will come slowly. Isn't that true of most things with which we have to do? Keep after one thing, no matter what, and it can't for long evade us. What is that old adage about "one thing at a time"?

Then, too, with the passing of the flying years I have learned something as to tackle and methods. The rod should be as light as your skill will warrant your using. The line of the enameled variety, and the hook small. The reel is not so important, so long as it is light and supplied with a good, strong

click. Regarding methods, handle your rod as tho you were using the fuzzy wuzzy lures, for grasshopper fishing differs little from fishing with the artificial fly. Keep back from the stream, for in 'hopper time the water is apt to be low and the fish easily frightened. Learn to cast thirty feet with accuracy, then add to it, as you must add to your faith, virtue. Ordinarily fish down stream, unless you are an up stream crank, then go to it your own way. Above all, keep back from the stream and tread cautiously. Learn to know your stream, its every pool and eddying current, then know

"HEROIC DEEDS"

trout. "Bait your hook with your heart," says Thoreau, and he was wise, whether speaking of fishing for fish or some other things.

Must I again apologize for my love of fish and fishing? Is it the fish I love? No, and I do not object to a toothsome brook trout either. It must be the fishing, the ministry of environment, the trees, the flowers and the birds, the breaking out of the old rut for a few

hours or a day, the getting in touch with old mother earth once more. There was more than an atom of truth in that old Greek legend which made Antæus invincible so long as he was in touch with earth. I could do heroic deeds on the banks of a trout stream. If you have lost your grip on things and life looks gray, try grasshopper fishing for trout before you invest in physic.

DURAND, WIS.

Violence and Votes

BY LUCIA AMES MEAD

AUTHOR OF "PATRIOTISM AND THE NEW INTERNATIONALISM," ETC.

WE have recently seen the private property of neutrals destroyed without compensation in the "war" in which English suffragets have engaged in London. Their violence was by no means the result of impulse, but was coolly planned and executed, and they did what is prohibited by all codes in actual war.

The primary reason why these women, many of them refined ladies of social position, engaged deliberately in such lawlessness, at the word of command from headquarters, was chiefly that their judgment had been warped by misinformation persistently drilled into their minds for years by leaders whose devotion and ability were unquestioned and whose statements and unfounded inferences were adjudged to be equally unquestionable. Two statements were reiterated vehemently on all occasions—one, that extension of the suffrage to men had usually been achieved thru violence, and only so could a stubborn Parliament be made to yield; the other, that all peaceable methods had been exhausted and nothing but violence, under the euphemism of "direct action," remained as the alternative to abject failure and submission. In explaining the situation to Americans, the militants always added a further argument, accepted by many Americans as valid: "This is only what your forefathers did when they threw the tea overboard."

As an earnest suffragist of a lifetime, permit me to review the real history

which concerns this matter and which, if truly understood by these militants, would have tempered their vandalism with discretion and prevented a most humiliating exhibition of fanaticism and much futile suffering in consequence.

Devotion to a cause, willingness to suffer pain and ignominy for it, must always command a sincere respect, either when the Hindoo mother throws her babe into the Ganges, when the Mexican *penitente* scourges himself with bloody whips and submits voluntarily even to crucifixion, or when a woman starves herself in prison to help attain the suffrage for her sex. Self-inflicted suffering will always win respect for sincerity; but inflicting suffering on the innocent is quite a different matter. The first, in the English situation, inspired admiration and brought accessions to the cause; the second has inspired a revulsion of feeling, in which not only the guilty suffer, but the great body of law-abiding suffragists are compelled to suffer also, to see the Conciliation Bill defeated, and to see their cause brought into ill repute.

A teacher who has promised her class a boon whenever the head master should announce the time for it had come is hardly to be blamed if she withholds it still, after that time arrives, if a part of the class, enraged at having to wait, seeks to intimidate her by smashing school-room windows. In like manner, a pledged majority of the House of Commons turned into a minority because they felt that Parliament must not yield to in-

timidation, lest it put a premium on violence and ensure its continuance through every successive stage. Parliament, in the last century, in extending suffrage to men, in 1832, in 1867 and 1884, never did so because of intimidation. There was some violence, but never any organized by reformers. It was wholly the result of momentary impulse and generally from the lowest orders of society. It was in absolute contrast to the organized, deliberate violence of the suffragets.

In 1831, the Reform Bill passed the House of Commons without any violence after a long period of oppression and suffering, in which there had been riots over the introduction of machinery which threw men out of work. The hostility to the Reform Bill by the House of Lords, however, did irritate the masses. Nottingham Castle, about which the militants talk so much, was set on fire and partially destroyed. A mob of vagrants broke into wine-cellars in Bristol and, after becoming intoxicated, set fire to many buildings, and some, too drunk to escape, perished in the flames. This, says one historian, was done by men "probably not one in twelve of whom had ever heard of the Reform Bill." All of the writers upon this subject show the utterly rude and irresponsible character of these mobs. Some of the rioters perished on the scaffold for their offense. In connection with this largely irrelevant and always sporadic violence, immense lawful pressure was brought to bear on the Lords, and, finally, the threat to create more peers won the day and the bill became law in June, 1832.

Granting for the sake of argument that these mobs had some influence and really affected the Lords and the King with precisely the reverse emotions from those with which violence usually affects authorities, and, instead of making them more stubborn, made them more lenient, one must ask, is this hooliganism of hungry, drunken mobs eighty years ago a precedent for the deliberate, organized violence of women in this age who have ten times the political and industrial rights which those downtrodden, illiterate men had in those days?

There was rioting over the Chartists' claims in the forties. But absolutely nothing was gained by it. One of their

demands—universal suffrage—is not yet granted, and others were slowly conceded after all violence had ceased.

So late as 1866, three men out of four in England were as unable to vote for Parliament as women are today, and most of them lacked the municipal suffrage which many English women now possess; yet none of their leaders advocated or were responsible for any violence in the effort for the extension of the suffrage.

In March, 1866, Gladstone introduced a Reform Bill. On July 23, the reformers, being refused what they thought to be their right to assemble in Hyde Park, quietly withdrew and went elsewhere; but it was afterward shown that their claim to hold their meeting in the Park was legal. However, certain of their rank and file together with "mischievous boys and ordinary London roughs" (McCarthy), crowding around the palings, felt one of them yield and impulsively made a rush, knocking the palings over for half a mile. This was spectacular and therefore much talked about. It was one lawless among a hundred lawful and orderly measures which brought about the passage of the bill thirteen months later, in August, 1867; as already said, it was utterly unauthorized by the reform leaders and without any previous knowledge on their part. It is grossly inaccurate to attribute the passage of the bill to this incident, which was almost accidental and with which the reform leaders had nothing to do. The further extension of the suffrage, in 1884, was unaccompanied by violence.

As to the throwing of the tea overboard in Boston, a supposed precedent, cited *ad nauseam* by English militants here, there was a slight superficial resemblance, but the difference was essential and fundamental. The act was not vandalism, committed merely as a hostile demonstration. The serious men of Boston waited anxiously until the twenty days required by law had nearly expired, beyond which no cargo could remain on shipboard. The successful landing of the tea would have defeated the whole contention of the colonists in their great struggle. The captain of the "Dartmouth" had yielded and consented to take the tea back to England, but the Gover-

nor commanded the ship to be fired on if it sailed without a proper permit. This was not to be obtained. The eyes of all the colonies were on the men of Massachusetts, who were acting for them all. They acted solemnly and, assembling in the Old South, waited until they had lighted the candles, "determined not to act until the last legal method of relief should have been tried and found wanting," which situation came with the refusal from Governor Hutchinson to grant the permit. The future of the country was at stake. Then, and only then, was the tea destroyed, not because the men of Boston wanted to destroy it, but because it was made impossible to return it to England or to leave it on shipboard, and to land it meant the overthrow of their liberties. Had it been sugar, or flour, or anything but tea, it would have been wholly different. Mere destructiveness as intimidation was the last thing thought of. But it was a matter of indifference to the English militants what they destroyed, so long as it was easy for them to smash it. There was scarcely a point of resemblance between their vandalism and this historic event. History has justified that event. Will history justify the destruction of private property on Regent and Oxford streets when women, armed with hammers in bags, at a signal smashed windows in order that by a spectacular demonstration they might get the suffering owners of the property to rush to the House of Commons and espouse their cause? They reckon ill who leave out human nature from account, as the result proved.

The appeal to the example of the American Revolution by the suffragets in justification of their course is of all things most unwarranted. The temper and method of the two movements were absolutely unlike. The famous watchwords of the Boston Revolutionary leaders, "Do not fire unless you are fired upon," "Always keep the enemy in the wrong," etc., are expressions of the scrupulous lawfulness and self-restraint which marked the whole trying decade preceding the hostilities, which they did not begin. Students of history will remember the condemnation by the responsible men of Boston of the mob which sacked the house of Governor Hutchin-

son. They will also remember that no less a man than John Adams promptly offered his services to defend the British captain after the Boston massacre, to ensure the lawful and orderly disposal of the case. It is as unfitting for the patriotic American to sanction the appeal to the leaders of the Revolution in this matter as it is unworthy in every suffragist, American or English, to seek to trace apostolic succession from the hoodlums of Nottingham Castle, Bristol and Hyde Park.

Men, to be sure, have committed far worse crimes and been punished more lightly by English judges than these women, who have just cause for impatience. But two wrongs never made a right. Do not the condoners of their vandalism show an astonishing incapacity to perceive relative values when they cry out that "Parliament should remember that the blood of the martyrs is the seed of the church?" Pray when have martyrs ever thrown stones at the men who sent them to the rack and stake? Was it not their Christlike willingness to suffer without reprisal that placed the halo around their heads? The perverse ratiocination which creates euphemisms like the word "protests" for throwing brickbats, which conjures up visions of thumb-screws and Iron Virgins by the word "torture," as applied to forcing nourishment upon would-be prisoners and would-be suicides, does not commend the militant sense of fairness to the public, which is inclined to ask, "If they choose voluntarily to go to prison, why don't they act like good sports and not complain when they get what they want?"

Spite of our pity for their suffering and gratitude for the great help they earlier gave the movement, loyalty to our cause and love for certain militants who may be charming personally does not require us to repress our condemnation of recent methods, never deliberately employed by English men to attain their vote and never by English women in attaining the political rights that they already possess, which include sitting on County Councils and being mayors.

As to the militants' claim that they had no alternative, the answer is that they had scores of legal methods quite spectacular enough to keep their cause ever

present to the public mind. If every suffragist had vowed to wear mourning, with no ornament but a "Votes for Women" badge, to abstain from all amusements, to purchase of suffragists alone, to strike, as in the play, "How the Vote Was Won," or to do any one of a dozen similar things, their devotion and nerve would have been equally evident, and they would have retained the respect of all the world. American suffragists, knowing that violence would never be employed here, have been too loath to criticise actions due, as they say, to "conditions we know nothing of." But the principles of ethics and of human nature which govern Christians and Anglo-Saxons are essentially the same in London as in New York. Our best help to the cause is to reprobate boldly the employment anywhere of those methods of

doing evil that good may come, which in modern times have never thus far won a single vote for any man or woman.

Criticism of any of those who are zealous for one's own cause is not easy nor pleasant; but, as Arnold of Rugby well said, "The measure of my love for any institution is the measure of my desire to make it better," so we suffragists may gauge our love for our just cause by our desire to purge it of every feature that is unworthy. At a time when the world generally is working to supplant the hoary old methods of force by the methods of law and order, it is singularly untimely for a cause which has been peculiarly based on right reason and right feeling to seek to reverse the process: and it is doubly culpable for those seeking to do this to fortify their conduct by a false appeal to history.

APRIL, BOSTON, MASS.

The Public Trustee in England

BY SCOTT BOWEN

SINCE the present Liberal Government of England took office, in December, 1905, it has carried out many social reforms. Most of these have justified themselves in practice, altho subjected to bitter criticism in the preliminary stages, but none has more amply proved its usefulness than the institution of the office of Public Trustee, which has just completed its fourth year.

The defaulting trustee and the dishonest family lawyer have long been familiar characters in English fiction, and unfortunately, too, in English life. Widows and orphans have seen their all swept away by the roguery or ineptitude of those on whom the dead breadwinner relied to protect them. Every English town and village knows of such cases, and every English workhouse contains women who "have seen better days," and whose misfortunes are due to the breach of trust of some lawyer or business man. No one knows how many millions have been lost in this way, for prosecutions for such defalcations have been the exception rather than the rule, and there

have been more losses from honest incompetence than from dishonesty.

Such cases still occur, but that they do occur is the fault of testators who have failed to realize that now the State, thru its official, the Public Trustee, is ready to undertake the duty of safeguarding the interests of the widow and the orphan. The rate at which the business of the office is growing, however, is ample evidence that England is realizing the value of the new institution. That it has not grown even faster is due to the opposition of lawyers and bankers who have made a good thing in the past out of trustees' and executors' fees, and who naturally resent having such a source of income taken away from them. It must be said to the credit of the best lawyers and bankers in England, however, that they have abandoned this source of income gladly. Many of them long have deplored the temptation offered to certain members of their profession by the old system, and have endeavored to induce clients to entrust their estates to the new Government department.

CHARLES J. STEWART
The Public Trustee

The duties of the office of the Public Trustee are exactly described by his title. He is prepared to undertake any trust. No estate is too small or too large for him. He has at present in his office the administration of wills disposing of as little as \$100 and of as much as \$1,000,000. He has undertaken the administration of marriage settlements and of annuities to "ne'er do weel" members of prosperous families. The payment of alimony under divorce settlements is one of his regular duties, and the investment and reinvestment of trust funds occupy much of his attention.

It is obvious that in the administration of an office of this sort much depends on the personality of the man at its head. A dry-as-dust official may by strict integrity achieve a limited success, but he will never make the office popular. A man with humanity and imagination can place himself, really as well as officially, *in loco parentis* to his many charges, and that is what the present trustee, Mr. Charles J. Stewart, has done.

No happier choice to organize such a

department than that of Mr. Stewart could have been made. On the business side there was no doubt about his ability. He had been connected for some years with the office of the official receiver in bankruptcy, and his last achievement before his appointment to his present office had been to take charge of a great brewery, which had fallen on evil days, and in two years place it on its feet again as a profit-earning concern. On the human side he was unknown, but he has proved himself in this respect also to be the right man in the right place.

How important the human element is may be realized when it is known that Mr. Stewart now stands in the relation of parent to 750 children. About fifty of these have no living relatives. One of his duties in connection with many of these children is to place them at school, keep track of their progress just as a parent would, and even to supply them with pocket money. Postal orders ranging in value from 50 cents to \$10 are sent weekly from his office to his young charges, and parcels of clothes and linen are sent at regular intervals. At Christmas time he even saw that the friendless fifty had presents, and for a few days in December one of the rooms in his office resembled a big toy store.

I asked him recently what he considered the most novel duty that had yet fallen to his lot, and he replied that it was the purchase of a wooden leg for a crippled girl. This was a case which had come to him under the Workmen's Compensation Act. The girl had been injured in a factory and had been awarded a lump sum and a weekly allowance as damages by the court. Her parents were not fit persons to have the administration of this money, so the court placed her in the charge of the Public Trustee until she came of age. Mr. Stewart found a convalescent home for her, and when she was discharged cured bought her a wooden leg and placed her in a boarding house, where a woman on his staff visits her at regular intervals to see that she is comfortable.

Another rather strange activity is the payment of alimony under separation orders. This form of domestic disarrangement is much commoner in England than in the United States, because in Eng-

land divorce, no matter how strong the grounds, is a luxury reserved for the rich. A poor man or woman who wants to get rid of an impossible partner can only go to the police court and secure a judicial separation. When the husband is to blame he is ordered to contribute a certain proportion of his weekly income to the support of his wife and family, but it has been found that the visits of the wife to collect her allowance often led to further trouble and made more work for the police courts. A good many of the police magistrates, therefore, have adopted the system of asking the Public Trustee to act as go-between. The man pays his money in at the trustee's office and the wife calls for it. They do not meet and trouble is avoided. Even in the higher walks of life the same system has been adopted in many cases. Divorce alimony is paid in to the Public Trustee's office and paid out again by him. This branch of his work has enabled Mr. Stewart to exercise his tact and humanity, and I am told that his good offices have been used more than once to bring separated husbands and wives together again.

One of the best features about the working of the office is its simplicity. No elaborate formalities are necessary to take advantage of its services. An Englishman who is making his will has only to add the words "I appoint the Public Trustee my executor and trustee," and as soon as he is dead the Public Trustee steps in and takes charge. There can be no loss from defalcation, for the Public Trustee's honesty is guaranteed by the British Government, and there can be no loss of capital, for the safety of the capital is guaranteed in the same way. Of course, a shrewd and capable trustee may make more advantageous investments than a lax and inexperienced man, but even a man of ordinary ability in the Public Trustee's office has the advantage over a clever financier in dealing with small estates. By pooling a number of estates he is able to take advantage of the market and buy securities in large quantities, and he is also able in the same way to get rid of investments that have ceased to be remunerative. In the matter of investment he is not limited to what are known in this country as "trus-

tee securities," but has a wide range of choice. The risk of loss from speculative investment is taken by the Government, but of course this risk is avoided. There are hundreds of good and profitable industrial investments which are outside the "trustee" class, but which are perfectly safe in the hands of a skilful and experienced business man with power to dispose of them at any time that he thinks it advisable to do so.

Another advantage of the new system is that it is much cheaper than the old one. The old trustee was entitled to fees on a rather high scale, and if he was a lawyer, as was usually the case, he earned fees every time a change of investment was made, or in fact every time he took any step of importance in dealing with an estate. The Public Trustee's office aims at earning no profit. At present an estate of say \$50,000 pays a fee of \$150 on coming into the office, and if it earns \$2,000 a year it pays a fee of \$20 a year, which it is estimated just covers the cost of handling. It is hoped that as the business of the office increases it will be possible to reduce these fees materially. Every effort is made to keep down the expenses of the office. For instance, instead of employing a lawyer to advise him, the Government has given Mr. Stewart the right to call on a High Court judge at any time for legal advice.

How the office has been appreciated by the public is shown by its growth. Mr. Stewart established it on January 1, 1908, in two rooms in Clement's Inn, beside the London Law Courts, with a staff of five clerks. Now he occupies sixty-two rooms and has a staff of 220 men clerks, in addition to a number of women visitors, who are specially employed to look after the welfare of the children in his charge. Permanent quarters are being erected for the office in Lincoln's Inn Fields, but these will not be ready for a couple of years, and in the meantime the staff is overflowing into temporary buildings.

In his first year of office Mr. Stewart became trustee of 325 estates, having a total value of about \$10,500,000. Last year he dealt with 1,053 estates. Of course, a good many of these trusts are discharged quickly. He has now in hand

1,390 estates, of a total value of a little over \$185,800,000, and the total business present and future negotiated up to the first of the year is about \$300,000,000. In addition to this, he is in communication with about 2,000 intending testators, who have announced their intention of appointing him under their wills, and whose estates amount to about \$200,000,000. But this is by no means the limit of the business which may legitimately be expected, for the majority of testators do not communicate their intention beforehand, and usually the first that the Public Trustee knows of his appointment is when a will is read, after the death of its maker. In 1909 the Public Trustee dealt with estates of the value of a little over \$20,350,000, and in fifteen months of 1910-11 with estates amounting to a trifle more than \$44,400,000. The average value of the estates at present in his charge is \$150,000.

Of course, there has not been a penny of loss in dealing with this vast sum of money, and the charges on it have been many thousands of dollars less than they would have been had they been handled by private trustees. Above all, there has been only one charge, for, like the King, the Public Trustee never dies. Under the old system, if a trustee died and a new one had to be appointed, there was a fresh set of charges, and probably the new trustee would feel it his duty to vary the investments, thus giving rise to more expense. The Public Trustee's

one per cent. a year for management covers all these charges. On capital the fees are as follows, and are only charged once: On the first \$5,000, $\frac{3}{4}$ of 1 per cent.; on the excess of \$5,000 to \$100,000, $\frac{1}{4}$ of 1 per cent.; on the excess of \$100,000 to \$250,000, $\frac{1}{8}$ of 1 per cent.; and on everything over \$250,000, 1-16 of 1 per cent.

The advantage of the Public Trustee's wide power of investment is shown by the fact that his trusts have returned an average of four per cent. per annum, which is a high return in England.

A notable development of the last year is that a large number of private trustees have applied to be relieved of their responsibility and to have it laid on the Public Trustee. These have included not only men newly appointed under fresh wills, who did not care to take up the burden laid on them, but also many trustees who have been acting for years and who have been glad to get rid of the responsibility, and at the same time give to those for whom they were acting the impregnable protection of the credit of the British Empire.

Other countries which are thinking of following England's lead should bear in mind that the Public Trustee's office has not cost the State a cent. It is entirely self-supporting, and in fact the financial year ending March 31, 1911, showed a surplus of about \$15,000 of receipts over expenditures.

LONDON, ENGLAND.

The Tryst

BY KATHARINE LEE BATES

I HAD come to the trysting place
To meet with Grief.
Like flint I had set my face,
Lest when the dark hour strike
My heart should crumble like
A withered leaf.

Under the aspen tree.
I waited till
The stars made sport of me,
Finding it curious
A soul should shudder thus
Before God's will.

A bell began to throb,
But ere it missed
The echo of my sob,
Like silver sunrise flame
Joy thru the shadows came
To keep the tryst.

WELLESLEY, MASS.

The Ohio Constitutional Convention

BY ERNEST I. ANTRIM, Ph.D.

DELEGATE FROM VAN WERT COUNTY.

ON the seventh day of June, 1912, the Fourth Constitutional Convention of Ohio concluded its session of five months, representing 82 working days, after having adopted 42 amendments. In the 110 years since its admission to the Union, Ohio has had two constitutions: that of 1802, which was drafted by 35 men in 25 working days, and that of 1851, our present Constitution, which represents the labors of 109 men during 135 working days. Our present Constitution provides for the calling of a convention every twenty years "to revise, alter or amend the Constitution." Such a convention, the so-called Third Constitutional Convention, met in 1873, finishing its work in 1874, but for several reasons the finished product of the convention was rejected by the people at the polls. Twenty years later, the people voted against a convention. The Fourth Constitutional Convention, called after the lapse of another twenty-year period, has just adjourned, and its work will be submitted to the people at a special election on the third day of September. All the forty-two amendments will be submitted on one ballot, the amendments to be arranged in the order in which they would appear, if adopted, in the Constitution, except the liquor amendment, which will be placed by itself on the ballot.

The Fourth Constitutional Convention came into being as a result of the great desire of the Ohio State Board of Commerce, a large organization of Ohio business men, to replace the general property tax with classification of property. After the campaign for the Constitutional Convention had been fairly launched, the liquor interests took advantage of the work that had been done and put forth their best efforts to secure the calling of a convention, believing that thru a convention they might succeed in getting a license clause in the organic law of the State. Finally, the united ranks of these two groups of men were augmented by

the advocates of the initiative and referendum, who wanted to make Ohio a thoroly progressive State by putting legislative power in the hands of the people. Now let us see what each of these three classes got out of the convention.

The three proposals, the passage of which was respectively secured by these three groups of men, occupied almost one-third of the entire session of the convention. Moreover, when one considers the fact that forty-two proposals were adopted by the convention, it can be readily seen that these three merit possibly more consideration than any of the rest. For sixty years Ohio has had the general property tax. In 1905, by an amendment to the Constitution, municipal bonds were exempted from taxation, this being the only exemption for individuals, excepting personal property to the extent of \$200 for each person. The taxation proposal adopted restores State, city, village, county and township bonds issued after the going into effect of the proposal, if it should be ratified by the people, to taxation, but increases the \$200 exemption to \$500. It also gives the Legislature authority to provide for inheritance taxes, income taxes, excise and franchise taxes and taxes upon the production of coal, oil, gas and other minerals. It prohibits any indebtedness of the State, or a political subdivision of the same, unless provision is made for the payment of part of the principal, together with the interest, each year. The taxation proposal of the convention was the most reactionary measure adopted, and by many is considered a backward step, for the reason that it will not permit progress in matters of taxation. This reactionary proposal may be explained by the fact that a 1 per cent. tax law was passed by the State Legislature in 1911 and has worked so satisfactorily in many parts of the State that most of the people, particularly the farmers, have become wedded anew to the general property tax.

Relative to the liquor traffic, Ohio has been a "no license" State since 1851, the date of the adoption of our present Constitution. The Constitution reads:

"No license to traffic in intoxicating liquors shall hereafter be granted in this State; but the General Assembly may, by law, provide against the evils resulting therefrom."

Under the latter part of this provision the Legislature has passed a very excellent body of regulatory laws. The liquor proposal of the Fourth Constitutional Convention is a license proposal, and it safeguards all the liquor laws on the statute books. It further provides that license shall be granted only to persons of good moral character who are interested in the business nowhere else, and who are citizens of the United States. It also provides that applicants for license must be the only persons interested in the business for which license is asked, that conviction for a second offense against the liquor laws of the State shall revoke a license, and that licenses shall be limited to one for every 500 population in townships and municipalities. Under municipal home rule, municipalities will have the right to further restrict the number of saloons within their corporate limits.

The initiative and referendum proposal passed by the convention provides for the direct initiative for constitutional amendments, the indirect initiative for laws, and the referendum for laws and parts of laws. One of the bitterest fights of the convention was on this proposal. The 119 delegates were divided into three classes: (1) Those who were opposed to the initiative and referendum, either altogether or unless well safeguarded; (2) those who favored the indirect initiative with reasonably high percentages, being bitterly opposed to the direct initiative in any form; and (3) those who favored only the direct initiative with low per cents. The convention passed a compromise proposal calling for the direct initiative for constitutional amendments only, with a requirement of 10 per cent. of the electors on petitions, and the indirect initiative for all laws, with a requirement of 3 per cent. of the electors on petitions. If a proposed law is ignored by the General Assembly, or is passed in its original or in an amended

form, it is subject to the referendum; tho it cannot be referred except on a petition signed by a supplementary 3 per centum of the electors, which petition shall state the form of the law asked to be referred, whether the original or an amended form. No law proposed by initiative petition shall be subject to the veto power of the Governor. Relative to the referendum, no laws passed by the Legislature, except emergency measures, shall go into effect until ninety days after their enactment. Meantime any law, excepting an emergency measure, may on the demand of a petition signed by 6 per centum of the electors be referred to the people for their adoption or rejection. By emergency measures are meant acts providing for tax levies, acts making appropriations for current expenses of the State government and State institutions, and measures necessary for the immediate preservation of the public peace, health and safety. Emergency measures must pass both branches of the General Assembly by an affirmative vote of two-thirds of the members. The proposal inhibits the use of the initiative and referendum to enact a law authorizing either single tax or classification of property for purposes of taxation, and provides for initiative and referendum in municipalities. The safeguards of the proposal have to do with the printing of the ballots, the form and signatures of the petitions, the distribution of the petitions thruout the State, and the enlightenment of the electors on all subjects on which votes are to be taken.

A careful study of the forty-two proposals adopted by the convention leads to two conclusions: (1) That the convention was a progressive body, and (2) that its work contributes most largely to the welfare of the so-called "plain people." Keeping these two facts in mind we will briefly consider the more important of the remaining proposals. In passing, however, we will state that there were 21 members of labor unions in the convention, and that possibly 50 of the 119 delegates were candidates for office, from Governor down to State legislator. Proposals having to do with courts and judicial procedure provide that in civil cases the General Assembly may authorize the rendering of a verdict by not less

than three-fourths of the jury, provide for the removal of occasions for the law's delay, make the administration of the law less expensive to litigants and the State, bring the administration of justice closer to those directly interested, permit the bringing of suits against the State, provide for the regulation of the use of expert witnesses and expert testimony in criminal trials and proceedings, provide for the taking of depositions by either the accused or the State and provide that the failure of the accused to testify may be considered by the court and the jury and made the subject of comment by counsel.

The labor delegates secured a lion's share of their demands, since proposals were adopted authorizing the legislature to pass laws regulating the hours of labor, limiting a day's work to eight hours and a week's work to forty-eight hours on all public work of the State or any political subdivision of the same, establishing a minimum wage, providing for the comfort, health and safety of employees, providing for workmen's compensation, providing that no injunction shall issue in any controversy involving the employment of labor except to preserve property from injury or destruction and securing for persons charged with violating an injunction in such controversy a trial by jury as in criminal cases, providing that prison labor and prison-made goods shall not come into competition with other labor and goods, removing the limit on the amount of damages recoverable for death by wrongful act or neglect of another, and securing to mechanics, artisans, laborers, subcontractors and material men their just dues by direct lien upon the property upon which they have bestowed labor or for which they have furnished material.

The farmers of the convention were especially instrumental in the passage of the good roads proposal, which provides for a bond issue of \$50,000,000 to build an inter-county system of wagon roads, and a conservation of natural resources proposal, which provides for the encouragement of forestry, the conservation of the water power of the State and the distribution of the energy derived from the same, and the regulation of the

methods of mining, weighing, measuring and marketing of minerals.

For the benefit of the women a woman's suffrage proposal was passed, as well as a proposal authorizing the appointment of women to positions in those institutions of the State where the interests of women and children are involved.

The negroes of the State were made happy by the elimination of the word "white" from the elective franchise article of the Constitution.

The interests of the people were further safeguarded by providing for double liability of stockholders of corporations engaged in the banking business, by providing for the classification of all other corporations as well as the supervision and regulation of their organization, business and issue and sale of stocks, by providing for the supervision and regulation of the marketing of the securities of foreign corporations and joint stock companies, and by providing against frauds resulting from the transfer of all personal property.

With respect to positions and elections proposals were passed (1) providing for the prompt removal from office, upon complaint and hearing, of all officers for any misconduct involving moral turpitude or for other causes provided by law, this proposal having been adopted as a mild form of recall; (2) providing for primary elections, excepting in townships and villages of less than 2,000 population, in which, however, primary elections may be had if a referendum vote shows they are desired; and (3) providing for civil service in the State and all the subdivisions of the same.

Two proposals were passed affecting the educational system of the State; the one making the superintendent of public instruction for the State an appointive office, and the other providing for the organization, administration and control of the public school system of the State, giving each city school district power by referendum vote to determine for itself the number of members and the organization of its board of education.

Perhaps the most radical proposal adopted by the convention was that giv-

ing municipalities home rule. This proposal provides that municipalities may choose their own form of government and exercise all powers within their corporate limits that are not prohibited by the general laws of the State. It further provides that municipalities may acquire public utilities, operate them, and sell, without the corporate limits, the product or service of the utilities to the extent of 50 per cent. of the product or service of the utilities used within the corporate limits, and that they may acquire property beyond their needs and sell the excess, and, by a vote of two-thirds of the council or on petition of 10 per cent. of the electors, the question of the creation of a charter commission of fifteen members shall be submitted to the people, the charter framed by the commission to go into effect on the approval of the electors.

Following the example of half a dozen other States of the Union the convention voted to abolish capital punishment.

Practically the only change made in that article of the Constitution which provides for the method of amending the Constitution is that amendments shall be adopted if they receive a majority of all those voting on the same instead of a majority of those voting at the election, which will make the amending of the Constitution a much easier matter than it has been for the past sixty years.

One of the interesting features of the convention was the addresses delivered from time to time by distinguished men. The convention was first addressed by the mayors representing the three largest cities of the State—Cleveland, Cincinnati and Toledo. Next, Judge Lindsey, of Denver, appeared before the convention and spoke on the initiative and referendum in his State. Then came President Taft, who made only a short talk, and gave the convention no advice whatever, simply saying that he would express himself by his vote when the amended Constitution was submitted to the people in the fall. Governor Harmon followed President Taft, and delivered a very able address containing his ideas on a number of subjects. The two chief features of the address were

his disapproval of the initiative and referendum and his recommendation that a clause licensing the liquor traffic be embodied in the Constitution. Ex-President Roosevelt gave his views on the great constitutional questions of the day, announcing his approval of the initiative and referendum and the recall of judicial decisions. Governor Johnson, of California, advocated, in a very forceful address, the initiative and referendum, the recall of judges, and woman's suffrage. William Jennings Bryan advocated the same reforms so ably considered by Governor Johnson, adding to the same the guarantee of bank deposits. The last two speakers, Senator Burton and ex-Senator Foraker, devoted their whole time to an exhaustive consideration of the initiative and referendum, which they denounced with great emphasis.

The convention consisted of 119 delegates from Ohio's 88 counties, all of whom were elected on non-partisan tickets. Politically, however, they were divided into 65 Democrats, 48 Republicans, 3 Independents and 3 Socialists. From the standpoint of vocations there were 48 lawyers, 25 farmers, 7 bankers, 6 teachers, 4 ministers and 27 who belonged to a great variety of other callings. The convention had many good men among its members, and was considered by some the ablest body of men that has ever represented the State. Among the lawyers there were a number who have occupied high positions in the State and nation. Among the farmers there were agriculturalists who are well known beyond the borders of the State. Among the bankers there were several men who are considered authorities on matters of finance. Among the educators were two or three men who occupy leading educational positions in the State and have written very extensively on educational subjects. The remaining classes also contained distinguished men who have contributed more or less to the advancement of Ohio. If the convention of 119 men were to be named, it would be called a body of progressives possessing some conservative tendencies.

Republicanism in Europe

MR. FISHER is the most distinguished of the school of younger historians at the University of Oxford, and anything he writes will be read with pleasure, because he has many of the elusively charming qualities of style which characterize the great Maitland; and it may be said of him, as was said of one of his countrymen, "his lightest word is weighty." Mr. Fisher's new volume,¹ outlining the course of republican thought and action from the fall of the Roman Empire to our time, is based on a course of lectures delivered by him at the Lowell Institute in 1910, and is all the more pleasing because it has a certain touch of colloquy about it. It is a peculiarly welcome volume, because there is nothing in the English language on the subject, and indeed Mr. Fisher has been compelled to do most of his searching for himself, because his theme has never received unitary treatment by any one with methodical and scholarly habits of thought. Here are brief and illuminating pages on republicanism in medieval thought in Venice and Florence, and in the Puritan spirit; here is republicanism as a philosophy and accident in the French Revolution; republicanism in poets and the revolutionaries; republicanism in France, Italy, Germany and Spain. No significant thing and apparently no distinguished character in the history of republican thought have escaped the searching eyes of the author. He has little sympathy with the abstract idea of republicanism hardened into dogma, but he generously evaluates the noble enthusiasm and sanguine idealism of youth, even when recognizing the tempering fact that history generally deals roughly with both idealism and enthusiasm. To our author the upshot of the whole matter is that republicanism is being overshadowed by socialism and other causes of our day; and, in fact,

"The republican movement has done its work." Its ideals have been appropriated in the political systems of Europe and used with more or less completeness and most of the domestic program of 1848 is now fixed and embodied in the institutions of the Continent.

In his introduction to a French survey of the field for republicanism in Europe, M. Gabriel Hanotaux writes to much the same effect. We quote from his introduction to M. Meynadier's volume:²

"After 1848, the constitutional question was to the fore; the peoples hesitated between monarchy and republic. A little later it was the electoral question: The extension and the conditions of the suffrage. Today, it is the social question: 'What matters the form, provided that the result be attained'; and the result sought is a better state of things for a greater number."

M. Meynadier reviews briefly the republican movement in Spain, Italy, Hungary, Belgium and Holland—not failing to note present tendencies. His report is, to sum up, favorable to the monarchic principle: the forces (locally different) which work for the conservation of this régime seem, he says, to prevail over "the forces of disintegration." Doubtless this is the conclusion which the author would prefer to make, but he must be commended for the judicial attitude which distinguishes his chapters. That on Belgium will be found uncommonly instructive in the present crisis.

Woodrow Wilson and New Jersey Made Over. By Hester E. Hosford. New York: The Knickerbocker Press. Editions at 75c., \$1 and \$1.50.

The fight for popular rights and purer politics that Governor Wilson has been making in New Jersey has unquestionably appealed to the sporting spirit of the masses, as well as to the sound judgment of the more thoughtful elements of society. It is extraordinary, almost to the point of the spectacular, that a college teacher and administrator, who

¹THE REPUBLICAN TRADITION IN EUROPE. By H. A. L. Fisher. New York: G. P. Putnam's Sons. Fifty cents.

²L'IDÉE RÉPUBLICAINE DANS LES PAYS MONARCHIQUES D'EUROPE. Par Robert Meynadier. Paris: Felo Alcan. 3 francs, 50.

skilled in practical political maneuvers, and elected by a tried and self-confident political machine, should turn on the bosses who sought to make him a cat's-paw and in battle after battle beat them down with the very weapons they had placed in his hands, and that this man should step forth from the favored sphere of educational work and in a dignified yet democratic and most human way champion the cause of the common man against the special privileges of his own class or any other. Such a course anywhere would be remarkable, but when wrought out in a State so conspicuous as New Jersey for its social cleavages and its indifference to corrupt political management, it produces a striking effect upon the popular imagination and gives the wisest food for thought. "For if they do these things in a green tree, what shall be done in the dry?" Miss Hosford has given in her book on *Woodrow Wilson* this spectacular phase of the Governor's career, with some of the personal and local conditions which have made it possible. The volume does not contain a serious study of its subject's life or political principles nor a connected story of his work as Governor, but these are all incidentally exploited to illustrate and defend his struggle for leadership in the interests of the people. Hundreds of quotations are given from Governor Wilson's speeches and writings, and in spite of the disordered and noisy method of presentation, the reader may gather from the volume a fairly correct notion of Dr. Wilson's character, political philosophy and aims, as well as his ability to cope with political obstructionists.

The Religion of Democracy. Revised Edition. By Charles Ferguson. New York: Mitchell Kennerley. \$1.

Mr. Ferguson, when he left his church, did not abandon his vocation as a preacher. He only climbed into a higher pulpit, where he speaks to a million every day instead of a few hundred once a week. His message, whether he takes for his text "The University Militant" or *The Religion of Democracy*, is the same, a sort of inspired pragmatism, a creative evolution of soci-

ety, looking toward a democratic imperialism in which the United States shall lead.

"The rise of democracy as a universal spiritual power would follow the rise of a nation disinterestedly devoted to the cause of creative liberty, a nation that should escape from rapacity and blundering incompetence, as no other nation has yet done, and *shall storm the world into a capitulation to science and the arts.*"

The reader always gets from Mr. Ferguson a certain mental excitation, even an emotional uplift, but he will probably be dissatisfied at the slight residuum left in his mind after the current of the author's eloquence has swept thru it. This is largely due to Mr. Ferguson's fondness for using old words in a new sense—a sense of his own. We really do not know what he means by the Church and the University about which he talks so much except that they must be something very different from the churches and the universities of today, for which he has nothing but harsh language. So, too, his democracy is obviously not what is generally understood by that term, as may be inferred from his definitions:

"Democratic government is the concurrence of the most forceful and effective persons in society to the ends of beauty and justice."

"Democratic government is the standing together of a multitude of men who could each stand alone. Its business is to balk the mob of the fraudulent gains of a sordid good-fellowship and to brace them to moral independence."

"The mission of democracy is to put down the rule of the mob."

"A mob is the crowd corrupted by unrealizable abstractions."

California. Its History and Romance. By John S. McGroarty. Los Angeles: Graf-ton Publishing Co. \$3.50.

We are told by its publisher that this new history of California had a sale in advance of publication to the amount of ten thousand dollars, that it "reads like a novel," and that its author has been called "the 'Sweet Singer' of the Southland." As we look into its pages, we discover that when dull prose fails (tho we are far from saying that Mr. McGroarty's impassioned prose is ever dull) its author reverts to verse and sings the praises of his State. He attempts to tell, in popular form, the history of California from the earliest days

to the admission of the State. In a concluding chapter he sketches the significance, as he sees it, of the missions, the Pacific railroads, irrigation, the rebuilding of San Francisco, and the Owens River aqueduct. These he calls the "five distinct miracles of achievement" which California has contributed to "the world's history of commercial and industrial progress" (275). The work is garrulous, oratorical and careless; Spanish names are printed inexactly; the names of Frémont and Kearny are incorrectly printed; and we are offered the astounding piece of information that William Tecumseh Sherman "never, till his dying day, failed to kiss every pretty girl he met" (110).

Ebenezer Rockwood Hoar. A Memoir. By Moorfield Storey and Edward W. Emerson. Boston and New York: Houghton Mifflin Company. \$1.50.

The story of the last generation of men who made the antebellum period great—the resistance period, when the forces of evil in the slave problem invaded the free States and tipped the overseer's whip with a snapper even in the courthouse in Boston—could hardly be complete without some account of the two brothers Hoar, born in Concord. Ebenezer Rockwood Hoar, son of old "Squire Hoar," who "lived all the beatitudes daily," and eldest brother of the famous Senator who so long kept the Senate of the United States clean and sweet with scholarship and sound learning, as well as with an unique wit, was a Concord child, loyally born in the spirit that made Concord the center of the muster of men who made the town so busy on the morning of April 19, 1775. His life, so his biographers tell us, "was spent within a few rods of the house where he was born. His father's house, his own house, the home where his wife was born and lived, the school where he was fitted for college, were all within a circle of less than twenty-six rods radius." To Concord he was faithful all his life. Tho a Unitarian and not in general a user of the Book of Common Prayer, he accepted one phrase of its invocations, and thought full justice was done to his native town when he prayed, "O God, who art the author of peace

and lover of Concord," while he smiled with scorn on the evil genius who suggested Milton's allusion, "Oh, shame to men! devil with devil damned, firm Concord hold." The Concord spirit and the sharp thrust of law went with him into Grant's Cabinet, and into the Arbitration Court that settled our differences with England in the Alabama case, still "chasing the redcoats down the lane," and administering justice after a fashion better known in New than in Old England at that time. The gist of his story lies in the period beginning with the Civil War, but the choice bits are to be found in the aftermath, when the stern judge, as has just been said, unbent among his neighbors. In his reform spirit he belonged to the order of men whom Lowell and Lincoln loved and over whom some of our present-day aspirants for a seat in the White House would wrinkle their brows. "Tho open to great and commanding reforms," say his biographers, he "had a great respect for law and order, tested new nations by strong common sense, and his native love for old usage made him throw the burden of proof on the newcomer." The biographers show with clearness the democratic quality of the man and the spirit of the old democracy that made such men possible.

Songs of the Road. By Arthur Conan Doyle. Garden City, N. Y.: Doubleday, Page & Co. \$1.

Criticism is disarmed by the foreword:

"If it were not for the hillocks
You'd think little of the hills;
The rivers would seem tiny
If it were not for the rills.
If you never saw the brushwood
You would underrate the trees;
And so you see the purpose
Of such little rhymes as these."

A poet who can excuse himself so prettily need nowise fear the reviewer. Even the first flippancy that comes tripping to his pen: "Here, at least, a pedestrian muse is clearly labeled; for these be *Songs of the Road*"—is not to be seriously inscribed. The title is, in its way, misleading, for this is not a group of out-of-door lyrics in praise of tramping. On the other hand, the first poem in the collection, Sir Arthur's Corona-

tion ode, is in many ways the weakest offering here, partly because it is the most pretentious. It has not, to be sure, any lines so ridiculous as most of those making up the Durbar hymn published in the *Hindustanee Review*, with its recurring rhymes of "gorge" and "George." Humor is represented by such verses as those entitled "The Arab Steed" and "A Post-Impressionist": about the Peter Wilson, A. R. A., who, "in his small atelier,"

"Studied Continental schools,
Drew by Academic rules,"

and was a failure till an accident happened to his "canvas for the year,
("Isle of Wight from Southern Pier)," which, rescued from the ashbin,

"Mud-bespattered, spoiled, and botched,
Water-sodden, fungus-blotched,
All the outlines blurred and wavy,
All the colors turned to gravy . . .
A pea-green mother with her daughter,
Crazy boats on crazy water,"

greatly impress the pompous little critic Willoughby:

"What's this? What's this? Magnificent!
I've wronged you, Wilson, I repent!
A masterpiece! A perfect thing!
What atmosphere! What coloring!
Spanish Armada, is it not? . . .
I pledge my critical renown
That this will be the talk of Town."

Some of the more or less military and colonial verses are reminiscent of Kipling, but in a grateful and unplagiaristic manner. Altogether, we are happy to have these *Songs of the Road*, tho they are, as their modest author warns us, unconsidered trifles. It is only when he aims high indeed that Sir Arthur's pop-gun misses fire.

The Important Timber Trees of the United States. A Manual of Practical Forestry. By Simon B. Elliott. With 47 illustrations from photographs. 12mo, pp. xix, 382. Boston: Houghton Mifflin Co. \$2.50.

If the author of this volume had been a *litterateur*, writing stuff to catch the casual reader, he would have begun with Spenser's catalog of forest trees in the beginning of his "Faery Queen," but he is a careful student of forestry and gives us the useful, dry facts which students of forestry, lumbermen and farmers need to know. Thus the pods and seeds of the locust are described, but nothing said of its sweet blossoms. He does not

believe that at present prices the setting out of forests is profitable, but expenses will not increase, and the price of lumber will so far increase in the next fifty years that a forest will yield a fair income, as it does in Europe. Of the number of trees described, forty-seven are photographically illustrated. Particularly valuable are the descriptions of the several trees, giving at length their value for lumber and incidentally for parks as ornamental trees. The very valuable white oak is likely to become scarce, as it is a slow grower and cannot be safely transplanted. The pin-oak is the most beautiful of all oaks, and a quite rapid grower. The hemlock is the most beautiful of all the evergreens in the world. The wild cherry is the most desirable of all native woods, except the black walnut, for cabinet purposes, but like that tree, is destined to extinction as a lumber tree. We commend the book most heartily for the use of the student.

Lost Farm Camp. By Harry Herbert Knibbs. Boston: Houghton Mifflin Co. \$1.25.

Does every primeval forest or mountain mining camp contain a rough but kindly old man, with a beautiful motherless daughter, just waiting for a handsome young college graduate to appear, and educate, love, and marry her? This interesting phenomenon has occurred in fiction located in almost every primitive region of America, from the Southern mountains to the Klondike, and if in the investigation of it in the untrodden wilds of South, West and Far North the Maine woods have thus far been neglected, they remain so no longer. In *Lost Farm Camp* the general features are about as usual, with only the differences that the local color is contributed by lumbermen instead of miners and moonshiners, and we are near enough to Boston for its super-refining influence to make itself felt in the wilderness in a way not to be observed when the nearest centers of civilization are Seattle, or San Francisco, or Nashville, Tenn. While boasting nothing original in its plot, the book is rather lively reading, and one tragic incident, the breaking of a huge jam of logs in a northern river, is described with real dramatic power.

Literary Notes

....*The Story of Korea* is a comprehensive, serviceable and judicial volume of 400 pages by Joseph H. Langford, late British Consul at Nagasaki, Japan, and author of "The Story of Old Japan." (Scribner; \$3.)

....The publishing house of Moffat, Yard & Co. will hereafter be housed under the roof of the John Lane Co. Altho the financial and business interests of the former will be looked after by the managing director and vice-president of the John Lane Co., the editorial departments will continue to be managed independently.

....*The Theology of a Preacher* (Eaton & Mains; \$1), by Lynn Harold Hough, will add nothing either to theological knowledge or to the reputation of the writer. The method of approach to the subject is good, but the work is crude and affected in style and superficial in thought. The reader who has the patience to get thru half a dozen chapters will not dispute the author's assertion that he "knows the meaning of a true heart and a confused brain."

....Among the learned writings which make up the four numbers of the forty-eighth volume of *Studies in History, Economics and Public Law*, edited by the Faculty of Political Science of Columbia University, are monographs entitled *An Encyclopedist of the Dark Ages: Isidore of Seville*, by Dr. Ernest Brehaut, and *The United States Beet-Sugar Industry and the Tariff*, by Roy G. Blakey (New York: Columbia University; Longmans, Green & Co., agents).

....*Polly of the Hospital Staff*, by Emma C. Dowd (Houghton; \$1), will find popularity in hospital wards; it will appeal also to the general reader, old and young. Little Polly, the heroine, is the spirit of cheer in the children's ward; every one becomes dependent on her. That is why she receives a regular appointment. Here is a tale of unselfish service and deserved rewards, with a smattering of romance between nurse and doctor.

....A most ingenious use of the spondee, to be found in John G. Neihardt's *The Stranger at the Gate*, should do heart's good to Prof. Brander Matthews, who has so disobligingly exiled that useful member of the company of versification. Neihardt knows what he is about. A taking lilt for the ear, a tripping measure for the light fantastic digit, and still out of the lilt and the tripping measure the poet's sound sense finds its way to many beauties of song. More will be heard, we hope, of Neihardt. (Mitchell Kennerley, New York; \$1.)

....A few years ago the scattered essays of Asher Ginzberg, one of the ablest of present day Jewish leaders in Russia, were collected and published in three volumes under the author's favorite pseudonym, Ahad Ha-'Am. Several of these have been chosen by Leon Simon, as fitly representing Ginzberg's views on Jewish questions, and translated from the original Hebrew into forceful English under the title of *Selected Essays of Ahad Ha-'Am* (Jewish Publication Society).

....The volume, *Abbreviations and Technical Terms Used in Book Catalogs and in Bibliographies*, by Frank Keller Walter (Boston Book Company, pp. 167; \$1.35), is divided into sections showing the meanings of abbreviations and terms in the various languages, classified separately: English, French, German, Danish-Norwegian, Dutch, Italian, Latin, Spanish, Swedish. There are also lists of honorary titles, and of places of publication. There are points here for the captious critic to pounce upon; if, for example, *relié* means "rebound," what is the word for *bound*? But the compilation will be found useful by librarians and bibliophiles.

....Has Gaston Leroux, in *The Man with the Black Feather* (Small; \$1.25), written a story of dual personality like "Dr. Jekyll and Mr. Hyde," or has he concocted a mystery tale out of the theory of reincarnation? Whatever it may be, there is no doubt that thru the translation made by Edgar Jepson, M. Leroux has created, in his prosaic Parisian manufacturer of rubber stamps, a most startling character. For a short while one can be amused by the curious display of a nature which repeats itself. The text is riddled with italicized lines, supposed to reflect the exact nature of another person. Such a story solves nothing, however. It simply suggests, for romantic purposes, that the prosaic little tradesman of Paris had existed before in the person of a remote criminal ancestor. Thus only a hair line separates science from insanity.

....The *Chronique de l'An 1911*, signed by "Mermeix" and published at Paris by Bernard Grasset (3 fr. 50), contains "a record of the Official Negotiations and of the Secret Negotiations regarding Morocco and the Congo." Information nowhere else available is to be found here. The negotiations and foreign relations account for only 350 pages of the 500 which this book contains. The story of the three French Ministries in office in 1911 (Briand, Monis and Caillaux) is narrated, and the automobile bandits receive due attention, along with "the parent of the *Jeunes Gardes*," M. Gustave Hervé, the anti-militarist, who has not yet finished "doing

time." Syndicalist quarrels, financial questions and the population of France furnish further data. A useful collection of *documents à servir*.

....Home mission week is to be celebrated by the Protestant Churches of America, November 17-24. The committee in charge desires to secure a series of articles on the twelve subjects which are to be presented each week during the three months' preliminary period. Twenty-five dollars will be paid for the best article on each topic. Here are the subjects: The Negro, Spanish-Americans, The New Frontier (the West and the South), The Immigrant, The Problems of Country Life, City Problems, Women and Children in Industry, The Saloon and Temperance Reform, Social Movements Arising Out of Present Day Social Conditions, The Church as a Social Agency, The Church as a Religious Force, The Churches in a Uniformed Program of Advance. These articles are to be used in the religious and daily press and should be written in a popular manner, in not more than fifteen hundred words. They must be submitted before August 1. Full particulars will be furnished by Mr. Charles Stelzle, executive secretary, 156 Fifth avenue, New York.

....We recently commented upon the death of August Strindberg. Here is what Georg Brandes writes of him:

"He appeared, like Tolstoy in Russia, first of all an avowed descendant of Rousseau. Sprung from the lower classes like Jean-Jacques, a democrat like him, in his writings eloquent with passion like him, stricken also like him with the obsession of persecution, where his works penetrated, he agitated souls in the same manner as Rousseau.

"The labyrinths of our being, we find them to the full in the enormous work of Strindberg. But he had not the requisites of a guide and a conductor. He was no master in the difficult art of living, for there was not one Strindberg, but several, and they confronted one another in the postures of combatants."

Maxim Gorky, too, has given expression to his view of the distinguished Swede, who was, he writes, "the nearest to me of all European literature," and "the poet who had the strongest action" upon his thoughts and sentiments. His books awakened the desire to contest, to contradict; yet they increased the reader's esteem and friendship for their author. Gorky was often irritated by Strindberg's attitude toward woman, yet "knows not of a writer in Europe who has said more true things about woman." Gerhardt Hauptmann's tribute to Strindberg opens with the assertion that he was one of the most striking personalities of our era: "poet, seeker of truth, skeptic, and man of belief!" Another German—the critic Strecker—declares:

"August Strindberg is another great poem of 'Faust' in European literature, only he did not create it in his works, but in his life."

Pebbles

"RAGTIME is dying out," says a musical journal. If so, it is dying a horrible and lingering death.—*Logan (W. V.) Banner*.

BANK PRESIDENT.—But why do you wish to work in a bank?

Serious Youth.—I believe there's money in it.—*The Wall Street Journal*.

HE.—Does your father object to my staying so late?

She.—No; he says it serves me right for being in when you call.—*Boston Transcript*.

LARRY.—I like Professor Whatshisname in Shakespeare. He brings things home to you that you never saw before.

Harry.—Huh, I've got a laundryman as good as that.—*Dartmouth Jack-O'Lantern*.

VON BÜLOW said of a certain pianist: "He has a technic which enables him to overcome the simplest passages with the greatest difficulty."—*Youth's Companion*.

THE following paper was read at a recent convention of doctors at Atlantic City: "The Uses of High-Frequency Desiccation, Fulguration and Thermoidadiotherapy in Therapeutics."—*The Medical Journal*.

DOROTHEA.—What were you doing after the accident?

Herbert.—Scraping up an acquaintance.—*Harvard Lampoon*.

STUDE.—Is it possible to confide a secret to you?

Friend.—Certainly. I will be as silent as the grave.

Stude.—Well, then, I have a pressing need for two bucks.

Friend.—Do not worry. It is as if I had heard nothing.—*Michigan Gargoyle*.

A BIRD dog belonging to a man in Mulvane disappeared last week. The owner put this "ad" in the paper and insisted that it be printed exactly as he wrote it:

LOST OR RUN AWAY—One livver cul-ered burd dog called Jim. Will show signs of hyderfobby in about three days.

The dog came home the following day.—*Kansas City Star*.

It was a faithful Swede girl who, when the winter was coldest and the furnace was not working right, was admonished by her mistress to take an iron to bed with her to warm it. In the morning, the kindly woman asked Lena how it worked.

"Pretty gude," she said. "Ah had it almost warm by morning."—*The Argonaut*.

It was a Washington woman, angry because the authorities had closed the woman's restroom in the Senate office building, who burst out:

"It is almost as if the Senate had hurled its glove into the teeth of the advancing wave that is sounding the clarion of equal rights."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Mr. Taft and Mr. Roosevelt

We have held that Mr. Taft deserved and was fairly entitled to a renomination. We predicted in April last that it would be given to him on the first ballot. He has been renominated, after a contest—preceding the convention and during its sessions—of unprecedented bitterness, and Mr. Roosevelt, who sought to displace him, in the rage of sharp disappointment turns from the party that made him Governor of New York and President, to build up a new party of which he shall be the head. The ex-President had been misled by overconfidence. Only three weeks ago, at Dennison, Ohio, he said, when the selection of a compromise candidate was suggested:

"I will name the compromise candidate. He will be me. I stand for myself as the original candidate and the compromise candidate. And as for the platform, we will accept a compromise by taking the whole of it."

But that was not to be. The convention made its platform without seeking his aid or approval, and nominated the man of whom he said only three and a half years ago:

"I do not believe there can be found in the whole country a man so well fitted to be Pres-

ident. He is not only absolutely fearless, disinterested and upright, but he has the widest acquaintance with the nation's needs, without and within, and the broadest sympathies with all our citizens. He would be as emphatically a President of the plain people as Lincoln, and yet not Lincoln himself would be freer from the least taint of demagoguery.

"To permit the direction of our public affairs to fall alternately into the hands of revolutionaries and reactionaries, of the extreme radicals of unrest and of the bigoted conservatives who recognize no wrongs to remedy, would merely mean that the nation had embarked on a feverish course of violent oscillation which would be fraught with great temporary trouble, and would produce no adequate good in the end.

"The true friend of reform, the true foe of abuses, is the man who steadily perseveres in righting wrongs, in warring against abuses, but whose character and training are such that he never promises what he cannot perform, that he always a little more than makes good what he does promise, and that, while steadily advancing, he never permits himself to be led into foolish excesses which would damage the very cause he champions.

"In Mr. Taft we have a man who combines all these qualities to a degree which no other man in our public life since the Civil War has surpassed."

In three and a half years Mr. Taft has not become a bad man. But when Mr. Roosevelt saw that the President was not inclined to make way for him he began to attack, misrepresent and abuse the man he had so warmly commended. That was the beginning of the deplorable controversy which was interrupted, if not ended, by the action of the convention on Saturday last, a controversy in which Mr. Roosevelt has denounced his old friend as the consenting tool of corrupt men, a promoter and beneficiary of fraud, a hypocrite and a liar.

Mr. Taft has been a good President. He is a Progressive and not a reactionary. Many of his acts and opinions might be cited in support of this assertion. We have spoken of them heretofore, and now we mention only two—his repeated recommendation that all the prominent local Federal officers be placed under the merit rules of the civil service, and his memorable peace treaties. Mr. Roosevelt should have supported and aided him. Even at Chicago he might well have consented to the nomination of Governor Hadley, or Senator Borah, or Senator Cummins for the second place on the Taft ticket. But he had himself too much in mind. His friends are seek-

ing a name for the new political organization they intend to form. It should be called the Roosevelt party.

Let us see what the platform of this party is to be. If Mr. Roosevelt is to be the party's candidate—and he has accepted a nomination from the bolting or silently protesting delegates—the first paragraph must approve a third term. This will repel some who might be drawn into the movement by other considerations. There will follow Mr. Roosevelt's project for the recall of court decisions as to important constitutional questions by a majority vote at the polls. In our judgment this project is decidedly a reactionary one, but Mr. Roosevelt has laid great emphasis on it.

Warrant for the bolt is found in the charge that he was cheated out of a regular nomination by the National committee, and protest against this alleged robbery must have a prominent place in the new platform. But such a charge, even if well founded, is not one that appeals with force to many of those voters, Republicans or Democrats, in all parts of the country, whose support the organizers of the new party will seek. And how will Mr. Roosevelt explain why his claim, in the contest controversy, was reduced from 254 seats to 92, then to 72, and finally to 48? What will he say about the flimsy contests made in the South by his agent, McHarg, and how will the new platform account for the fact that with respect to nine-tenths of all the contests the votes of all his own friends in the National committee were cast against him? These contests, decided for Mr. Taft by unanimous vote, included those in Indiana, where, according to Mr. Roosevelt's written statement, "the Taft delegates" represented "absolutely nothing but fraud as vulgar, as brazen and as cynically open as any ever committed by the Tweed regime in New York forty-odd years ago." His loyal friends in the committee did not think so. And their votes were cast in the same way with respect to those "early" Southern McHarg contests, which, one of the Roosevelt papers recently remarked, were "started for psychological effect, as a move in practical politics, in order that a tabulation of delegate strength could be put out that would show Roosevelt holding a good hand in

the game." We are not saying that every one of the committee's decisions would be sustained by a strictly just legal tribunal, but we cannot think that on the whole the theft assertion will have much weight or drawing force in a party platform. Besides, some might want to know how the committee's steam roller was used in 1908 by Mr. Roosevelt and his political associates.

Other parts of the platform were suggested by Mr. Roosevelt last Saturday night in general terms. One was that the people have the right to rule themselves and should so rule as to obtain both political and industrial justice. Bosses (William Flinn and certain others excepted) must be put down. There must be no stealing. The new party will stand for honesty and fair play (even when misrepresentation is disclosed by the publication of letters about reciprocity and Lorimer), and for a square deal, which Mr. Taft thinks has not been given to him by the ex-President. Much room is left for elaboration and specification at the time of the mass convention, which is to be held a few weeks hence.

We deeply regret this division of the Republican party, but we are glad that Mr. Taft was nominated. We believed, as we said some time ago, that it was his duty to persist in his candidacy. The course and character of the canvass were such that the nomination of Mr. Roosevelt would have been something to be deplored. What the effect of his secession will be cannot now be foreseen. In all probability he will not be elected President. He may have the gratification of keeping President Taft from being re-elected, but he cannot wreck the Republican party. It is to be hoped that the Democratic Convention will act wisely.

The Republican Platform

It is not unfair to call the Republican platform a colorless document. It abounds in generalities, dwells on the glorious record of the past, declares it the policy of the party to benefit everybody, and it finds no evils to be remedied. It offends nobody, except those who have a reform to be achieved or a wrong to be condemned and ended. It thus lacks the note of courage, the outlook into the future, which attracts eager

followers. Its merit is the negative one of saying very little that is bad. Its self-gratulation begins with Abraham Lincoln—for it could go no further back—and it even points with pride to the resumption of specie payment, which is, like oxtail soup, going pretty far back for something good.

We have great difficulty in discovering any definite doctrine which will separate it from that of the Democratic party. To be sure, it asks for a continued protective policy, but it then goes on to tell us that we have too much protection now, and that, with information given by a tariff commission, it should be reduced. The Constitution is defended, the courts supported, the recall of judges condemned, crimes of selfish monopolies stigmatized as "abhorrent," the definition of offenses under the Sherman anti-trust law is favored, the increased cost of living deplored, peace and arbitration approved, the civil service law commended, campaign contributions should be made public, natural resources conserved, protection against Mississippi floods provided for, and everything else that everybody agrees to.

But there are one or two good things that are not perfunctorily good. The Democratic party in the House is rebuked for not having provided for two battleships. The plank on immigration can be interpreted as you please, but it is meant to squint at the restriction of immigration. When it calls for "laws to give relief from the constantly growing evil of induced or undesirable immigration which is inimical to the progress and welfare of the people of the United States," it is meant to be understood that poor competing working people should be excluded, which is a bad and ungenerous policy. We are glad that the parcels post system is approved, and a pension system for civil servants.

The omissions are very notable. On the initiative and referendum there is not a word. While the recall of judges is opposed quite properly, there is silence on the recall of members of the legislative or executive departments. There is equal silence on public education. Of the policy prevalent in so many Democratic States, which frankly excludes as many colored people from

the ballot as possible, a shameful injustice, we could not have hoped that a word would be said. No party cares to speak for the negro nowadays. Silence is the best that can be hoped for.

It is not a progressive platform; it is not a platform that has any definite value. But why dwell further on the platform? Platforms do not count nowadays; it is men that tell. Taft is his own platform, as Roosevelt is his. This platform is three columns of words. When we speak of progressiveness, our most ardent radical Progressives of both parties are miles behind the Liberals of Great Britain.

Justice Hughes's Refusal

THE Presidency of the United States is not an honor to be lightly esteemed or declined; neither is a nomination to that office; yet Justice Hughes positively refused to allow his name to be presented as a candidate, and made his refusal so emphatic as to indicate that he would not serve if elected. To say No and mean Yes comes natural to women, we have been told, and it is a familiar device with aspirants to office, when they think the hour is not yet ripe to put their names in the hands of their friends. Justice Hughes made it plain that he meant what he said.

It is his reasons that concern us. He does not disdain the honor, but he does not think it right to be a candidate. It is conscience, a patriotic conscience, or a conscientious patriotism, that forbids him.

Thru a friend, Rabbi Stephen S. Wise, he announces his doctrine of duty. Mr. Hughes is a member of the Supreme Court of the United States. It is the duty of the Supreme Court to give decisions, it may be very important decisions, on national legislation that has been favored by one party and opposed by another. Many laws have partisan support. Policies for legislation are urged in one party platform and denounced in another. It may become the duty of the Supreme Court, as in the case of the Income Tax Law, to decide whether it is constitutional, and the decision will please one party and displease the other. If a justice were a receptive candidate for nomination to the Presi-

dency any decision of his in such a case would be suspected as warped by his desire for nomination. It is the business of a justice of the Supreme Court, in Mr. Hughes's view, to discharge himself of all political bias in his decisions; and what political bias is so seductive and dangerous as the ambitious hankering for office? Accordingly, when Mr. Hughes accepted a place on the bench he put all political aspiration behind him. He was no longer a partisan; he was the impartial judge, equally ready to see the evidence on both sides and to decide with absolute indifference to party success.

The Supreme Court, in the view of Justice Hughes, must not be dragged into politics. Not only must not its members stain its pure honor, but the people must not either assail or tempt it. It must not be said that the Supreme Court belongs to one party, so that one party shall be its supporter and the other its denouncer. Its decisions should remain, as they have been, final, and not become the subject of factional strife. The Supreme Court is the last, solid, permanent foundation on which our government rests. Nothing should endanger its credit; and its credit will be endangered if its members maintain partisan attachments and foster political ambitions.

These are reasons enough why a member of the Supreme Court should fling all further ambition behind him. Any other lawyer may be a legislator or a President, but not so the man who sits in our highest court of justice. So says Justice Hughes, and we honor him for it. His example has laid down a law which for all time his associates and successors must follow. They will not dare to do otherwise. This is a step in advance from which our nation will not go backward. We recall that Salmon P. Chase, after long service in political life, was in 1864 made Chief Justice of the Supreme Court, but a possible Presidency still dangled before his eyes. Justice David Davis allowed himself to be nominated for the Presidency by a minor party, and resigned from the bench to be Senator from Illinois. Thanks to Justice Hughes, hereafter no party will dare to tempt a member of that court. It must remain—the people

will have it remain—unassailable and sacred.

But this principle thus settled for the Supreme Court of the United States raises important questions as to its application elsewhere. How is it with the Supreme and Appellate Courts of the States? We know that in our large cities judgeships in their courts have been political plunder, portioned out to henchmen or to those who would pay the price demanded; and it is not strange that such courts have been sullied and discredited. The evil has been at times appalling. But the higher State courts, even when the judges have been elective, have generally been held in honor, and the effort has been made to keep them free from political scandal. Yet the principle does apply to them. Any man appointed or elected a judge should keep out of politics. He should not resign his judicial office to take a higher political office. It would be a perfectly parallel case to that of Justice Hughes if any member of the Supreme Court of a State were asked to stand for Governor or Senator, or, we will say, President. And this we say keeping in mind that Alton B. Parker was Chief Justice of the Court of Appeals of New York State when he resigned to accept the nomination of his party for the Presidency in 1904; and that Senator O'Gorman and Mayor Gaynor left the State Supreme Court to accept the elective offices they hold. Judge Taft had been for years out of judicial service when he was nominated for the Presidency; and Chief Justice Simeon E. Baldwin was retired for age before he was elected Governor of Connecticut. No stain attaches to their later political activity. Justice Hughes's plain statement of the high principle involved will smirch the record of any subsequent jurist who fails to obey it.

The New Party

MORE speedily than was expected—very suddenly, indeed—with no antecedent consultation and agreement, at the simple behest, we might say, of Theodore Roosevelt, the new Roosevelt party has been declared, much as a nation declares war at the bidding of its

king. His followers believed, for so he had indicated, that they were to go home, take counsel, and later in the summer meet to organize their party if thought wise; but he called his followers together, address them, and lo! the party, the National Progressive party, was born.

If it were the purpose of Mr. Roosevelt from the beginning to split the Republican party and inaugurate a new party on avowedly progressive lines he could hardly have done the work more skilfully. For months he had denounced the President of the United States and his supporters as mossbacks or worse, and himself as the representative of all that is progressive. He appealed to a superior moral conscience which he assumed that he and his adherents possessed, and he took the fullest advantage of whatever tactical blunders President Taft had been guilty. He excused or condoned nothing. He then attempted to control the nominating convention. The progressive spirit in the West was greatly to his advantage, and with abundant money provided by wealthy men he fought the primaries and captured State after State. Not content with this, he sent agents to create contests in States where Taft delegates had been lawfully appointed, and claimed them as regular. The fact that his own representatives on the National Committee agreed with the Taft members to throw over most of these contestants proves that the contests were fraudulent, and casts much suspicion on the others. So far as we can see, there is not one of the cases, not even that in California, in which quite as good an argument at least could not be made for the Taft men admitted as for the Roosevelt men excluded. But Mr. Roosevelt and his supporters cried Fraud so loudly and persistently, while no less guilty of it, that half the country believes that there had been barefaced robbery, piracy, or any other bad word that could be uttered. On the cry of Fraud the Roosevelt men withdrew, and thus broke up the Republican party. A very shrewd scheme it was, and Mr. Roosevelt's address to his delegates on their withdrawal from the convention was extremely able and effective. Let us consider it to have been his plan from the beginning to put himself at the head

of a new party, and then his course has been amazingly shrewd and deep. It shows none of that insanity which his enemies have imagined to affect him; and if he is mad with conceit, he has been able to persuade his followers to take him at his own valuation.

Never has a political party started with such strength as this promises to show. The Republican party grew by gradual accretions, having begun as the Liberty party, then as the Free Soil, and finally attained power as the Republican. The minor parties, Knownothing, Temperance, Populist, all started small and gained a certain strength. But it looks as if the Progressive party were beginning strong, controlling important States and commanding unlimited backing in money from men of great wealth. The Taft wing of the Republican party had in the convention the Southern States, which it could never carry and in which it could get few votes, while strong Republican States were in the Roosevelt column, and their delegates have deserted the old party for the new. Whether they can carry their people at home we cannot tell, but they believe they can. In that case we do not see why they may not control as many votes, and carry as many members into the Electoral College, as can the Republican party with its candidate. The Republican party has suffered a serious and possibly fatal blow.

A new alignment of parties may be necessary. It has been anticipated for some time when it has been observed that there have been no moral principles, and none of any other kind, to separate one party from the other. The old Republican party that elected Lincoln had principles. It forbade the extension of slavery, and in war it abolished it; and then it spent years in the attempt to reorganize government in the seceding States on the basis that all men were free and equal. But when it seemed necessary, under President Hayes, to leave the protection, or suppression, of the negroes to the States, the Republican party ceased to take any more interest in the care of them. Meanwhile the debt caused by the war required a heavy income, and the party put heavy protective duties into its platform. Soon protection became the party's chief political asset,

money instead of principle, and in a measure, to a degree greatly exaggerated by partisans of the other side, the high tariff favored wealth, and the Republican party came to be called the party of millionaires, altho huge fortunes were equally amassed by railroad kings, gold kings and mining kings of both parties; but the talk of the tariff by the Democrats, who wanted it just the same for cotton and sugar, and the talk about bosses, found in both parties, helped the charge that the Republican party was the party of privilege. Mr. Roosevelt from within the party has talked much in a general way of injustice and privilege, while avoiding the tariff, and has demanded more loudly than others the "rights of the people," and has become the idol of a multitude of those who call for progressive measures which are being adopted by all parties. The party which he has created comes thus into being full grown, and for aught we can judge, may carry as many States as the party from which it has broken off. Perhaps it is time for a new division of parties; but we fail to see how they can be aligned, for no party will care to oppose the Ten Commandments, or to object to popular rule, and the direct primary, and the suppression of corrupt bossdom. At any rate, the Republican party, whose special ethical purpose ended thirty years ago, seems to have suffered a severe blow, and may possibly be defeated by a party which has maintained its unity from the beginning, and has never had any ethical purpose to illuminate its history. The new party will make a strong appeal to the Southern Populists, and, if it can recall them from their submission to the Democratic party, it will achieve a real good in breaking up the solid South and splitting the party which has ruled there so long. We have no fear of a sectional party division between East and West, such as we have had between North and South.

The Methodist Superannuate

FROM time to time THE INDEPENDENT has published chapters from the life of a minister in the Southern Methodist Itinerancy. It has been like the autobiography of a poor old saint, whose riches

consisted in an artless cheerfulness and hopes based upon the rate of five cents each, three for ten cents. In his first "Story of a Handicapped Life," he showed how a man could say his prayers, eat a bowl of oatmeal for breakfast, labor in the vineyard of the Lord all day on a salary that averaged less than twenty-five cents each for the members of his family, and still be able to educate his children, love his neighbors better than himself, and believe in the goodness of God in spite of the bishops. He did it by faith. He wore the sun-smile of the heavens upon his blind face and saw himself surrounded by a cloud of immortal witnesses. In this first story he conveyed the impression of a sublime content, founded upon that remarkable verse in Hebrews which, besides being a definition of faith, is also an excellent definition of the imagination. "Faith is the substance of things hoped for, the evidence of things not seen." This man lived upon the substance of his hopes. He had a bank account which enabled him to draw magnificently on the mere evidence of things unseen. There is no substance like this for making a holy man, no other bank account large enough to meet his tremendous demands. He lived upon the goodness of God, not merely upon his porridge. It is the most wonderful diet in the world, preserving both body and soul. Yet there are fools who say in their hearts that there is no God!

But there came a change. The road of life goes astonishingly up and down. It is the way the Lord has of developing the spiritual traveling powers of his saints, or of giving sinners another chance to mend their gait. If you are poor, you can become poorer. If you are good, you may become better. It all depends upon the spirit with which you gird up your loins. Still, the change of direction involves a shock. It was a trying time for this preacher when he was superannuated. He had to cut down his allowance of porridge. He had less *things* to hope for. The evidence of things as yet unseen turned out to be greater hardships when he was older and deprived of his vocation. When an itinerant is superannuated from the Methodist ministry he receives nothing upon which to live until the end of the first

year. It is that period in his life when a great and rich Church leaves him to be fed by the ravens or by such manna as God may provide, and it is to the credit of our Heavenly Father that He usually sends it in one form or another. There is not yet any case on record of a Methodist preacher's having actually starved to death during this awful time of privation. Few of them have anything laid by. And many of them do suffer for the need of nourishing food until they become dolorous and sour as Job on his dunghill. You cannot praise God properly, and love your neighbor, and keep all ten of the commandments with youthful courage and vigorous piety when you are obliged to eat just a little in order to make that little hold out till conference meets. A good many of the old preachers get critical of their brethren and fractious and carping because they need a little good wine for their stomachs' sake. They become sly mendicants, they put up a poor mouth, because it is the only way to increase their allowance from the superannuate fund. But their simple, childish, pitiful chicanery does not always serve. The men that distribute this fund are accustomed to wink and laugh and wag their heads as much as to say they "understand"! Rumor tells of a case in the same conference to which this itinerant belongs of another superannuate whose wife and four children were starving on charity, when a member of the board went before it and declared that this superannuate was earning \$1,500 a year on the side. These things happen, the Devil knows why. But they do. And our readers will recall that "My Superannuation," by the minister whom we have under consideration now, was a dolorous tale. He was "in the brush," as the preachers say. We could not be sure that he would hang on to his Hebrews Epistle and still have the immortal courage to be satisfied with that elusive definition of faith. But now, in this present issue, we publish his story of "My First Year Out of the Pastorate," and we are reassured. We need not be ashamed of him. He is game. He is old and nearly blind and poor. He has lost his job. He has failed in his Church business. He is no longer on the 'Charge—a back number. But ob-

serve, he has laid his tail over the dashboard of adverse fortune, he has taken the bit between his teeth, and he is making a neck and neck raw-boned race straight into the Kingdom of Heaven. You may laugh, of course. It is ludicrous, his little ways and means of living and praying and believing. But if it is just funny to you, that is because you do not understand this inspiring business of living upon the substance of things hoped for. It can be done. And there is somewhere in Heaven a grand stand filled with grave old "fan" angels whose business it is to cheer these old racers on over the last stretch of the course. And they will win the right stake. Most of them will die of anemia and of hardships. But they will be fat saints in the next world, where some of the prelates may be significantly lean.

Meanwhile, what shall we say of a Church that sends over seven hundred thousand dollars to aggravate and educate the heathens, and leaves less than half a thousand old preachers, who have given their lives and strength and faith in the service of a religious organization, to suffer in their helpless old age the keenest and most humiliating privations? Just this: The world is full at the present time of different Churches of man, conducted more or less like other secular institutions, which discard the feeble and infirm. But when the Church of God is founded, we shall see a difference. A good many heathens may be compelled to defer their entrance into the denominational faith till they live again, but not so many old preachers will die begging and grumbling.

Rousseau in 1912

ACCORDING to the Book of Genesis, man sinned in the person of Adam, and has been, or should have been, making atonement ever since. Jean-Jacques Rousseau was far from being an orthodox Calvinist, in spite of being born in Geneva, but he followed the Bible in so far as he preached that the "natural" man was virtuous. The sin came in according to his teaching, not in the Garden of Eden, but when man became a sophisticated and complex social being. Virtue was to be regained in a return to

nature. Just what "nature" is Rousseau never explained to the satisfaction of the critical mind any more satisfactorily than what he meant by the "virtue" he praised and never practised.

This year marks the bicentenary of Rousseau's birth. The event is being violently celebrated in France, for by adoption the Genevan became French. No one born in the eighteenth century, in or out of France, is a greater ancestor than Jean-Jacques Rousseau. His enemies blame nineteenth century romanticism on him, and even his friends credit him with it. His enemies saddle him with the *mal du siècle*—whatever that means; his friends hail in him the founder of modern social and political institutions. Great is the Ego, and Jean-Jacques is its Prophet!

Modern expositors of the philosophy of egoism—M. Felix le Dantec, of the Sorbonne, will serve as an example—are, however, as far from adopting Jean-Jacques's conception of a virtuous "natural man" as they are from accepting Genesis for scientific history. Instead, they are evolutionists. In modern man they see the developed (but scarcely transmuted) brute. They are egoists precisely because they conceive of his instinct of self-conservation—in short, his selfish instincts—as the basis of success and the base of character. Altruism is a diaphanous robe which the brute wears for embellishment or self-deception.

The greatness of Rousseau, whose birthday is to be celebrated by French radicals on June 28—with blare of trumpets and unveiling of monuments—must be sought, not in his originality or philosophy (a very web of inconsistencies), but in his eloquence and actual influence. Rousseau is, even today, a force in politics—where he is cited in advocacy of liberal principles; in economics—where those who profess his teachings demand the recognition of the social rights of man; in education—where the pure elective system, now rather under a cloud, represents his standpoint as author of "Emile." In character no one could be farther from Jean-Jacques than Charles William Eliot, president-emeritus of Harvard University. In educational theory, Dr. Eliot is scarcely less a disciple

of Rousseau than was Froebel himself. This has been pointed out by a member of Dr. Eliot's own faculty, Prof. Irving Babbitt, in at least one of his trenchant essays.

Jean-Jacques remains a tempting subject for biographer, raconteur, philosophic dabbler and critic. There have been as many books written about him as about William Shakespeare—and his literary influence has been far more potent than Shakespeare's. No wonder he is celebrated in France! The fête of Jeanne d'Arc—her four hundredth—was seized upon by all the royalists in the land and by conservatives generally. That of Jean-Jacques's two hundredth anniversary is the chance of the various branches of radicals and republicans. We do not grudge them their hero. It is worth noting, however, that the conservative qualities of Rousseau have not escaped some of his latter-day judges, M. Edmé Champion, for one. Rousseau limited the application of his more radical doctrines to small and compact nations. Switzerland, the land which produced him, was often in his mind. For more unwieldy bodies politic he preferred the monarchical system like a "rank reactionary." Today, moreover, even the representative system of republicanism is adjudged outmoded by hot-heads; everywhere they demand "direct" democracy. Perhaps Jean-Jacques would sit in the "center" had he lived to be elected to the twentieth century Chamber of Deputies. Who knows? In America, as a member of the Democratic party, he would perhaps prefer Harmon or Underwood to either Bryan or Wilson as candidate for President.

The Loan to China Scarcely any more important news has been flashed across the ocean lately than the announcement that the financiers representing the six Powers have come to an agreement as to the loan to China of \$300,000,000 to finance the new republic while it is organizing the government. At present no measures have been taken to secure a regular source of income for the republic, except from customs; but China is so bound by treaties that no increase from that source is possible so long as the treaties are in force, with

their very low tariffs. The advantage of this new and large loan is in the fact that the six Powers are in it, so that China will not be bound to the feet of either Russia or Japan, both of which Powers have been anxious to maintain and strengthen their hold in Manchuria, and Russia in Mongolia. China needs to pay off her soldiers and to create an army which shall act as a constabulary and be able to put down disorder and robbery, while organizing a treasury system which will bring in an adequate revenue. The loan is a very large one, but China can stand it and needs it, and will be able to repay it under settled conditions.

The main argument for the reissue by the Government of a three-cent piece is that it will be convenient in Cleveland, or in other cities where there is a three-cent fare for the street cars. It is doubtless inconvenient there to keep so many cents on hand for change. It allows a lower unit of price for small purchases, and so may conduce to economy. But we have had experience of two sorts of three-cent pieces, both very inconvenient and confusing, and the public got tired of them, just as a hundred years ago the public rejected the half cent, which is now a numismatist's curiosity, but which some people ask to have restored.

A chief contention of the Roosevelt delegates to the Chicago convention was that delegates seated by the committee on their *prima facie* right, but against whom a contest was raised, were allowed to vote on the claims of their fellows in the same case. Those whose claims were under examination were not allowed, of course, to vote on their own cases; but if none were allowed to vote against whom a contest had been raised, then it would have been possible to raise a contest against everybody, as was done admittedly in a multitude of cases, just to give color to a claim, the contest itself being absolutely dishonest.

The hopelessness of the Republican delegates at Chicago appears in the impossibility of their finding a candidate who was willing to stand for the Vice-Presidency, so that they were compelled to fall back on Mr. Sherman. He rep-

resents just the element in the party which the progressives oppose, and his nomination will win no favor from just the ones who ought to have been won if possible. He rather weakens the ticket. The convention concerned itself rather with destroying Roosevelt than with anything constructive which would strengthen the party.

With the new Progressive party going off in a whoop, what will the La Follette men do? It would seem that they must follow the procession and go with Colonel Roosevelt, or else be taken back into the Taft camp. Mr. Roosevelt invites them, for he says that the new mass convention, to be held in August, will be free to select any candidate, who might be La Follette or Cummins, but certainly would be Roosevelt, who seems to have played politics admirably for his purpose.

The women students have left Wesleyan University in a blaze of glory, every one of the young women having graduated with the high grade of scholarship which admits them into the Phi Beta Kappa ranks, while not a third of the young men reached it. Perhaps it is just as well to have turned the women out of the university, so as to give the young men a chance to seem to have brains as well as arms and legs.

At least this time the negro delegates stood firm and were not purchasable, altho they told of offers of money if they would violate their instructions. They were, as a whole, worthy and intelligent men.

We thank President Taft for vetoing the Army Appropriation bill, simply for the reason that it put in a rider that had no business there. This time the lower House did not intimidate a courageous President.

Texas is doing more than any other Southern State for public education. Last year it built two schoolhouses a day, at a cost of \$3,000,000.

The Chicago convention was rather unconventional.

Trade and Industries

LAST week's market on the New York Stock Exchange was a very dull one, transactions amounting to only 1,265,738 shares. While the dullness was generally ascribed to the political controversy, the effect of that controversy was not depressing, for the market was firm and prices advanced, the net gain for representative railway shares being in the vicinity of $1\frac{1}{2}$ points. For several industries there was a larger addition. There was much underlying strength. We should say that the main cause of this strength and of the advance was the good condition of general business. Said *Dun's Review*:

"Rarely are the reports from leading trade centers in different sections of the country so uniformly satisfactory. In most cases an actual widening demand is noted, and in others there are clear signs of preparation for an active fall trade. Weather is ideally favorable both for wholesale and retail distribution of merchandise and for the growing crops. The crop outlook is increasingly favorable."

The condition of the iron and steel industry was notably encouraging. Nearly the entire capacity of the great companies is employed, the Steel Corporation using 96 per cent., and the independents showing about the same proportion. Deliveries are delayed and prices are advancing. An increased demand for nails, wire, tin plate and structural shapes has been caused by great activity in building operations. In the Pittsburgh district there is an almost unprecedented shortage of labor. Wages were increased last week at several Eastern mines and furnace plants. There is as great activity in the Chicago district. Premiums are paid for immediate delivery.

Promise of a large yield of spring wheat partly or wholly compensates for the winter wheat shortage. The corn acreage is large, but the plants need warmer weather. It appears that the movement for a reduction of cotton acreage by 25 per cent. came to nothing. Last week's *Financial Chronicle* report indicated a reduction of only a little

more than one-half of 1 per cent. Prices have not been depressed so much as some expected, and those ruling now are quite remunerative to the planter. Interest and dividend payments for July 1 will amount to \$256,810,000, against \$224,589,000 one year ago. Our foreign trade for eleven months shows an increase of about $8\frac{1}{2}$ per cent., evenly divided between exports and imports. Prominent bankers who have recently made extended inquiry speak optimistically of conditions and prospects. The political situation is by no means satisfactory, but thus far general trade does not appear to have been affected by it.

.... Nearly 30 per cent. of the world's railway mileage is now operated by governments.

.... A new low record for the price of British consols was made last week, when there were sales at $75\frac{7}{8}$. At the same time French rentes were within $\frac{1}{8}$ of the low record of twenty-two years, and a new low record for German Imperial 3 per cents was made.

.... In celebration of the 100th anniversary of the founding of the National City Bank, James Stillman, chairman of the board, and for many years president, cabled from Paris a gift of \$100,000 for the use of the bank's employees. The directors added \$100,000 from the surplus, and the entire fund, now amounting to \$225,000, is held for the benefit of an association of the employees which has rooms in the bank building.

.... O. H. Cheney, vice-president (former Superintendent of Banks) has been elected president of the Pacific Bank. During the administration of Clark Williams as Superintendent of Banks Mr. Cheney was his chief assistant, and he did effective work during the panic period of 1907. He is a lawyer by profession. The Pacific Bank is one of the oldest clearing house institutions having been organized in 1850. Its capital and surplus amount to \$1,400,000.
